# TAKING ACTION

- The first stage of work

We chose the project topic pretty quickly, as we like technology. We had experience working with projects and it helped us a lot. Our end product will be a technology news website. And also, we immediately assigned responsibilities.

# TAKING ACTION

- Second stage of work

We searched for news for our site using primary and secondary sources, and we also analyzed them. We used Information literacy skills and SWOT here. We made the information concise, showing all the most important.

# TAKING ACTION

- The third stage of work

We made a complete website and tested it. It came out with a nice design and optimization.
