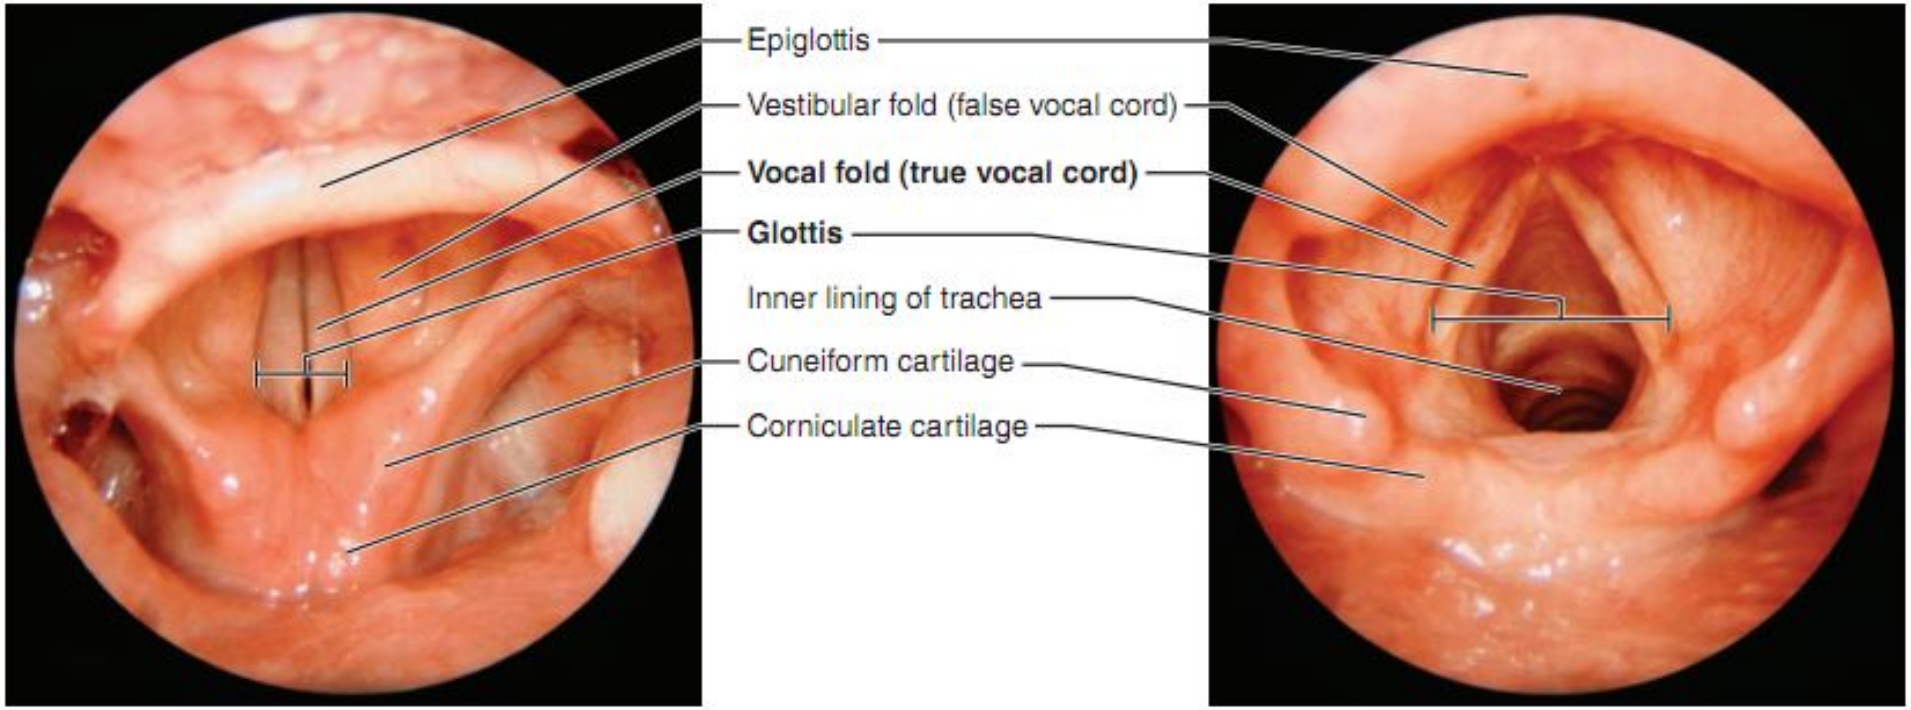
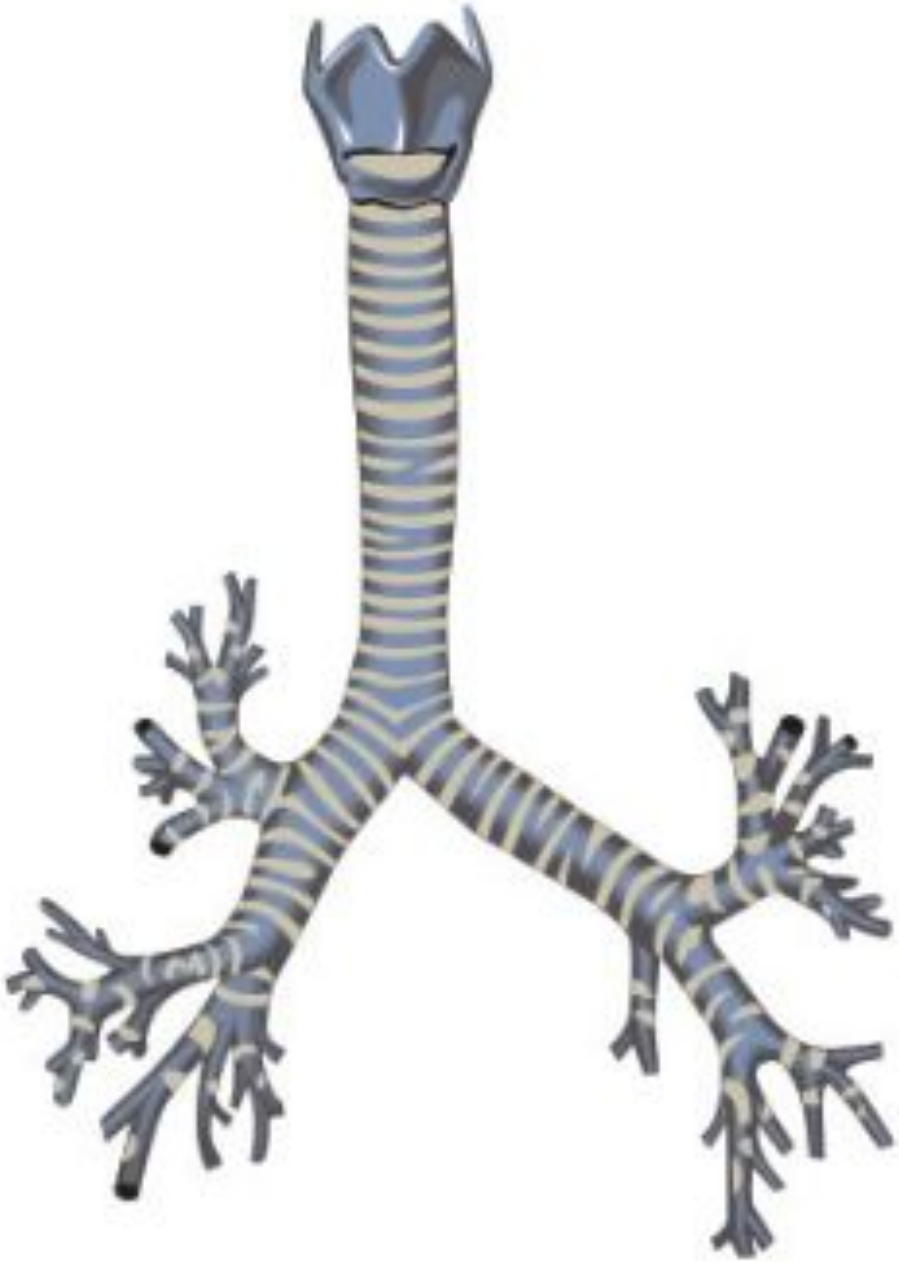
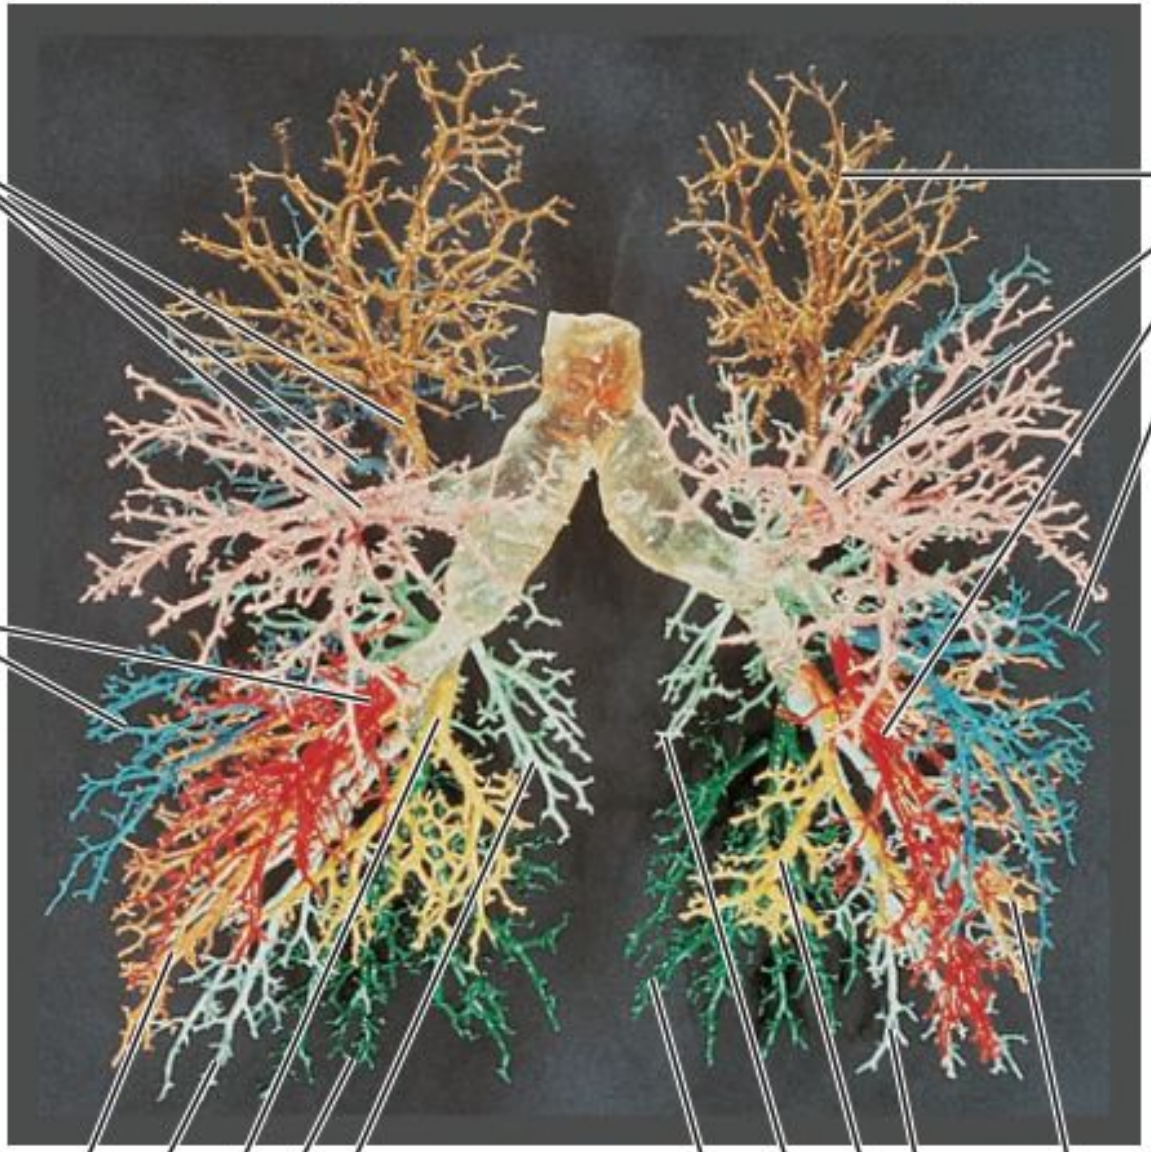
Cuneiform cartilage
Corniculate cartilage
Arytenoid cartilage
Arytenoid muscle
Cricoid cartilage
Tracheal cartilages
Body of hyoid bone
Thyrohyoid membrane
Fatty pad
Vestibular fold (false vocal cord)
Thyroid cartilage
Vocal fold (true vocal cord)
Cricothyroid ligament
Cricotracheal ligament

