

Nikola Tesla

{ Gloomy genius
{ 1856-1943

Childhood

Nikola Tesla was born in Austria-Hungary, July 9, 1856. He was the fourth child in family clergyman. His father wanted him to become a priest, but Tesla went to study at a technical school in Graz.

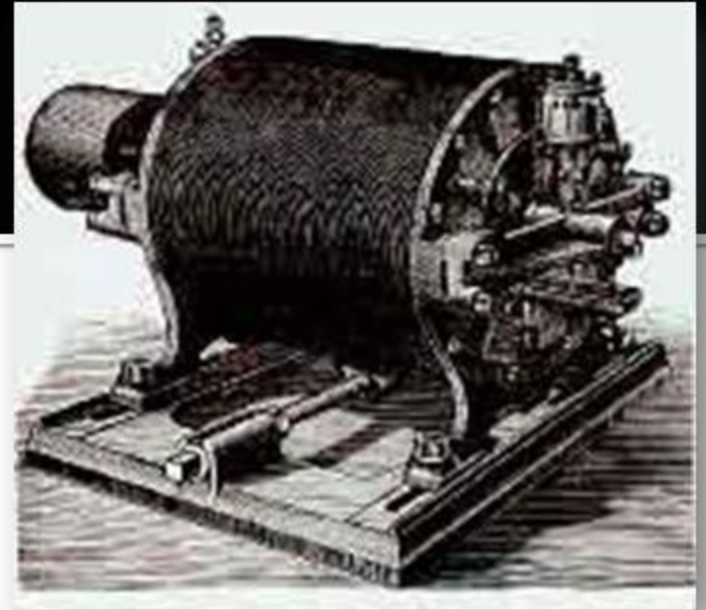

Education

- **Tesla received a classical education, spoke several languages, graduated from the Polytechnic University Graz (1878) and Prague University (1880). In 1883 produced his first electric motor.**

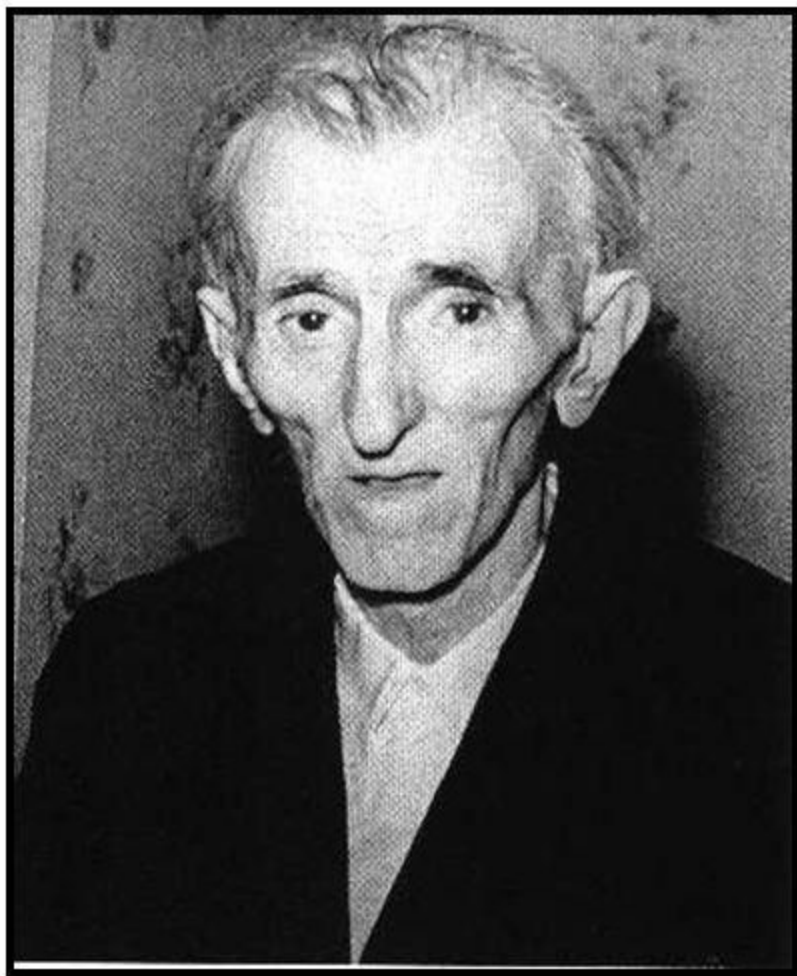

Inventions

Tesla's inventions such as alternators, induction motor, induction machine, three-phase and multi-phase transformers, radically changed the principles of the use of electricity, which existed at the time, and still have not lost their importance

Death

- **Tesla died on January 7, 1943. He was 86 years old.**
- **The body of the great inventor was cremated, and the urn containing the ashes installed on Fernklif cemetery in New York.**
