

The Tom River Basin

A scenic landscape view of the Tom River Basin. In the foreground, a grassy hillside slopes down towards a large concrete dam. The dam is a long, low structure with a central spillway. Behind the dam, a wide reservoir of water stretches across the middle ground. The far bank of the reservoir is a flat, green plain with some scattered trees and a small building. The sky is bright blue with many white, fluffy clouds. The text 'The Tom River Basin' is overlaid in a large, yellow, serif font, with a small yellow bell icon positioned over the letter 'i' in 'Basin'.

**THE TOM RIVER IS 827
KM LONG AND DRAINS
A WATERSHED AREA OF
62000KM.**

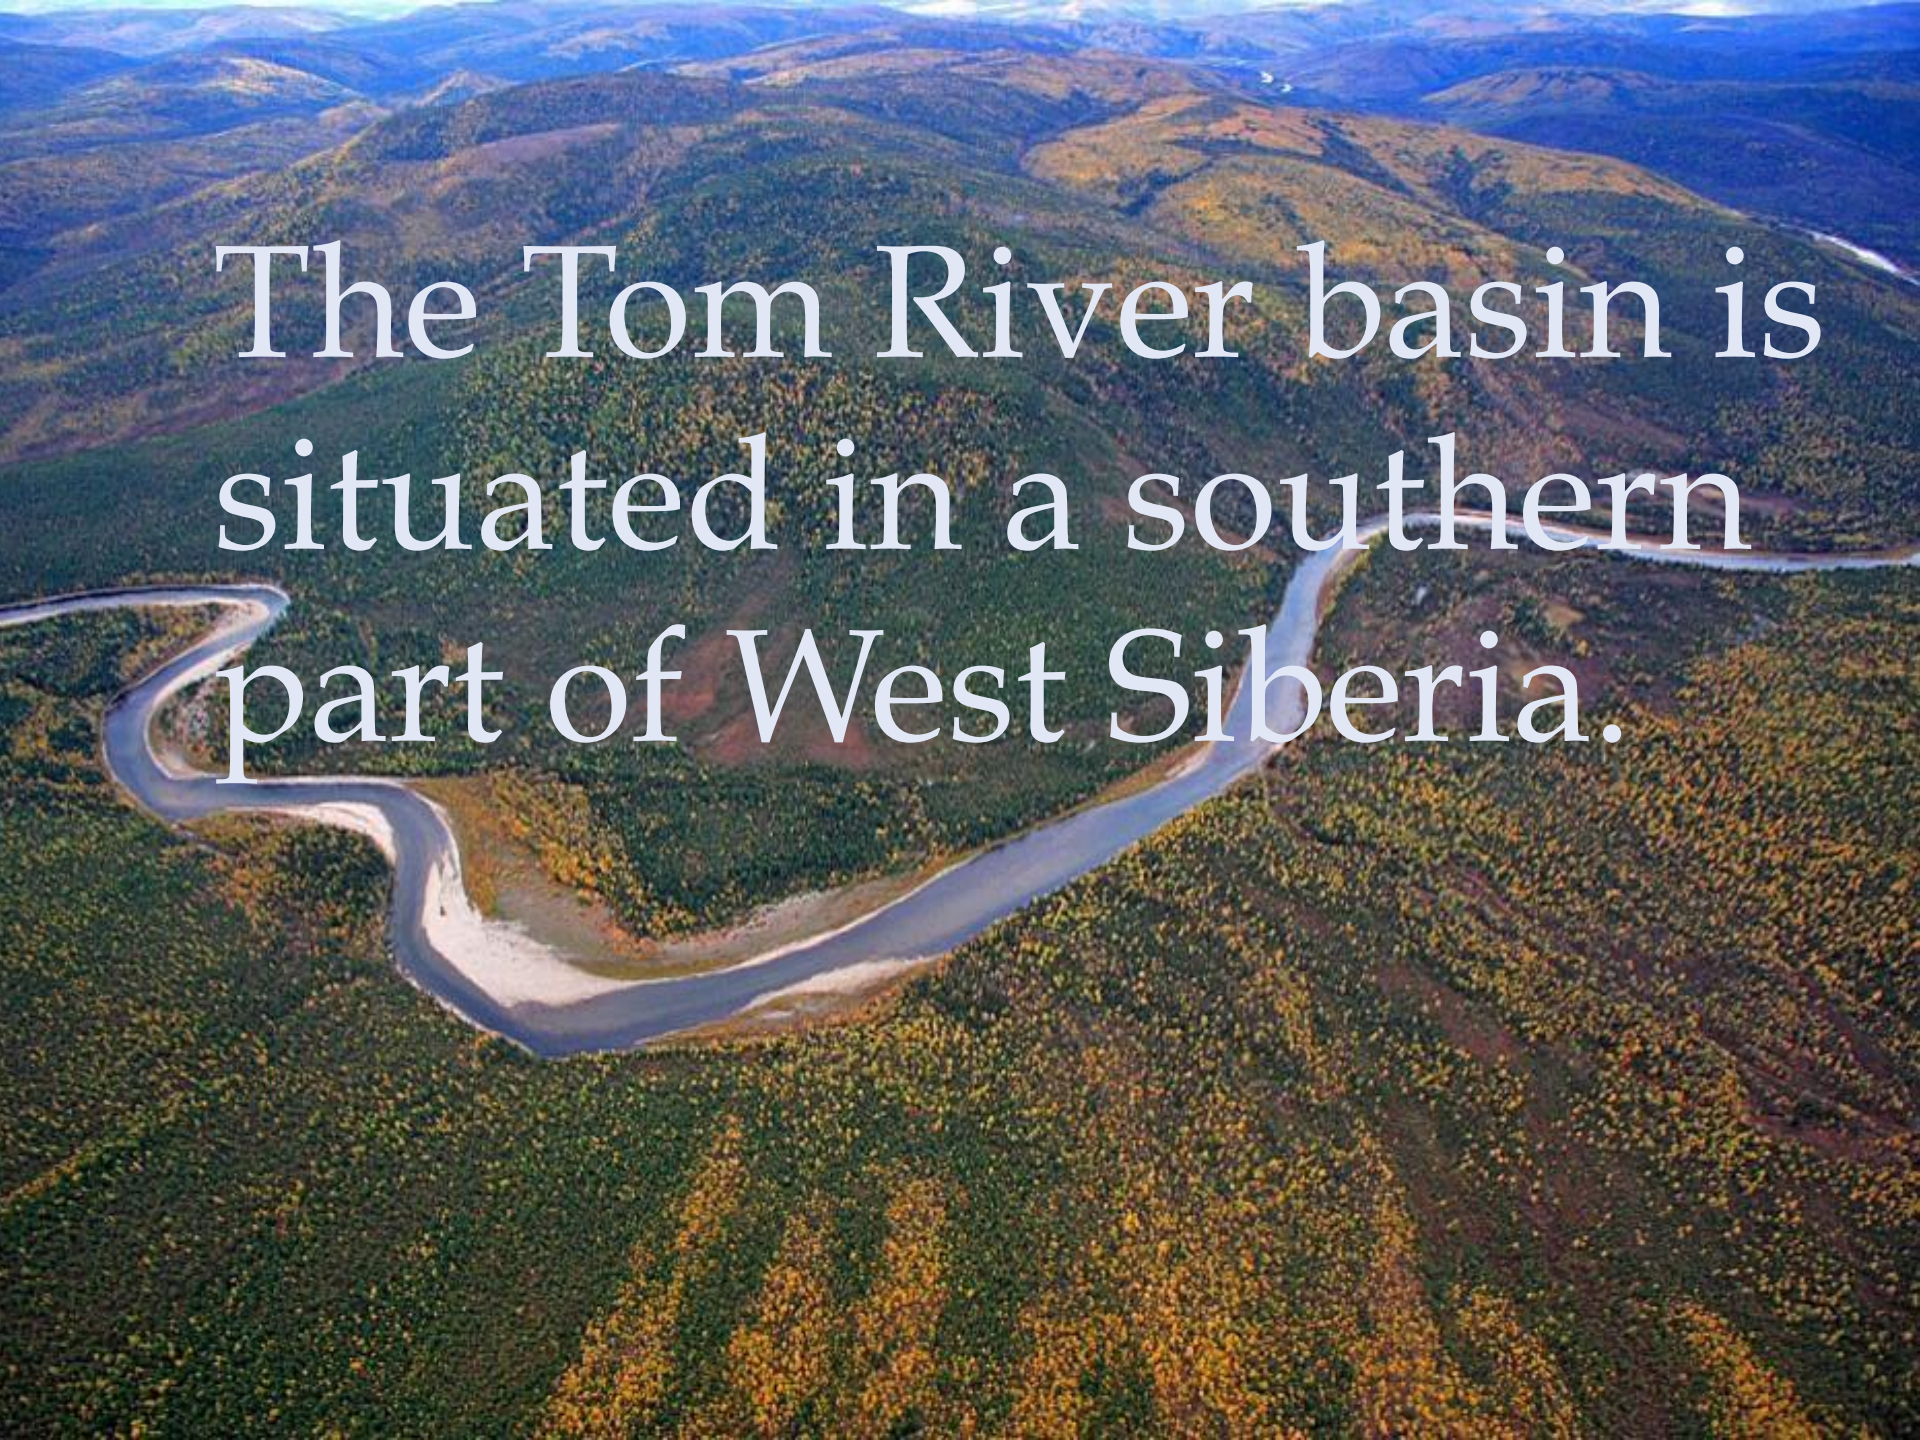

Over 1000 industrial plants and human settlements discharge their wastewaters into the Tom River

