

Introduction

Intelligent Data Platform Access Control solves 3 main problems seen by financial firms:

- Allows firms to quickly add/remove user access to vendor websites/desktop applications
- Prevents users from sharing passwords
 - Users never know their password in the first place, it's all encrypted and entered programmatically
- Tracks every single click made by a user □ allows managers to make informed decisions on which services are most cost effective and which are not worth the expense

BREAKING

Johnson Brexit Deal Clears Hurdle but Timetable Rejected

U.K. lawmakers endorsed Prime Minister Boris Johnson's Brexit deal, but in a sign of the challenges ahead, lawmakers voted minutes later against a proposed timetable to push it.
