CONTEXT AND BACKGROUND

Since January 2022, the Power Central Asia (PCA) has mobilized three advisors in Dushanbe, on implementation of utility strengthening objective, with main focus in loss reduction activities in the Ferdowsi Electricity Networks District.

The aim of this support is to provide commercialization and loss reduction assistance to Ferdowsi Electricity Networks District, which will focus on management support to address losses and assistance with the required performance turnaround.

This document consolidates initiatives, which aim to improve performance with more effective and efficient operational improvements at Ferdowsi District initially, and which can then be applied throughout DISCO, while not requiring significant investment and using existing in-house resources.

The initiatives have been developed and assessed based on the specifics and characteristics of the Ferdowsi district, based on a detailed diagnostic report and actual field engagement by the Power Central Asia utility specialists.

 - C. Action Plan

APPROACH

A number of shortfalls were identified during the diagnostic exercise conducted during January - March 2022. A set of solutions to the problems have been identified. Solutions have been grouped into several initiatives and under each initiative, several projects have been identified.

The initiatives are categorized into three main pillars – Effective Management and Governance Improvements, Operational Improvements, and Internal Control.

For each project, a plan has been prepared with objectives, timelines, deliverables, dependencies, as well as potential risks, that need to be mitigated.

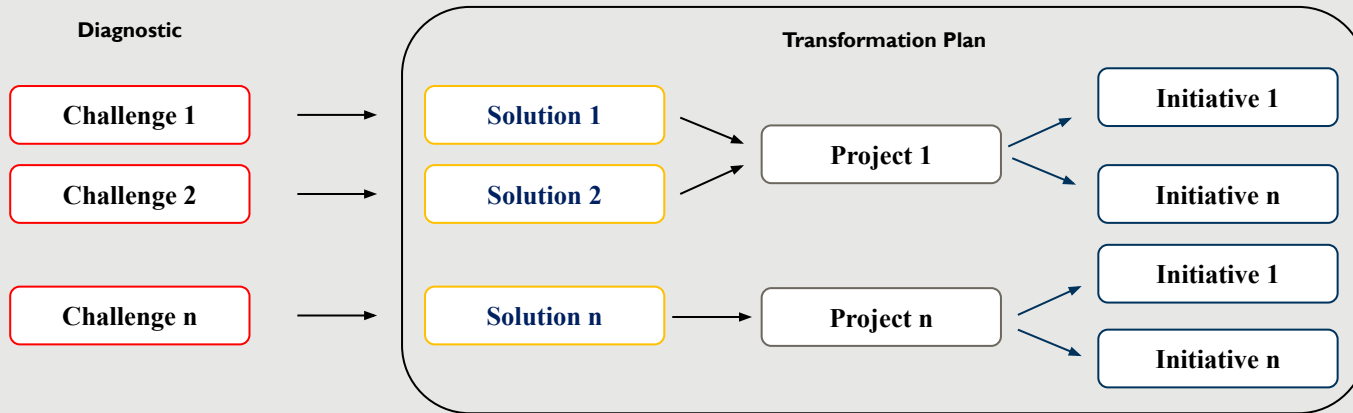

TABLE OF CONTENTS

1. Context and Background
2. Turnaround Plan
 - A. Approach
 - B. Key Projects
 - C. Action Plan

KEY PROJECTS

Effective Management and Governance Improvements

Strengthening Management Effectiveness

- Establishing Operationalized Structure
 - Regional Structure
 - District Structure
- Reviewing and Redesigning Processes
- Recruitment, Employment and Gender Equality
- Effective Job Description
- Key Performance Indicators
- Periodical Performance Evaluation and Skill Assessment

Talent Management

- Enhance Talent Management in line with DCEN Strategy and Goals
- Enhance Strategic Employee Planning
- Effective Incentive Scheme
- Training and Capacity Building

Operational Improvements

Commercial Operations Improvements

- Revenue Protection and Loss recovery
- Meter Reading Process and Efficiency
- Billing Process and Efficiency
- Disconnection and Collection Process
- Operational Targets (KPI) on a Regional and District levels
- Technical and Financial Bill Adjustments
- Customer Alignment
- New Connections and Efficiency
- Enhance Analyses and Data Access
- Customer Care and Public Relations

Index to indicate losses

Aggregated Technical, Commercial and Collection Losses (ATC&C)

Technical Operations Improvements

- Energy Balance
- Network Alignment, Energy Accounting and Accountability
- Distribution Network Condition
- Meter Installation and Replacement
- Improve Energy Demand
- Technical Loss Study

Internal Control

Controlling the environment

- Managerial Skills, Directions and Integrity of Employees

Risk Assessment

- Internal Risk
- External Risk

Control Activities:

