

# Healthy Food

Выполнил: Андрей Костров 8Б

# All food is made up of nutrients which our bodies use. There are different kinds of nutrients:

- 1) Carbohydrates
- 2) Proteins
- 3) Fats
- 4) Vitamins
- 5) Minerals

**Before we cut down on fat, sugar and salt, we have to know a bit more about the kind of these things might be in.**

- 

**The biggest problem comes when these things are hidden in other foods: biscuits, crisps, sausages, meat pies, soft drinks and so on.**

**Another thing to know is, for example, that we do need fat to live, it's an essential part of our diet and physically we couldn't exist without it. But we all know that to eat much fat is bad for our health.**

**There are fats that are good for us and fats that are bad for us. Eating less of the bad ones and more of the good ones can actually help us to live longer!**

**Bad fats, found in animal productions,  
like red meat, butter and cheese**

**Friendly fats are fats found naturally in foods like nuts and seeds, olives, avocados and fish.**

**More and more people feel strongly about the way; their food is produced. Nowadays so much of the basic food we eat-meat, fish, fruit and vegetables - is grown using chemicals.**

**Firstly, we should eat less fat. •Secondly, we are to cut down on sugar and salt. •Thirdly, we must eat more fresh fruit and vegetables.**

**THE END**