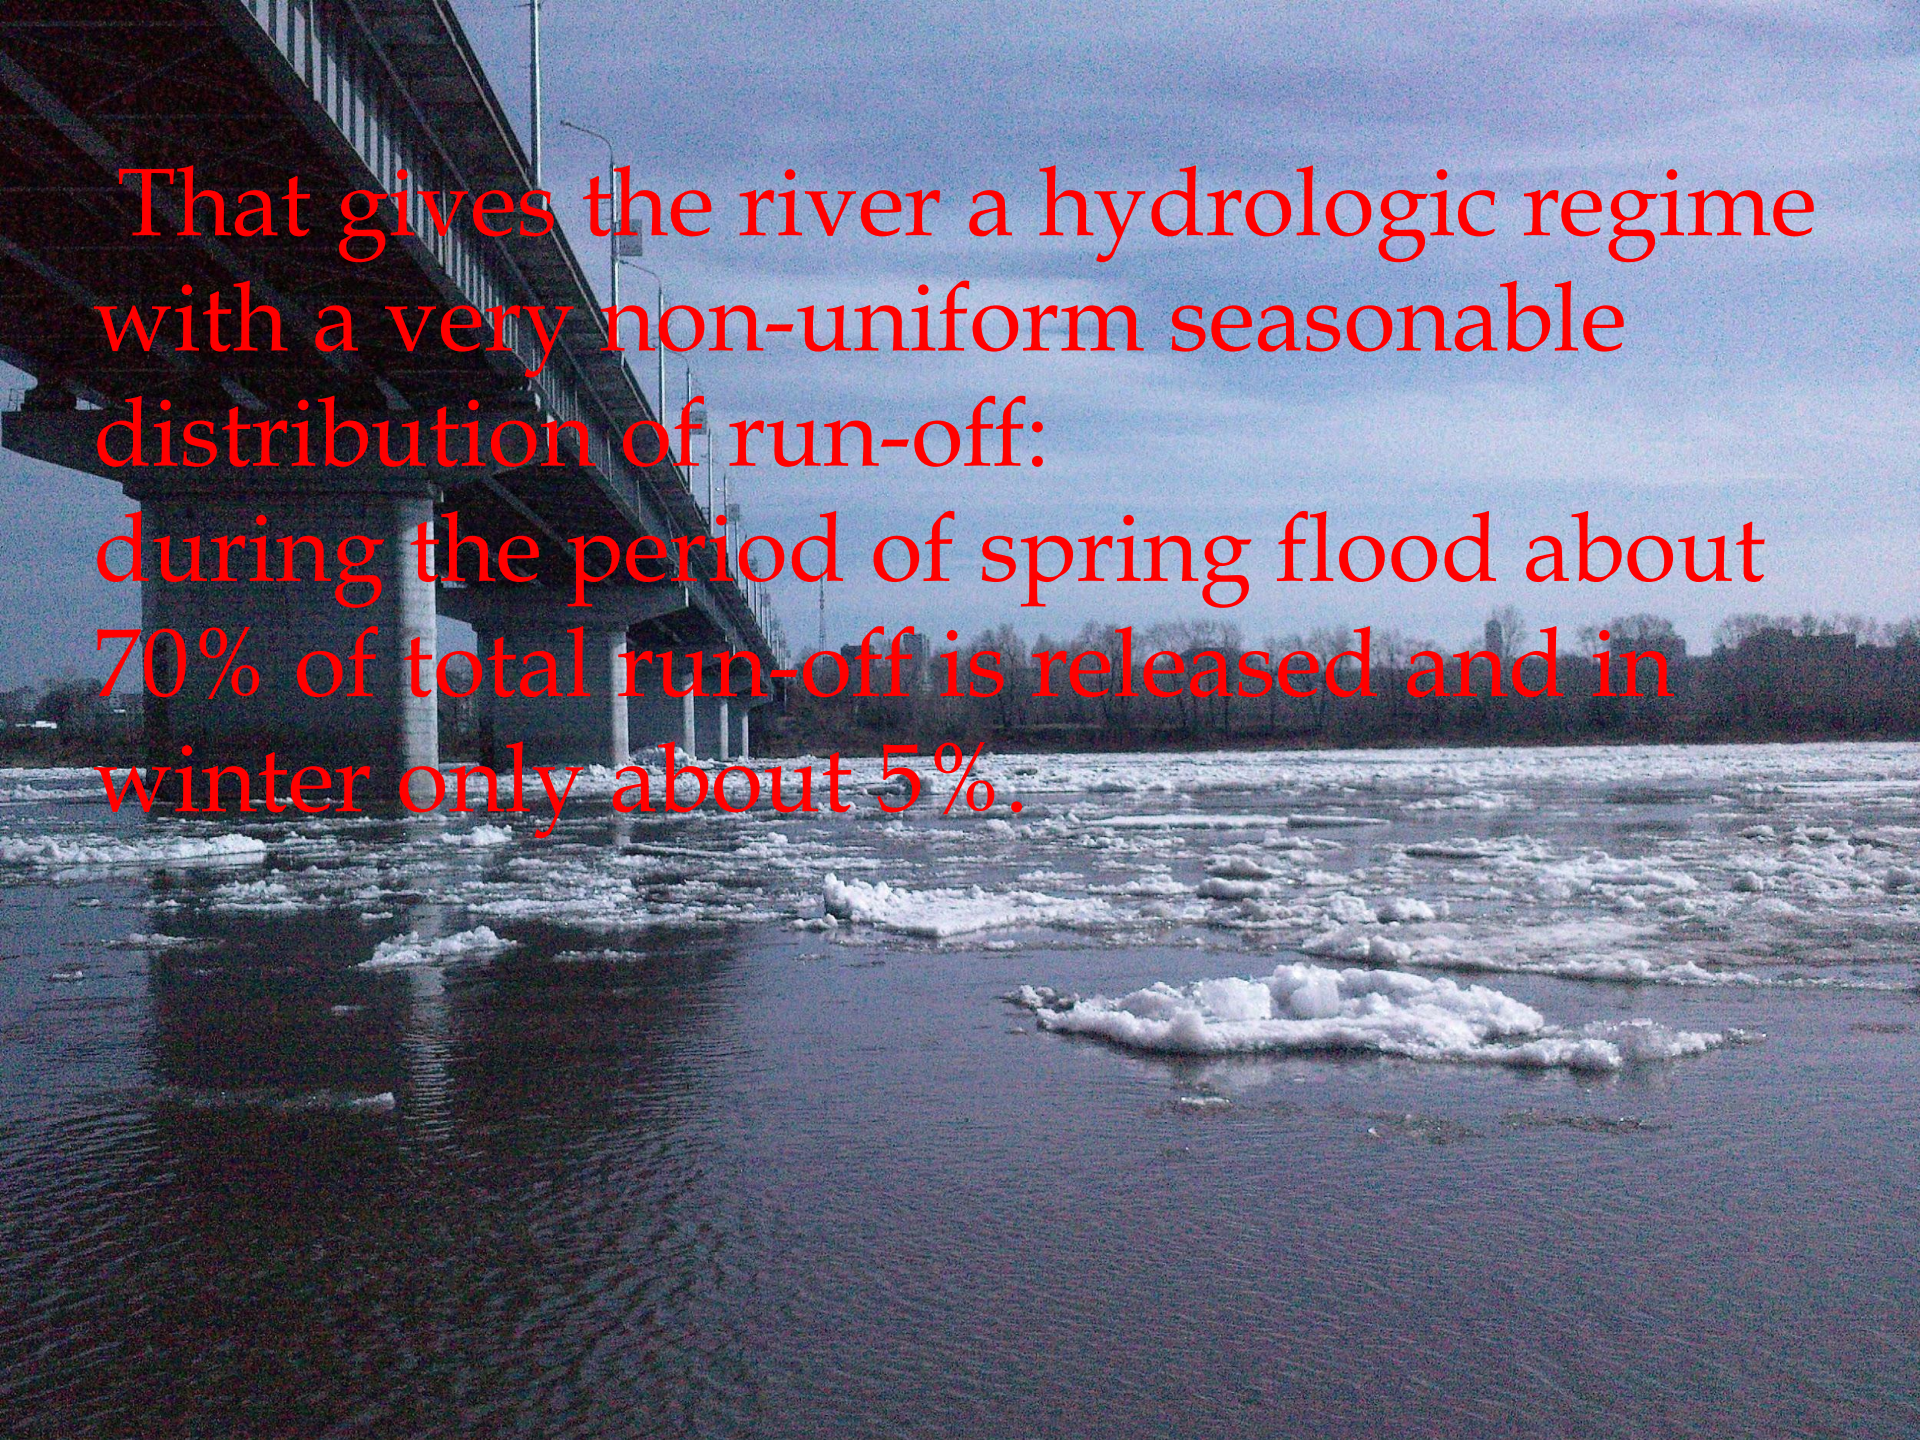

An aerial photograph of a river basin in West Siberia. The river is a prominent feature, winding through a lush, green forested valley. The surrounding landscape is hilly and mountainous, with varying shades of green and brown, suggesting different vegetation and soil types. The sky is clear and blue, providing a bright backdrop for the scene. The text is overlaid in the center of the image, describing the location of the Tom River basin.

The Tom River basin is situated in a southern part of West Siberia.

- 
- A wide-angle photograph of a winter landscape. In the foreground, a snow-covered riverbank leads to a wide, shallow river. The river's surface is partially covered with snow and ice, with some dark patches of water visible. The river flows through a valley. On either side of the river, the hills and mountains are covered in a dense forest of evergreen trees. The mountains in the background are partially covered in snow, and the sky is a pale, clear blue. The overall scene is serene and cold.
- The climate of this area is sharp continental with a long and cold period.

A photograph of a bridge over a river. The bridge is a concrete structure with multiple pillars. The water in the river is dark and has many white ice floes floating on its surface. The sky is overcast and grey. The text is overlaid on the image in a red, serif font.

That gives the river a hydrologic regime with a very non-uniform seasonable distribution of run-off: during the period of spring flood about 70% of total run-off is released and in winter only about 5%.

Save the Tom
river!