- Planning, Reporting and Official Documents

Information and communication

- Regional and District Staff Meetings

Monitoring Implementation

- Daily, Weekly, Monthly Monitoring of Activities and Operations

Takeaways / Conclusions

- PCA Target

EFFECTIVE MANAGEMENT AND GOVERNANCE IMPROVEMENTS

STRENGTHENING MANAGEMENT EFFECTIVENESS

Project	Description	Output
1. Operationalized Structure	<ul style="list-style-type: none">Align organizational structure to the transformation objectivesAlign reporting based on accountability lineRedefine commercial and technical responsibilities	<ul style="list-style-type: none">Improves efficiency and effectiveness to achieve high performanceIncreases responsibilities and accountability for the functions
2. Reviewing and Redesigning Processes	<ul style="list-style-type: none">Improving / redesigning operational processes based on organogram changes and company strategyImproving department interactions for effectiveness and increase of internal controlsDefine responsibilities and accountability	<ul style="list-style-type: none">Will improve efficiency of operations,Improve internal controlIncrease accountability to work in line with company targetsShares responsibilities
3. Recruitment, Employment and Gender Equality	<ul style="list-style-type: none">Create more efficient employment agreementIntroduce recruitment guidelines through new employee manualSupport progression and leadership opportunities for women	<ul style="list-style-type: none">Will increase productivity and results in the workEstablish fair and equal work conditions for workFair selection process during hiring
4. Effective Job Description	<ul style="list-style-type: none">Reviewing / drafting job descriptions by introducing KPI'sUpdating / defining specific responsibilities and roles	<ul style="list-style-type: none">Improve responsibility and accountabilityAlign employees to right positions and processes
5. Key Performance Indicators and Targets	<ul style="list-style-type: none">Defining effective and reasonable KPIOperational KPIFinancial KPI	<ul style="list-style-type: none">Improve working efficiencyImprove productiveness and efficiency of work
6. Performance Evaluation and Skill Assessment	<ul style="list-style-type: none">Conduct skill assessment for district and RP employeesEstablish periodical monthly, quarterly and annual performance review and evaluation, based on the approved operational and financial KPI	<ul style="list-style-type: none">Improve competition on workIncrease working efficiency and accountabilityHelp management to follow up with the accomplished goals and timing

EFFECTIVE MANAGEMENT AND GOVERNANCE IMPROVEMENTS

TALENT MANAGEMENT

Project	Description	Output
7. Management in line with DCEN strategy and goals	<ul style="list-style-type: none">• Defining required number of employees to achieve goals defined with organizational strategic plans• Ensuring that employee / customer ratio is defined based on the field employees to cover operations, not with the total of employees in the company	<ul style="list-style-type: none">• Will enable company to have better coverage during commercial and technical operations• Employee / Customer ratio will improve planning and expectations in operations
8. Strategic Employee Planning	<ul style="list-style-type: none">• Identifying key roles and respective personnel to ensure reaching the goals defined with organizational strategic plan, will help company to achieve set targets	<ul style="list-style-type: none">• Improve planning, monitoring and implementation of operations• Ensuring achievement of the goals and implementing organizational strategic plan
9. Effective Incentive Scheme	<ul style="list-style-type: none">• Aligning the company strategic goals with incentives means recognizing employees, rewarding contributions to success, and acknowledging their value to the organization	<ul style="list-style-type: none">• Will increase effectiveness of work during working hours and working days• Proper checks and balances will increase work efficiency
10. Training and Capacity Building	<ul style="list-style-type: none">• In house and field trainings for revenue protection, commercial operations, enumerations, analysts, etc.• Field trainings for commercial operation employees in the district• Basic and advanced training for analysts on billing and energy data	<ul style="list-style-type: none">• Will improve quality and effectiveness in operations• Increase qualification for the personnel• Improve accuracy of data in billing database