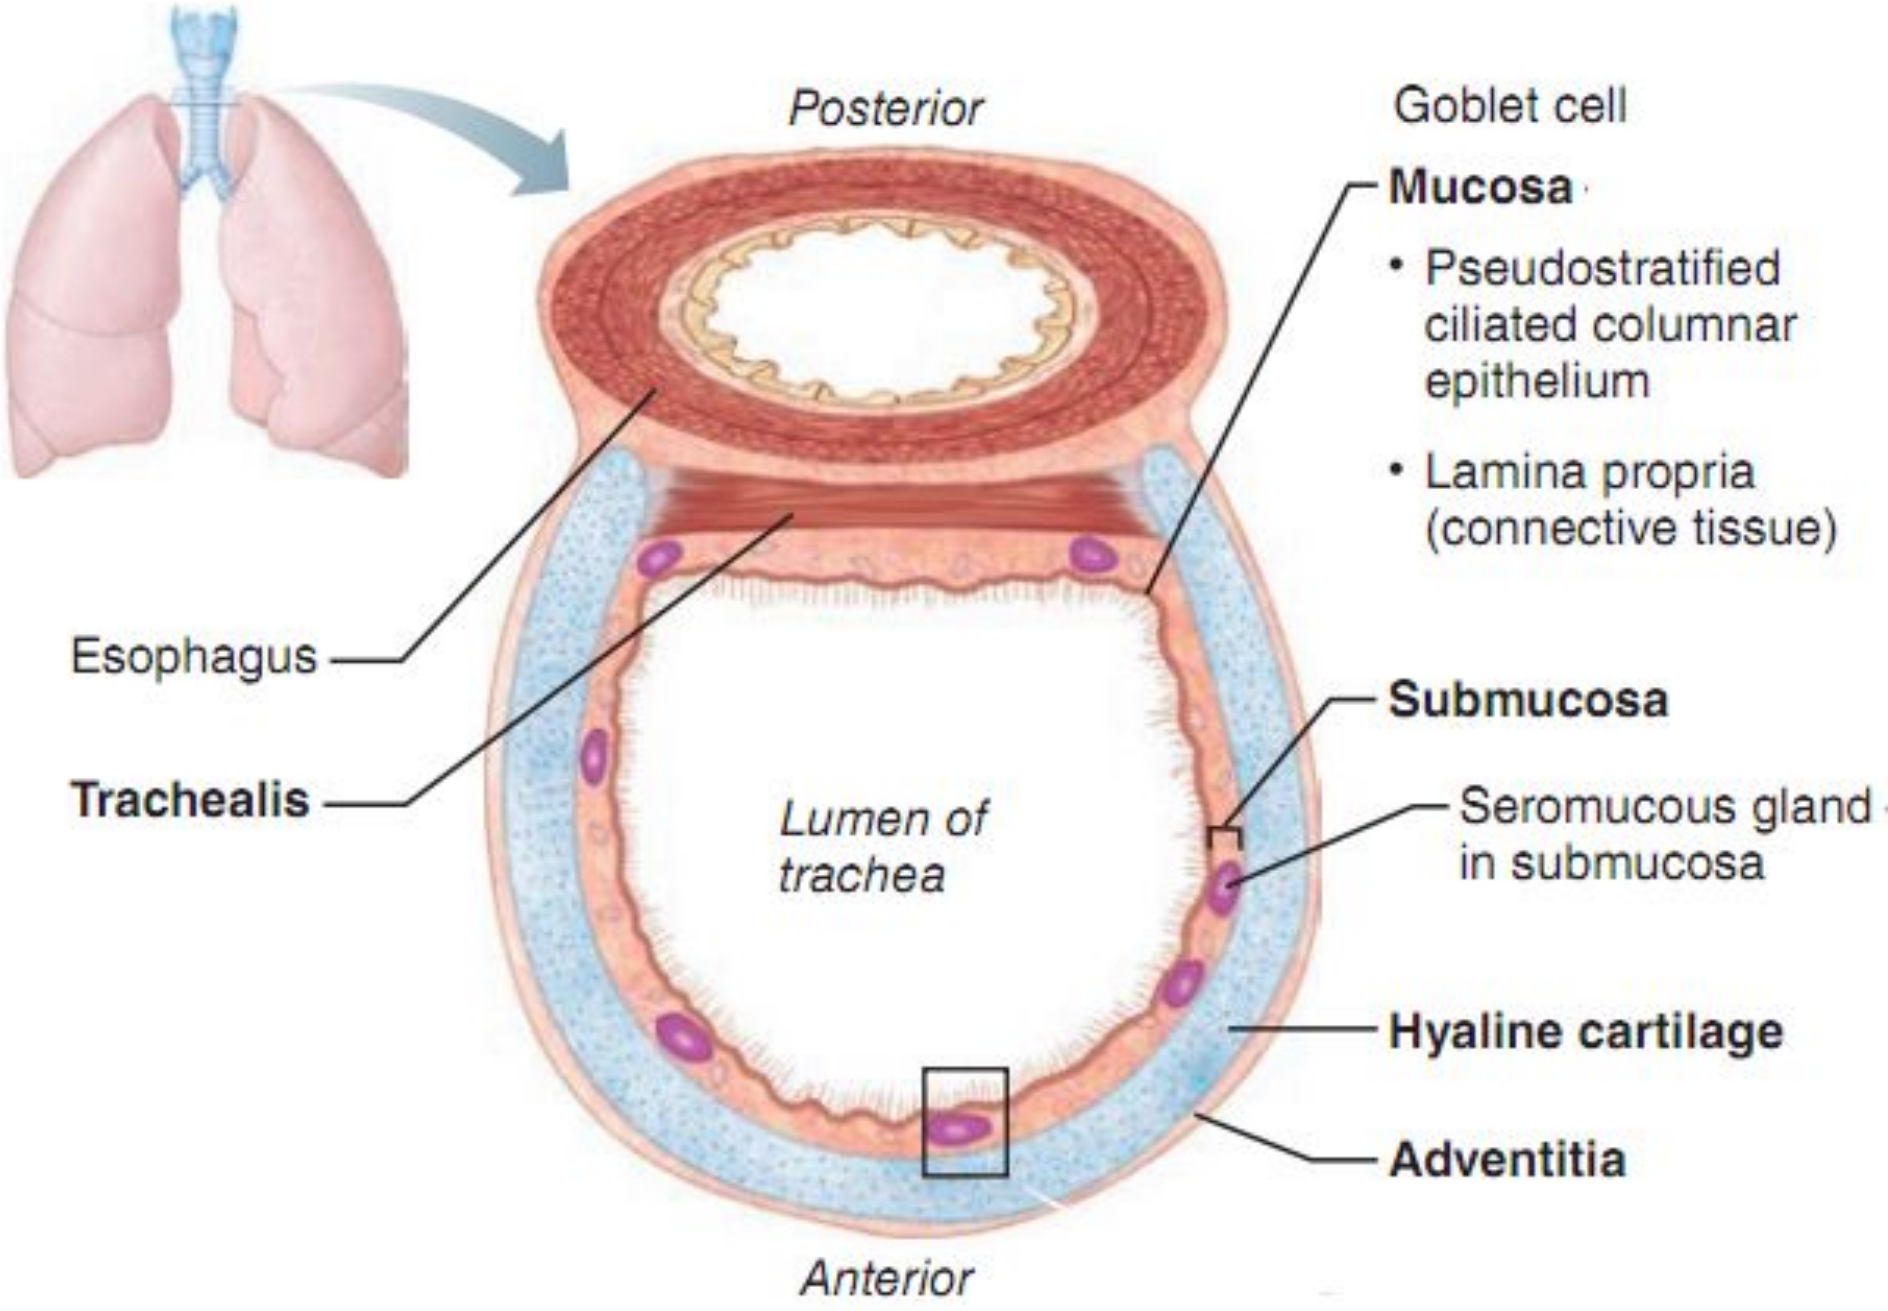


Epiglottis
Vestibular fold (false vocal cord)
Vocal fold (true vocal cord)
Glottis
Inner lining of trachea
Cuneiform cartilage
Corniculate cartilage

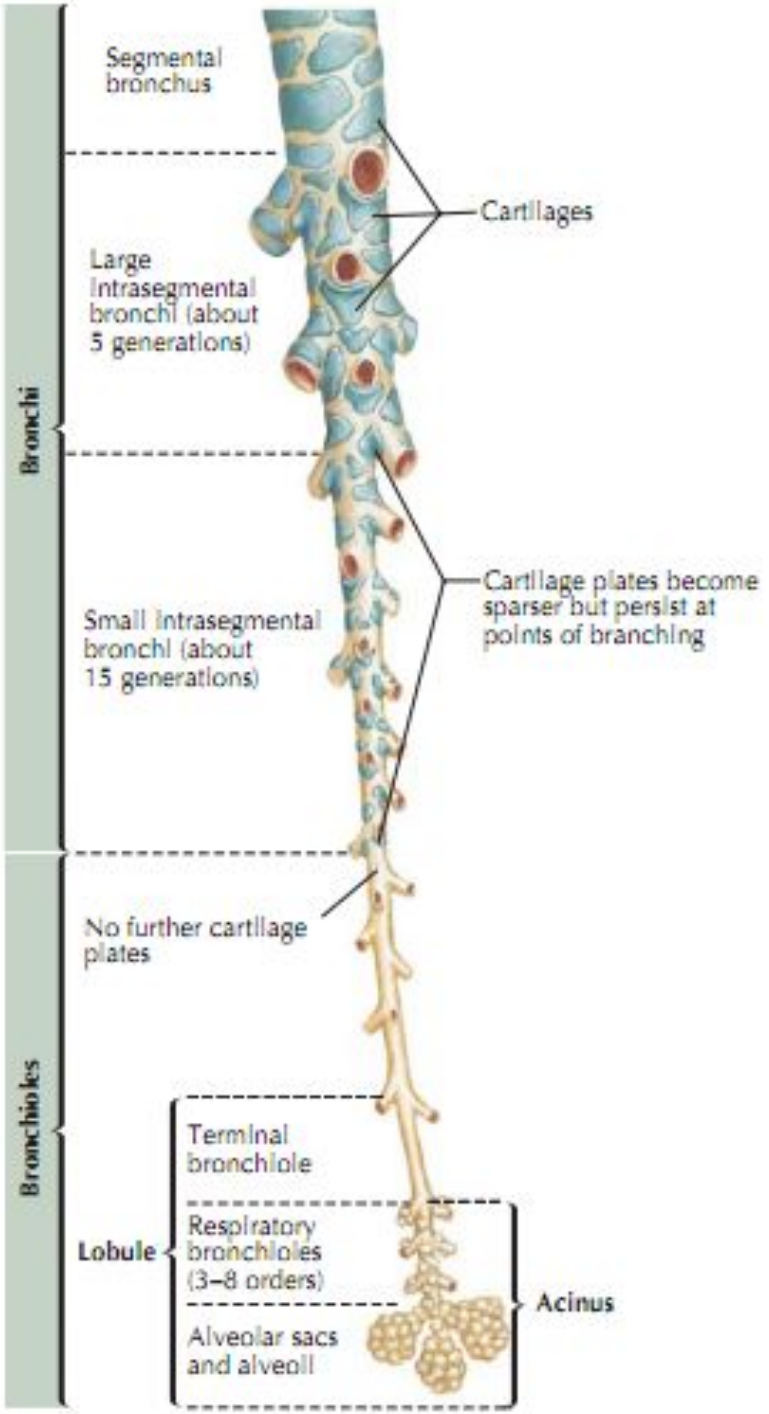




Right lung
Left lung
Right superior lobe (3 segments)
Right middle lobe (2 segments)
Right inferior lobe (5 segments)
Left superior lobe (4 segments)
