

Ecological problem of humanity

On threshold XXI century ecological problem had global status. Humanity was understanding danger of reduction his life on Earth because of the his influence on unenvironmental management, intensity homekeeping, pollution natural surroundings. But feelings of anxiety for the quality of last is not inherent to all of us, residents of towns and villages, where located the main source of air pollution, natural waters, soils. The Earth that feeds us the air as we breathe, the water as we drink annually suffer huge losses from thoughtless actions of those who use them.

Save the nature

Let's keep to this rules:

- Take your waste home.
- Keep living place under control.
- Don't cut plants.
- Help you keep all water clean.
- Save wildlife, plants and trees.

Take your waste home.

Save wildlife, plants and trees

Keep living place under control

Don't cut plants

Help you keep all water clean

Save wildlife, plants and trees
