# HTML Tables

- Tables represent tabular data
  - A table consists of one or several rows
  - Each row has one or more columns
- Tables comprised of several core tags:
  - `<table></table>`: begin / end the table
  - `<tr></tr>`: create a table row
  - `<td></td>`: create tabular data (cell)
- Tables should not be used for layout
  - Use CSS floats and positioning styles instead

# Simple HTML Tables – Example

```
<table cellspacing="0" cellpadding="5">
  <tr>
    <td></td>
    <td><a href="lecture1.ppt">Lecture 1</a></td>
  </tr>
  <tr>
    <td></td>
    <td><a href="lecture2.ppt">Lecture 2</a></td>
  </tr>
  <tr>
    <td></td>
    <td><a href="lecture2-demos.zip">
      Lecture 2 - Demos</a></td>
  </tr>
</table>
```

# Data Cells and Header Cells

- Two kinds of cells in HTML tables
  - Data cells – containing the table data
  - Header cells – used for the column names or some more important cells
- Why two kinds of cells?
  - Used to semantically separate the cells

```
<tr>
  <th>Full Name</th> <th>Mark</th>
</tr>
<tr>
  <td>Doncho Minkov</td> <td>Very good (5)</td>
</tr>
<tr>
  <td>Georgi Georgiev</td> <td>Excellent (6)</td>
</tr>
```

# Complete HTML Tables

- Table rows split into three semantic sections: header, body and footer
  - `<thead>` denotes table header and contains `<th>` elements, instead of `<td>` elements
  - `<tbody>` denotes collection of table rows that contain the very data
  - `<tfoot>` denotes table footer but comes BEFORE the `<tbody>` tag
  - `<colgroup>` and `<col>` define columns (used to set column widths)

rules="groups"

# Complete HTML Table: Example

```
<table>
```

columns

```
  <colgroup>
```

```
    <col style="width:100px" /><col />
```

```
  </colgroup>
```

```
  <thead>
```

```
    <tr><th>Col 1</th><th>Column 2</th></tr>
```

footer

```
  </thead>
```

```
  <tfoot>
```

```
    <tr><td>Footer 1</td><td>Footer 2</td></tr>
```

Last comes the body (data)

```
  </tfoot>
```

```
  <tbody>
```

```
    <tr><td>Cell 1.1</td><td>Cell 1.2</td></tr>
```

```
    <tr><td>Cell 2.1</td><td>Cell 2.2</td></tr>
```

# Complete HTML Table: Example (2)

```
<table>
  <colgroup>
    <col style="width:200px" /><col />
  </colgroup>
  <thead>
    <tr><th>Column 1</th><th>Column 2</th></tr>
  </thead>
  <tfoot>
    <tr><td>Footer 1</td><td>Footer 2</td></tr>
  </tfoot>
  <tbody>
    <tr><td>Cell 1.1</td><td>Cell 1.2</td></tr>
    <tr><td>Cell 2.1</td><td>Cell 2.2</td></tr>
  </tbody>
```

table-full.html

Although the footer is before the data in the code, it is displayed last

# Nested Tables

Tables in Tables in Tables in Tables...

# Nested Tables

- Table "cells" (<td>) can contain nested tables (tables within tables):

[nested-tables.html](#)

```
<table>
  <tr>
    <td>Contact:</td>
    <td>
      <table>
        <tr>
          <td>First Name</td>
          <td>Last Name</td>
        </tr>
      </table>
    </td>
  </tr>
</table>
```

# Complex Tables

With Padding, Spacing and Stuff

# Cell Spacing and Padding

- Tables have two attributes related to space

- ◆ **cellspacing**

- ◆ **Defines the empty space between cells**

- ◆ **cellpadding**

- ◆ **Defines the empty space around the cell content**

# Cell Spacing and Padding – Example

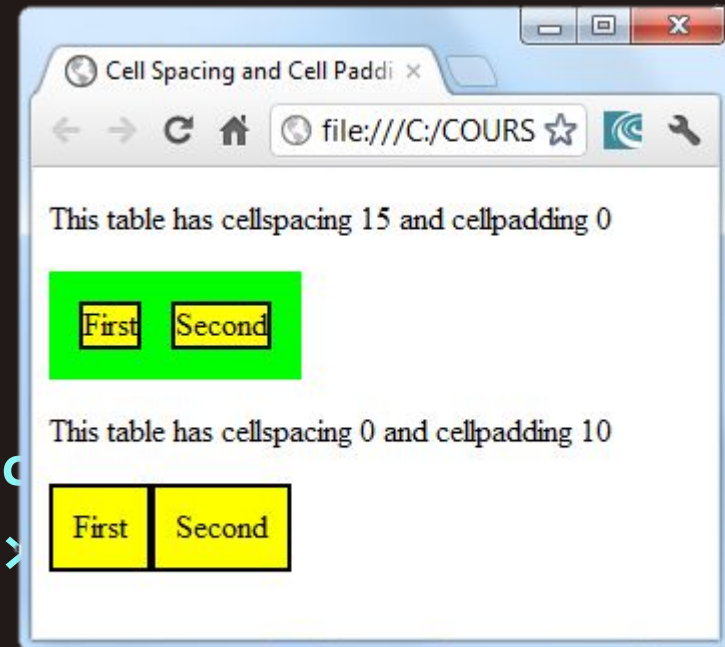

## table-cells.html

```
<html>
  <head><title>Table Cells</title></head>
  <body>
    <table cellspacing="15" cellpadding="0">
      <tr><td>First</td>
      <td>Second</td></tr>
    </table>
    <br/>
    <table cellspacing="0" cellpadding="10">
      <tr><td>First</td><td>Second</td></tr>
    </table>
  </body>

# Homework

1. Create Web Pages like the following using tables:

*Fresh Fruits*

It has long been known that a diet that includes at least a few servings of fresh fruit every day will help keep you healthy, fit and trim.

Title goes here		A	B	
	D	E	F	G
C	H	I

2. Create a Web Page like the following using forms:

Member name :  \*req

Email :  \*req

School :  \*req

# Homework (2)

3. Create a Calculator-like table. You should use a HTML 5 form for the Calculator
- Buttons for all the numbers and operators (+, -, etc.)
  - Textbox for the result
  - Do not make the same styles as the example