EFFECTIVE MANAGEMENT AND GOVERNANCE IMPROVEMENTS

COMMERCIAL OPERATIONS IMPROVEMENTS

Project	Description	Output
11. Revenue Protection and Loss Recovery	<ul style="list-style-type: none">• Organizing revenue protection unit, changing reporting lines and enforcing preventive, detective and loss recovery measures followed with basic and advanced trainings• Establishing process and interactions with other departments, with strong analytical task• Drafting Standard Operating Procedure• Establishing daily, weekly, monthly reporting• Establishing operational and loss recovery targets• Establishing loss calculation methodology• Enforcing performance evaluation, etc.	<ul style="list-style-type: none">• Increase number of inspections and findings• Improve loss preventive measures, increase detection and recovery of losses measures• Increase responsibility and accountability of the revenue protection teams• Positive effect in loss reduction
12. Meter Reading and Reading Efficiency	<ul style="list-style-type: none">• Re-design meter reading process to ensure proper meter reading coverage, define proper KPI and accuracy targets• Improve monitoring, quality and controls of meter reading• Establish Standard Operating Procedures and action plan with details on the cases without access, faulty meters, not existing meters, abolished and abandoned premises,• Intensify usage of Hand-held Units	<ul style="list-style-type: none">• Improve coverage of customers to be read• Decrease inaccurate and fictive billing data• Improve reporting of inaccurate meter installations, faults, by-passes, etc.• Decrease number of adjustments
13. Billing Process and Billing Efficiency	<ul style="list-style-type: none">• Drafting Standard Operating Procedure to help on: decrease of zero bills, eliminate negative billing, over billing, etc.• Improve process in correction and adjustments• Establish key customer group• Improving billing software	<ul style="list-style-type: none">• Accurate billing efficiency and accurate data on energy losses from not billed energy• Identify problematic areas to focus• Accurate billing of large customers• Increase of revenue

EFFECTIVE MANAGEMENT AND GOVERNANCE IMPROVEMENTS

COMMERCIAL OPERATIONS IMPROVEMENTS

Project	Description	Output
14. Disconnection and Collection Process	<ul style="list-style-type: none"> Established daily, weekly and monthly response reporting based on the district teams Operating Procedures for disconnection and collection Establish daily, weekly and monthly plan for disconnection Abolish hand cash collection 	<ul style="list-style-type: none"> Identify non payers and non existing customers Improve collection and affect in education of customers to respond in time Improve efficiency and effectiveness of work
15. Operational Targets for Region and District	<ul style="list-style-type: none"> Introduce performance management and performance evaluation process Develop smart KPIs for field employees Individual performance evaluation towards set targets 	<ul style="list-style-type: none"> Increase employees discipline and corporate culture Improving work culture Fair target setting and evaluation Improved operations and commercial performance
16. Adjustments / Technical and Financial	<ul style="list-style-type: none"> Revise / Establish procedure to define hierarchy levels of approvals for adjustments in billing database Establish accountability for every adjustment / reasons and responsible persons 	<ul style="list-style-type: none"> Decrease adjustments amount and improve accuracy of data entering in the billing systems. Identify responsible employees who are providing data with errors and make them responsible for it
17. Customer Alignment with Network	<ul style="list-style-type: none"> Establish process in all commercial operations to help in the customer alignment with network Increasing responsibility and accountability of teams in district to provide accurate data from the field Establishing control and monitoring of efficiency and accurate reporting by engaging revenue protection unit 	<ul style="list-style-type: none"> Will help company to know the customers with whom DCEN is doing business Improve planning in operations Improve billing efficiency and collection efficiency Maintain billing database Enable proper energy balance in DTS-s Identify energy loss leakages

EFFECTIVE MANAGEMENT AND GOVERNANCE IMPROVEMENTS

COMMERCIAL OPERATIONS IMPROVEMENTS

Project	Description	Output
18. New Connection and Connection Efficiency	<ul style="list-style-type: none">Establishing process to speed up the time for registering the new customers who are remaining in pending statusEnsuring these customers are not connected in network and not consuming energy during the pending timeEstablishing KPI for responsible departments and positions to ensure that registration will be in set deadlines	<ul style="list-style-type: none">Increase number of active customersIncrease demandImprove cooperation and trust with customersDecrease / eliminate cases of energy consumption during pending status
19. Analyses and Data Access	<ul style="list-style-type: none">Establishing and enforcing data analysts in the regions and DistrictEnsuring that all analysts will have access in the billing and collection data, to make them possible to help operations in daily bases	<ul style="list-style-type: none">Identify areas for orientationImproving operations efficiencyDecrease lossesImprove collectionImprove database maintenance
20. Customer Care and Public Relations	<ul style="list-style-type: none">Establishing proper KPI and deadlines for reply in different type of complaints, with special attentions to the cases of:<ul style="list-style-type: none">energy losses, faulty metersinaccurate readings and billingEstablish weekly and monthly analyses and reporting with risk areas of complaints increases.	<ul style="list-style-type: none">Increase trust and cooperation with customersIdentify areas for improvements and intensifying commercial operationsAssists in loss reductionDecrease of adjustments and errorsIncrease efficiency of solving complaints