Left inferior lobe (5 segments)



Posterior
Goblet cell
Mucosa
• Pseudostratified ciliated columnar epithelium
• Lamina propria (connective tissue)
Esophagus
Trachealis
Submucosa
Lumen of trachea
Seromucous gland in submucosa
Hyaline cartilage
Adventitia
Anterior



Segmental bronchus
Cartilages
Large intrasegmental bronchi (about 5 generations)
Cartilage plates become sparser but persist at points of branching
Small intrasegmental bronchi (about 15 generations)
No further cartilage plates
Terminal bronchiole
Respiratory bronchioles (3–8 orders)
Alveolar sacs and alveoli
Lobule
Acinus
Bronchi
Bronchioles

Intrapulmonary
pressure (0 mm Hg)

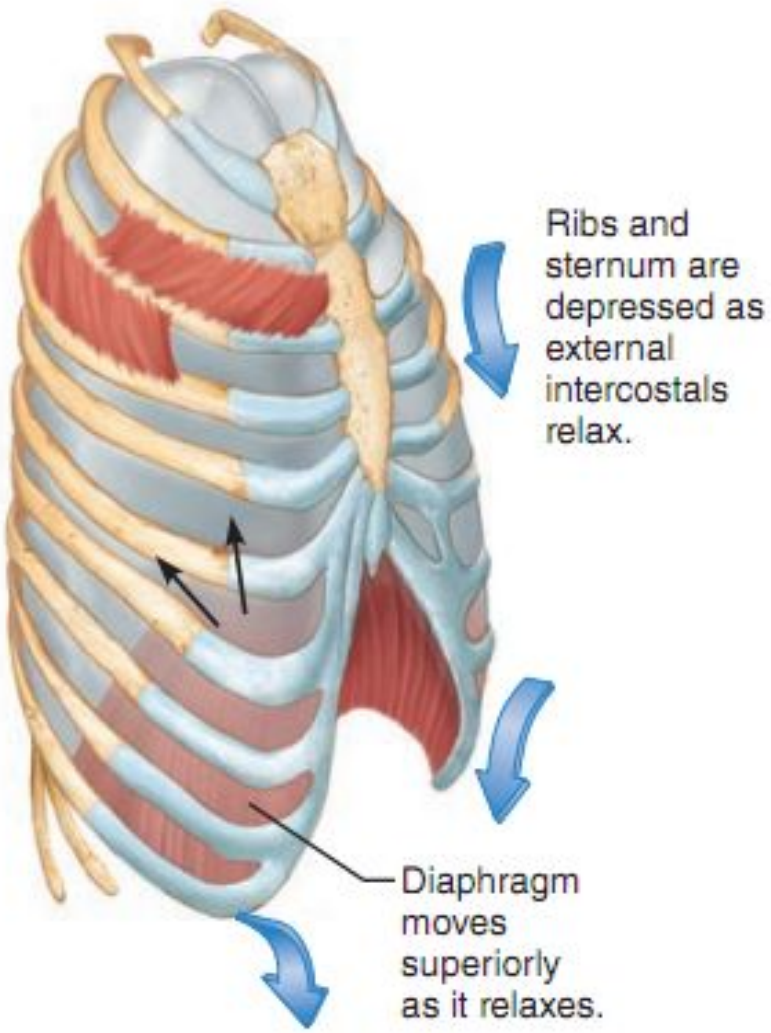
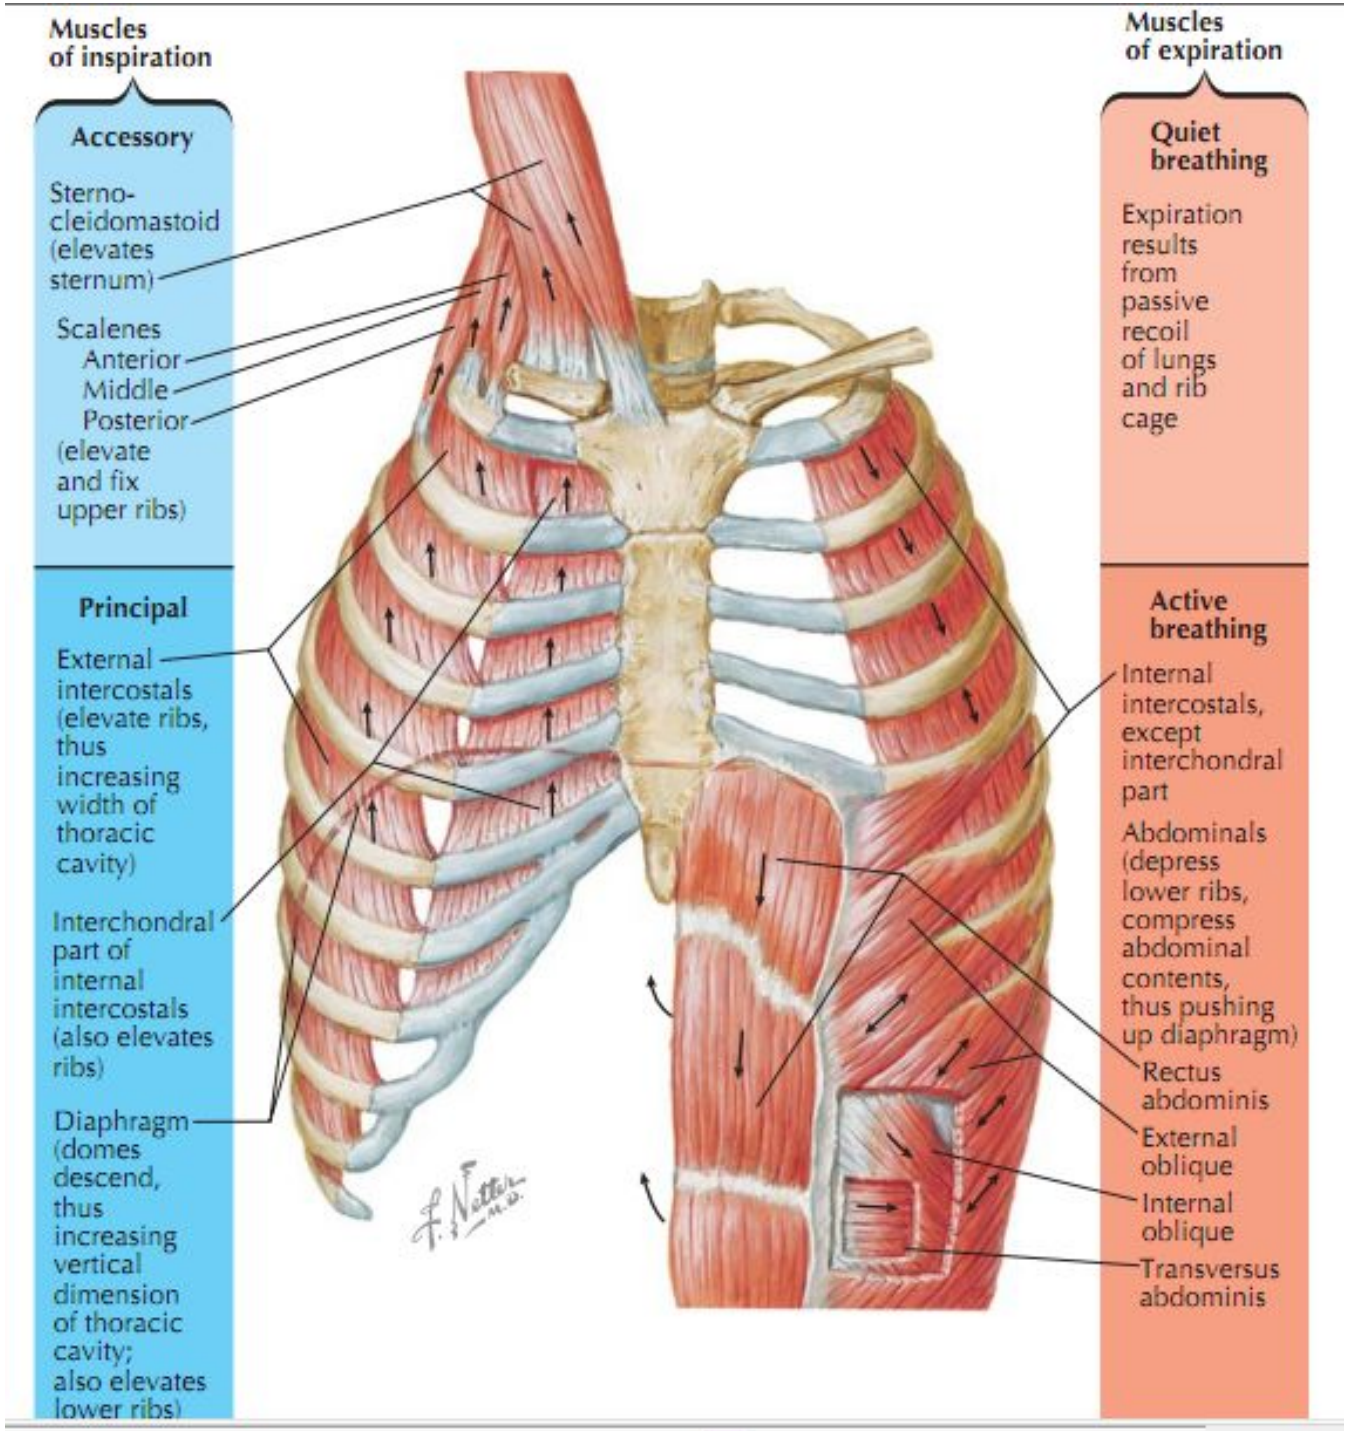
Ribs are elevated and sternum flares as external intercostals contract.
Diaphragm moves inferiorly during contraction.



