Can You Spot Which Person Carries HIV?

The Answer is NO! The AIDS-Virus can hide in a person's blood for many years. People who carry HIV may look and feel healthy, but they can still pass HIV to others!

What Does A Person with AIDS Look Like?

AIDS can look like many other diseases. Don't be confused. Don't spread rumours. See a qualified medical person for tests if you think you or someone you know may have AIDS.

**A man who
shoots up can be
very giving.**

**He can give
you and your
baby AIDS.**

Most babies with AIDS are born to mothers who shot drugs or who sleep with men who have.

Babies with AIDS are born to die.

If you're thinking of having a baby you and your partner need to get tested for AIDS. Only

get pregnant when you're sure both of you aren't infected. Until then help protect yourself and your partner by using condoms.

And if your man shoots drugs, help him get into treatment now. It could save three lives, his, yours and your baby's.

STOP SHOOTING UP AIDS.
GET INTO DRUG TREATMENT.

True Love.

If you care for each other, protect each other. Use a latex condom every time.

It's not 100% protection against AIDS—only doing without sex and IV drugs entirely does that—but it cuts your risk considerably. For more information, call the AIDS hotline in Northern California at 1-800-367-2437, or in Southern California at 1-800-922-2437.
