

Core engineers in our began to work in radar industry 25+ years ago, they were involved into such projects as Soviet analogue of US Strategic Defense Initiative and last Soviet space based SAR.

During various research and development projects past decade, our team gain technological expertise and solutions in the following areas of sensor technology:

- ❖ Modular, light-weight, multi-frequency band SAR;
- ❖ Scalable, multi-mode SAR, IFSAR and GMTI;
- ❖ Very High Resolution SAR;
- ❖ SAR image processing algorithms and software;
- ❖ Advanced RF engineering;
- ❖ HPEC system engineering with COTS and self-developed components;
- ❖ Payload integration with manned and unmanned platforms.

We are very proud that during last decade our team had zero failed research or development projects.