Ribs and sternum are depressed as external intercostals relax.
Diaphragm moves superiorly as it relaxes.



Muscles of inspiration
Accessory
Sterno-cleidomastoid (elevates sternum)
Scalenes
Anterior
Middle
Posterior
(elevate and fix upper ribs)
Principal
External intercostals (elevate ribs, thus increasing width of thoracic cavity)
Interchondral part of internal intercostals (also elevates ribs)
Diaphragm (domes descend, thus increasing vertical dimension of thoracic cavity; also elevates lower ribs)
Muscles of expiration
Quiet breathing
Expiration results from passive recoil of lungs and rib cage
Active breathing
Internal intercostals, except interchondral part
Abdominals (depress lower ribs, compress abdominal contents, thus pushing up diaphragm)
Rectus abdominis
External oblique
Internal oblique
Transversus abdominis

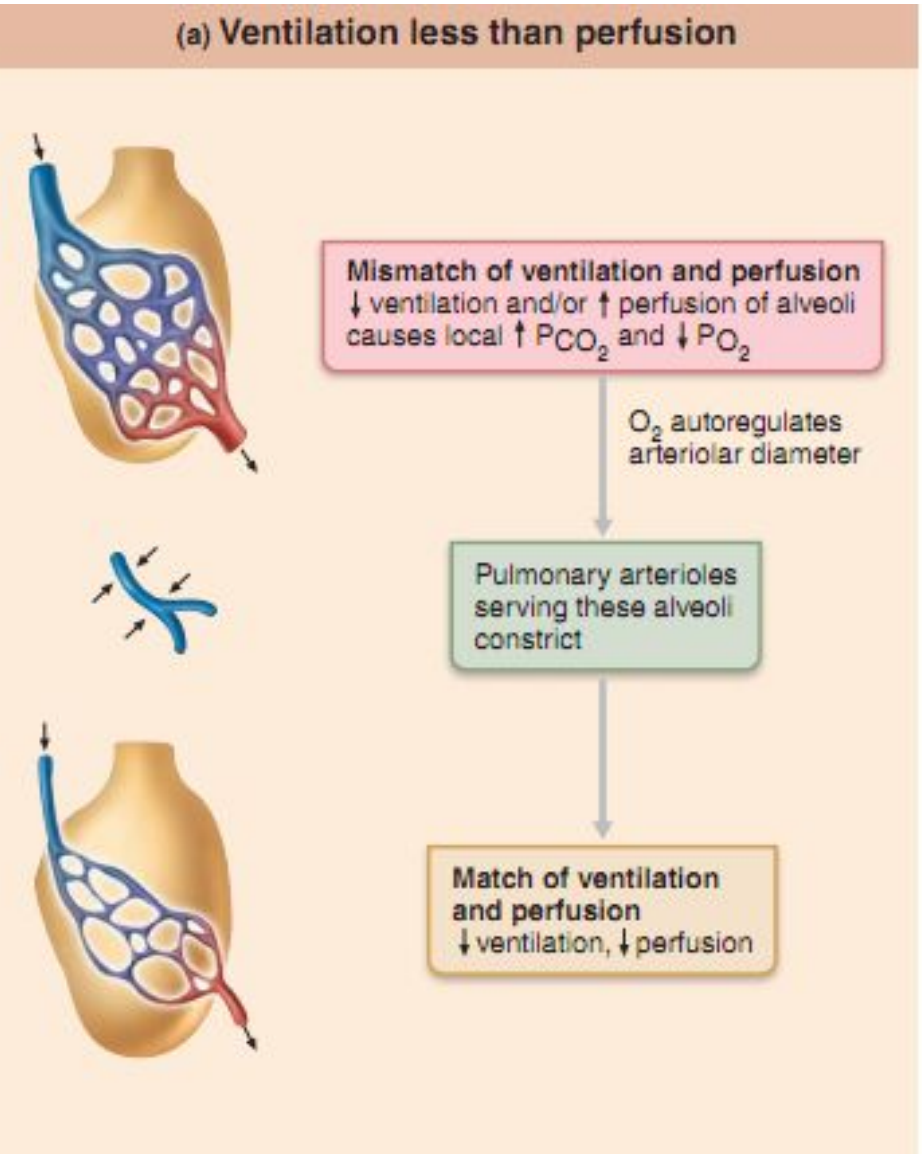
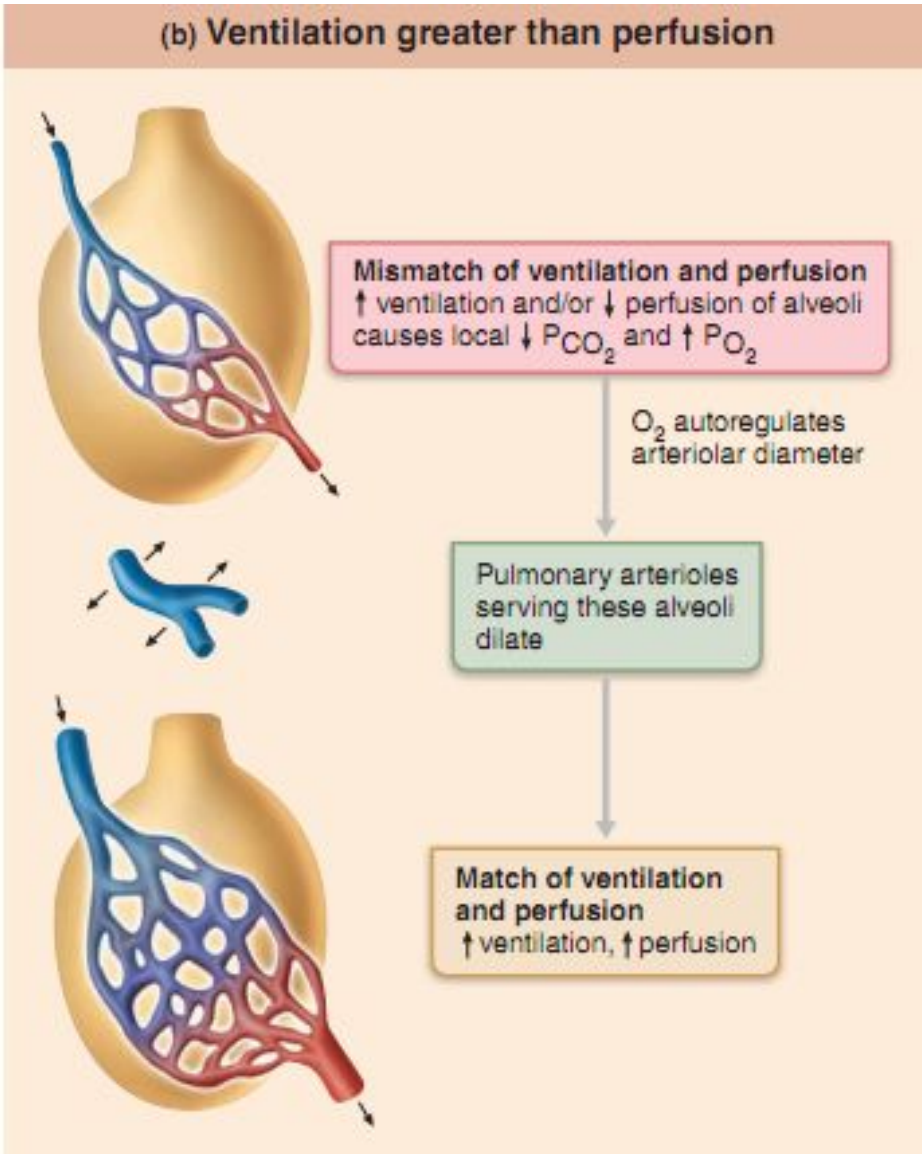
Time in the pulmonary capillary (s)
Start of capillary
End of capillary



(a) Ventilation less than perfusion
Mismatch of ventilation and perfusion
↓ ventilation and/or ↑ perfusion of alveoli causes local ↑ P_{CO_2} and ↓ P_{O_2}
O_2 autoregulates arteriolar diameter
Pulmonary arterioles serving these alveoli constrict
Match of ventilation and perfusion
↓ ventilation, ↓ perfusion



(b) Ventilation greater than perfusion
Mismatch of ventilation and perfusion
↑ ventilation and/or ↓ perfusion of alveoli causes local ↓ P_{CO_2} and ↑ P_{O_2}
O_2 autoregulates arteriolar diameter
Pulmonary arterioles serving these alveoli dilate
Match of ventilation and perfusion
↑ ventilation, ↑ perfusion
