

DO WE NEED A VACCINATION AGAINST CORONAVIRUS?

Vaccination is the most effective and cost-effective means of protection against infectious diseases known to modern medicine.

Coronavirus is a respiratory virus. It is transmitted mainly by airborne droplets from the respiratory tract of a patient, such as when coughing or sneezing, as well as droplets of saliva or nasal secretions.

Advantages

- Vaccinations are the only way to protect against serious diseases, such as tetanus or polio.
- Even if a vaccinated child gets rubella, for example, the disease will be milder.
- Current vaccines are less toxic than previous generations. Antibiotics, which would have been used to treat pertussis, for example, have many more side effects.
- The mass refusal to vaccinate could trigger epidemics of diseases that everyone has long forgotten about.
- The risk of complications from vaccinations is much lower than the risk of complications from the diseases they protect against.

Disadvantages

- Vaccination reduces a baby's natural immunity to some extent.
- The drug does not give a 100% guarantee that a person will never get sick in the future.

How is the **vaccination** going?

Vaccination is carried out in two stages:

- At the first visit, component 1 of the vaccine is administered.
- After 21 days, the 2nd component is administered. The drug is administered intramuscularly.

What **vaccine** should I be vaccinated with?

There are now three kinds of **vaccines** in Russia:

- 1) «**Sputnik V**» (Gam-Covid-Wak)

- At 100 vaccination centers in city clinics
- In shopping malls and other public places
- Vaccination for people over 18 years of age.

2) "EpiVacCorona"

- At this time, the EpiVac vaccine is out. Vaccination with this vaccine has been suspended. The Ministry of Health of Russia is waiting for the next batch of this vaccine.
- Vaccination of people over 18 years of age.

3) "CoviVac"

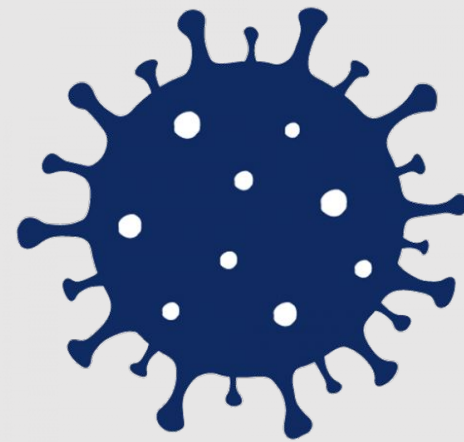

- CoviVac vaccine is not available. Delivery of the drug from the Ministry of Health of Russia is pending.
- Vaccination of people 18-60 years old.

How many people are infected with the **coronavirus**?

The number of people currently **infected** with **covid** is 463,816,202 in the world.

6,065,216 **coronavirus deaths** in the world are recorded.

How many people are infected with the **coronavirus**?

17,449,438 people
infected with **coronavirus**
in Russia

The number of
coronavirus recoveries
is 5,945 people in
Russia.

About 362,478
deaths have been
registered in Russia.

My Opinion

Yes or no to vaccinations? The choice is yours. The main thing is that it should be yours - conscious and voluntary!

And my opinion is: I do not recommend vaccinations, but unfortunately in most cases it is mandatory.
