| BUG LIST | | |
|----------|----------------------|---|
| | Did not find | 1. Misspelled Schedule Recording - Status = Unverified fixed, in test 2. Tomorrow |
| | Fixed | 2. Movies are at the top of the landing page Status = Unverified, fixed, in test 3. |
| | Sometimes Fixed | 3. They are using 24:00 time format and not AM/PM. Status = Unverified, fixed, in test 4. |
| | | Above in testing 2/12/2021 We expect to get fixes for points 1-3 this week, I'll keep you informed. |
| | Sometimes Better | 4. Trick Play does not work. FF and RW are not helpful. One of the problems is the way the FF/RW are implemented. (incremental 2X, 4X, 8X is the normal approach). |
| | | 5. Guide detail data is not available in the EPG. The data presents/is available with unmarked "Arrow Right" found by accident. |
| | ON/OFF per channel | 6. Need to verify that Roku Closed Caption works. (Passed Testing in alpha) |
| | Crashes | 7. New Bug - Navigating down the list shows all 90 channels, navigating only shows only 30. |
| | Fixed | 8. Selecting a channel from the landing page ribbon goes to the EPG no live TV |
| | Sometimes Fixed | 9. ROKU localization - Roku app is not web-based and works with the API directly, without the portal. Status = Unverified. How can we address this in future releases? They need to load the same resource files for menus. |
| | Date/No Day of week. | 11. No catch up TV "Days" option for Roku makes search EPG unpractical. Waiting on confirmation of a fix 4/12/2021 |
| | Not agreed | 12. Replay button rewinds 30 seconds. |
| | No | 13. Turn CC on and off globally |
| | Unknown | 14. Missing Channels due to stream write error |
| | Fixed | 15. Check DVR Record/ Playback |
