

The background of the slide is a close-up, artistic rendering of several COVID-19 virus particles. These particles are spherical with a textured surface and numerous sharp, conical spikes protruding from them. They are set against a blurred background of purple and teal colors. A semi-transparent blue rectangular box is centered over the image, containing the title text in white.

# **The vulnerability of animals to catching COVID – 19**

**Выполнила студентка г. 26Б181(1) Сидорова Юлия**

# Map of the spread of the coronavirus.

Greater horseshoe bats

# The main points of my speech are follows:

1. Which animals are vulnerable to catching Covid – 19?
2. How does coronavirus manifest in infected animals?
3. What role does the vulnerability of some animals to catching Covid – 19 for humanity?

ferret

cat

baboon

bat

camel

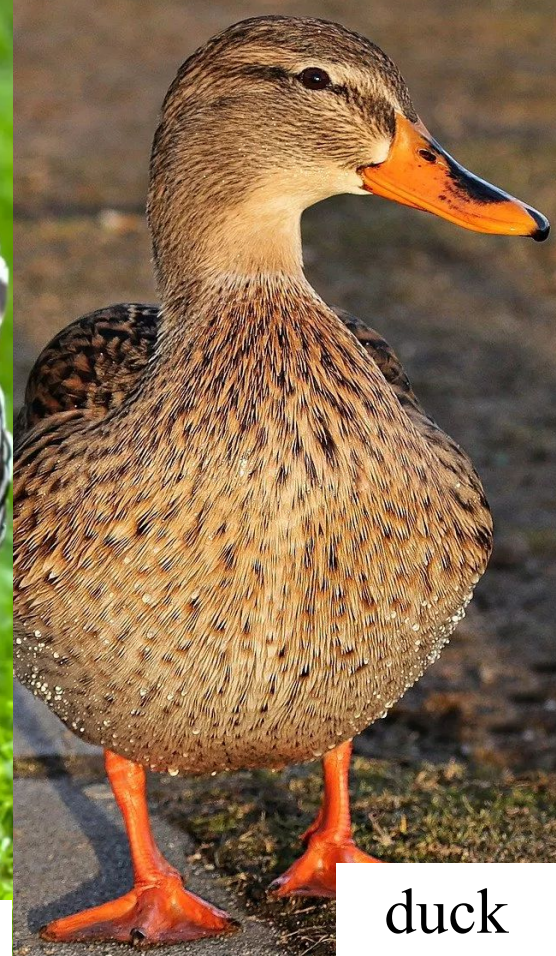

dog

pig

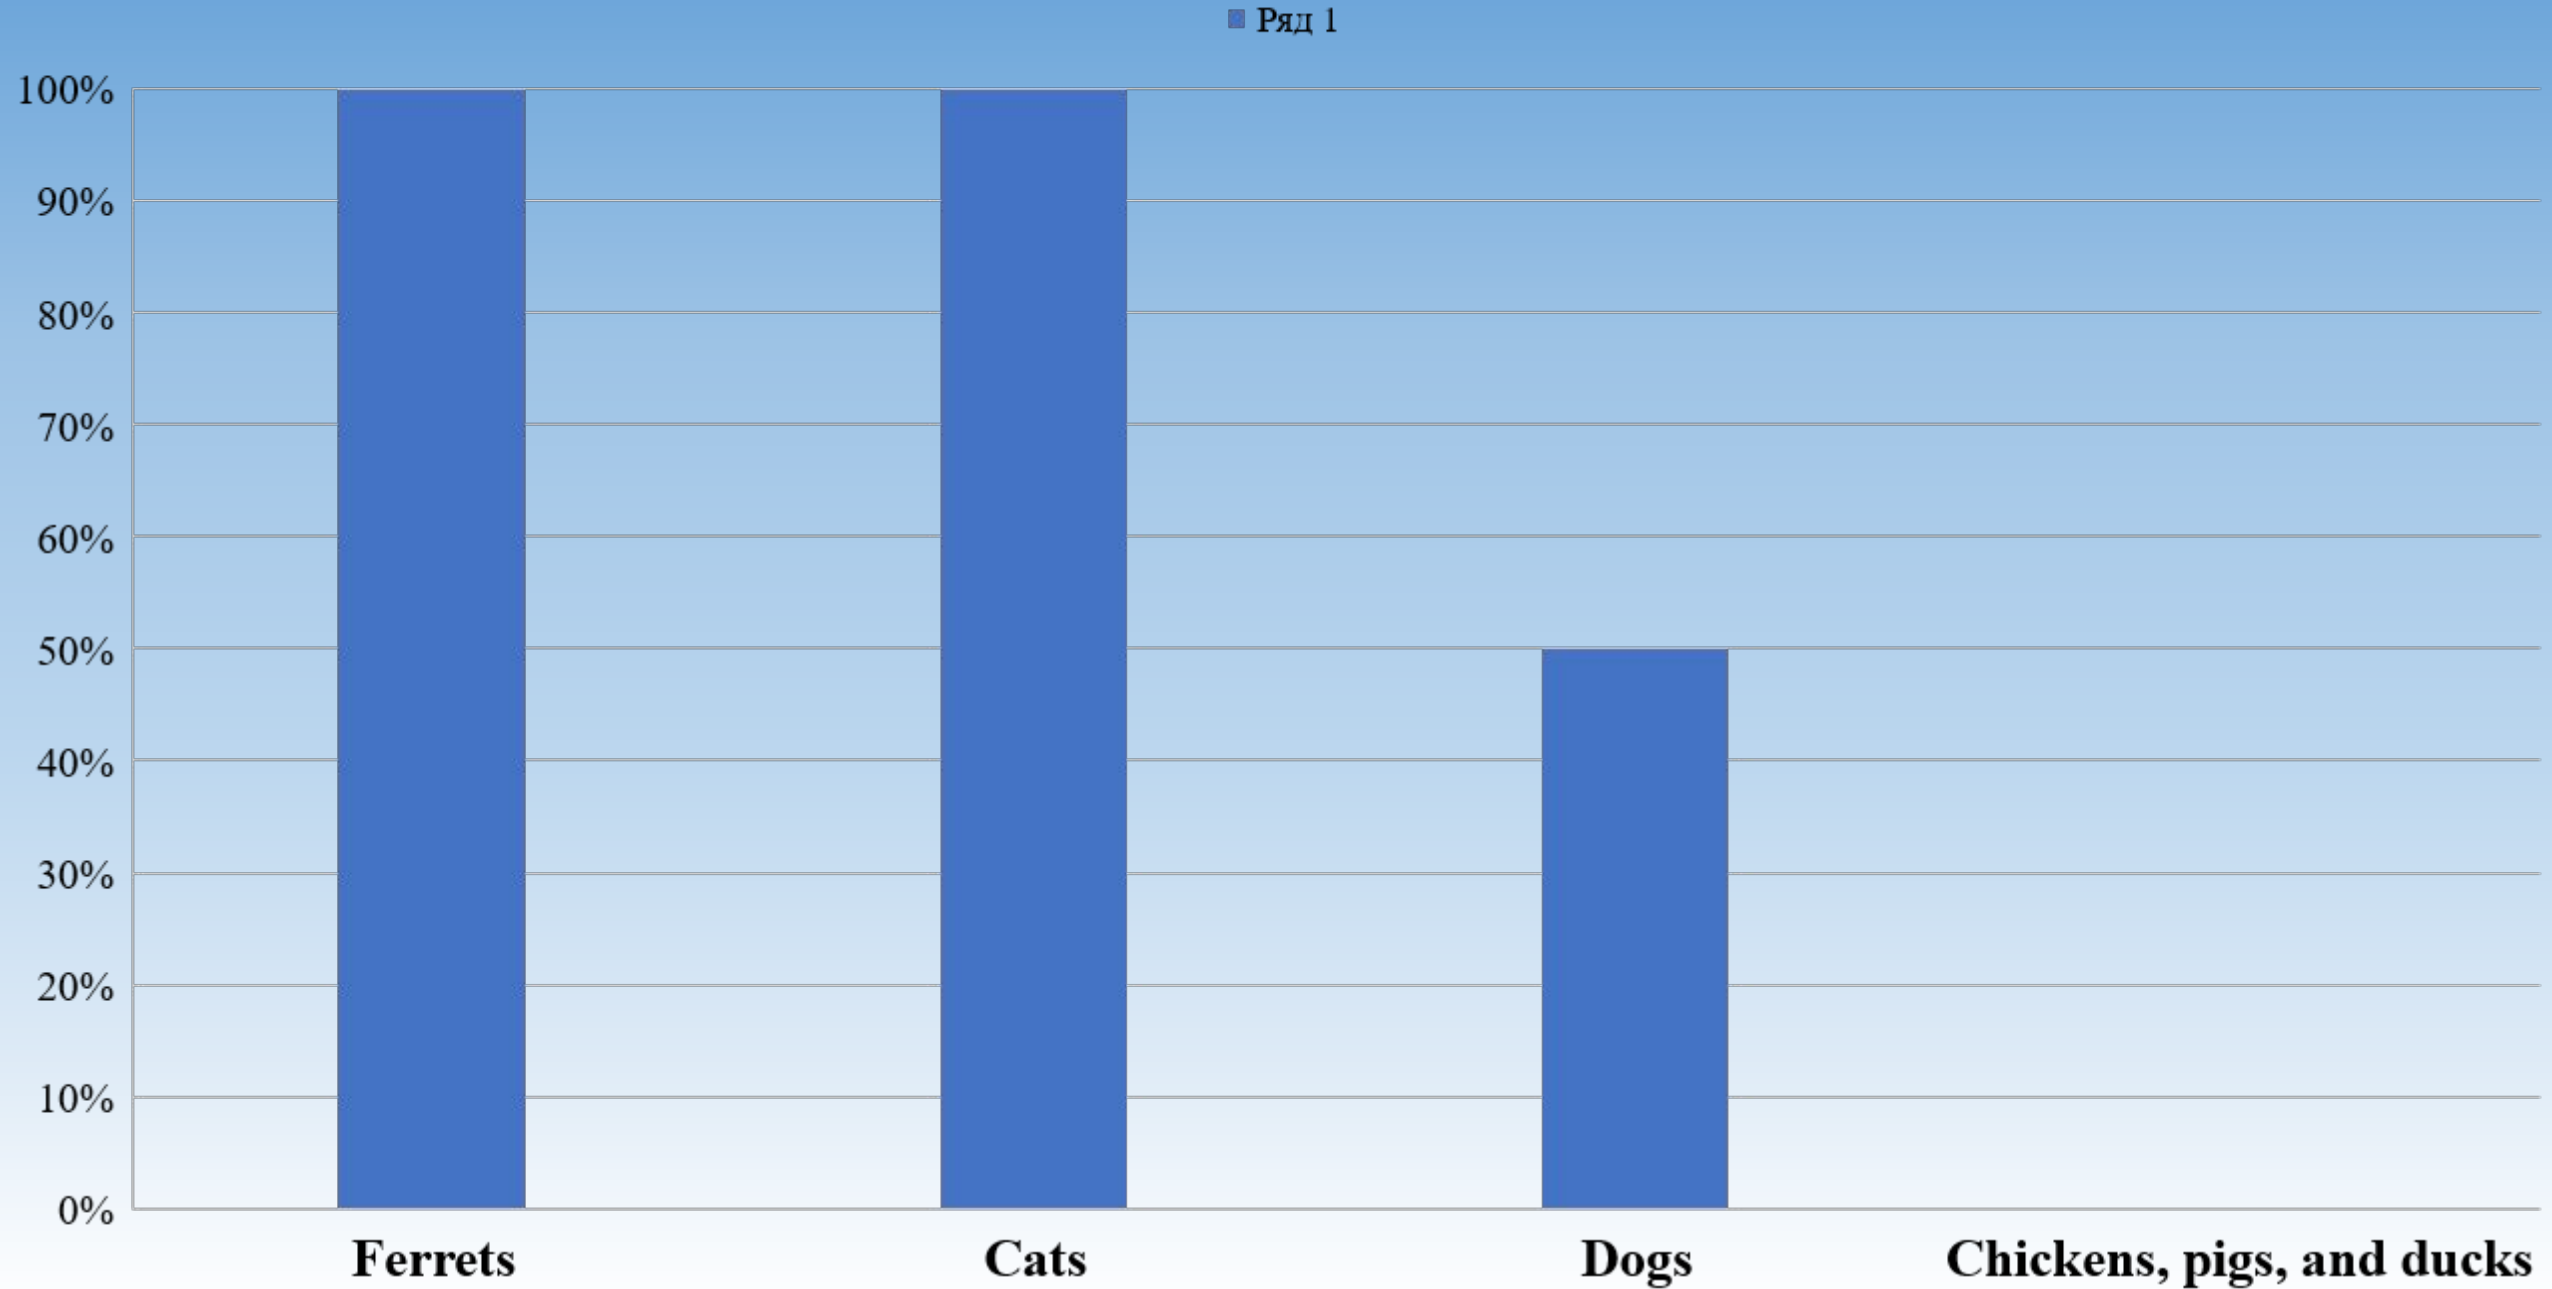

chicken

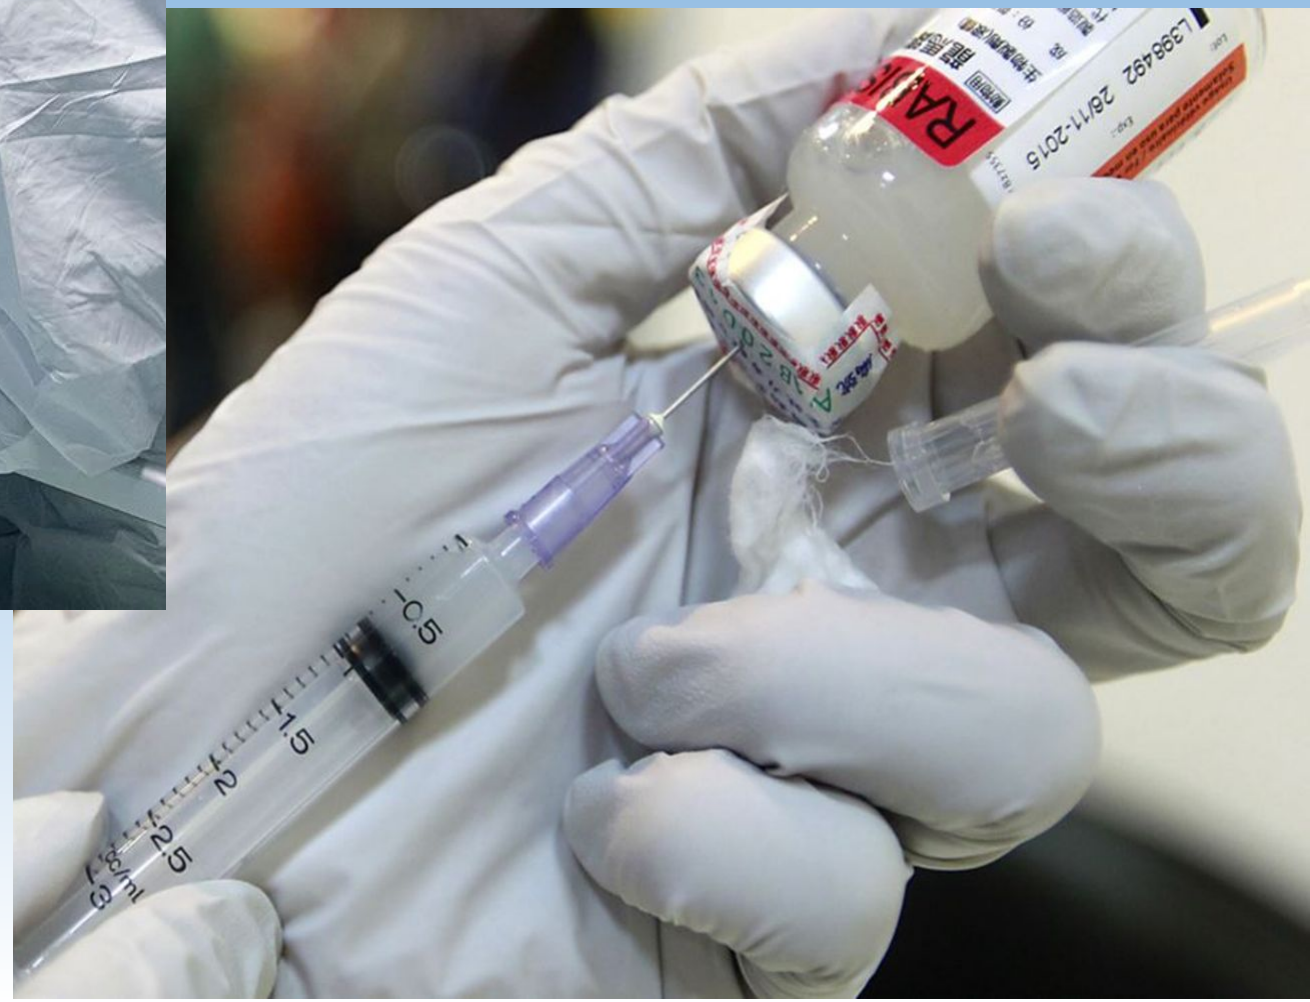

duck

# The degree of vulnerability of animals to catch COVID-19
