London would not be London without the River Thames. It flows 215 miles across the English countryside and then through the heart of the great city before it **reaches** the sea. The Thames has played an **extremely** important part in making England what it is today.

England had very few roads in the past, so the Thames **provided** a major highway between London and many parts of the country. People could also send **supplies** of food and other goods to and from London by boat. In times of war, London was protected from sea attacks because they built castles and forts at the mouth of the river. People from the London area got their **drinking** water from the Thames, and **thirsty** cows and sheep were a common sight along its **banks**.

With the **Industrial** Revolution in the 18th century, the Thames became one of the busiest waterways in the world. Factories made and **exported** goods of all kinds. So people became rich and many of them built **beautiful** houses along the banks of the river. The **famous** writer Charles Dickens spent part of his **childhood** (**child**) there and later wrote about the Thames in his books.

Today, the Thames has become a **symbol** of London, just as much as Big Ben or Buckingham Palace. If you take a **stroll** along its banks, you'll have a day full of **pleasant** surprises. You can admire bridges built in many **different** architectural styles. The most **famous** one is probably Tower Bridge which opens up 1,000 times a year to let ships through. Or you might be lucky enough to see London's rowing event, the Oxford and Cambridge Boat Race, which takes place on the river every spring. Whether you're a Londoner or a visitor, the Thames will always have something to offer you.

The river Kama is an important river in Russia. Situated in west-central Russia, it is one of the longest tributaries of the Volga and 1,805 kilometres long. It starts its journey in Udmurtia, near the town of Kuligi and flows north, then east, south and south-west until it reaches the Volga river. There are many cities situated on the banks of the Kama, such as Solikamsk, Berezniki and Perm.

The Kama is a valuable waterway to the Urals and Siberia and is, therefore, often used as a trade route. Its waters support a wide variety of industries and its floodplains are rich in salt and potassium. There are hydroelectric stations at Perm and petroleum is extracted in the Sylva and Iren valleys.

Although the Kama is mostly associated with industry, it remains a beautiful river nonetheless. During the winter months when the river is frozen, you can find people ice-skating and during the warmer months of the year many enjoy strolling along its banks.