EFFECTIVE MANAGEMENT AND GOVERNANCE IMPROVEMENTS

TECHNICAL OPERATIONS IMPROVEMENTS

Project	Description	Output
21. Aggregated Technical, Commercial & Collection Losses	<ul style="list-style-type: none">Introducing new measurement approach in the company to as metric method to measure the DCEN efficiencyEstablishing KPI for each componentEstablishing monthly regional performance report and Districts based on ATC&C	<ul style="list-style-type: none">Improve efficiency in all three main components, technical, commercial and collectionDecrease fraud and improve quality in operations
22. Energy Balance	<ul style="list-style-type: none">Energy Balance between Transmission Substation outgoing feeders and Distribution Substations in pilot areas.Energy Balance in Distribution Substations / incomer energy vs. outgoing feeders energy	<ul style="list-style-type: none">Accurate data of energy receivedDefine technical losses in MV networkDefine energy for each substation
23. Network Alignment, Energy Accounting and Accountability	<ul style="list-style-type: none">Ensuring all grid meters are installed and working properlyEnsuring all incomers and outgoing feeders in distribution substations are metered and read properlyAligning of feeders and distribution transformers to define accurately energy delivered and make them accountable for energy management, billing efficiency and collection.	<ul style="list-style-type: none">Accurate energy accountingAccurate sharing energy based on districtsImprove accuracy of billing efficiencyIdentify feeders with high losses and improve operationsIncrease responsibility of employees
24. Network Condition	<ul style="list-style-type: none">Improve poor condition of conductors, imbalance between phases, overloading and lengthy lines, that can be the reason to have technical losses in the LV grid at above averageFence distribution transformers	<ul style="list-style-type: none">Improve network condition to manage properly the energy and decrease lossesIncrease safety and security of company assets that are open to public access
25. Improve Energy Demand	<ul style="list-style-type: none">Improve efficiency of new customer registrationImprove power management in the areas with high consumption	<ul style="list-style-type: none">Increase of customer number increases the energy demandPermanent energy supply to areas with demand potential

EFFECTIVE MANAGEMENT AND GOVERNANCE IMPROVEMENTS

TECHNICAL OPERATIONS IMPROVEMENTS

Project	Description	Output
26. Meter Installation and Replacement	<p>Network Meter Installations:</p> <ul style="list-style-type: none">- Meter installation in all street lights- Revalidation of commercial customer meters- Locking and sealing of all customer meters- Meter relocation at customer premises- Replacement of old mechanical meters- Periodical Check of all network Meters	<ul style="list-style-type: none">• Knowing energy improves billing efficiency and increase accountability• Customer meters helps on energy accounting and also in collection• Meter relocation, proper commissioning and sealing help company to decrease energy losses
27. Improve Energy Demand	<ul style="list-style-type: none">• Review and design new connection process and procedure• Increase energy demand by increasing number of new connections. The planning and designing of new expansion of network in the DCEN is very important. This will help company to bring in the customer billing database more new connections, and increase demand	<ul style="list-style-type: none">• Efficient new customer registration• Loss recovery• Financial incentives
28. Technical Losses	<ul style="list-style-type: none">• Based on the energy balance to identify technical losses in HV and MV• Improving periodical check of distribution transformers load and load balance	<ul style="list-style-type: none">• Identify areas for network improvement• Decrease number of faulty distribution transformers and decrease technical losses

EFFECTIVE MANAGEMENT AND GOVERNANCE IMPROVEMENTS

INTERNAL CONTROL

Project	Description	Output
29. Controlling the Environment	<ul style="list-style-type: none">• Interviewing the operational managers / staff to ensure that their professional and interpersonal background fits with the assigned positions and responsibilities, focusing on 1. Managerial Skills, 2. Integrity and 3. Moral Values.	<ul style="list-style-type: none">• The control environment enforce internal control to help DCEN to achieve its strategic objectives, operate its business efficiently and effectively, provide reliable reporting to internal and external stakeholders
30. Risk Assessment	<ul style="list-style-type: none">• Proper analyses of Internal Risk• Proper analyses of External Risk	<ul style="list-style-type: none">• Identifying internal and external risk in time, help company to take preventive measures for risk elimination or mitigation
31. Control Activities	<ul style="list-style-type: none">• Establish proper planning and KPI• Daily, Weekly and Monthly Reporting for all functions• Introduce proper field and reporting templates	<ul style="list-style-type: none">• Monitor day to day activities• Control of work efficiency• Increase responsibility
32. Information and Communications	<ul style="list-style-type: none">• Introduce regular weekly, monthly, quarterly and annual meetings• Regional Meetings• District meetings	<ul style="list-style-type: none">• Increase team work efforts• Improve field operations• Increase cooperation between HQ and Regional functions, same between Regions and FBBU.
33. Monitoring	<ul style="list-style-type: none">• Establish monitoring methodologies during operations• Engagement of HQ Inspection Department to ensure proper implementation• Engagement of Revenue Protection to ensure quality of operations	<ul style="list-style-type: none">• Improve quality of work• Increase accuracy and efficiency to achieve goals and targets set by company• Improve accuracy in reporting

Talent Management

Enhance Talent Management in Line with DCEN Strategy and Goals

Initiative 1: Number of Employees in Operations

Initiative 2: Employee / Customer Ratio

TALENT MANAGEMENT

ENHANCE TALENT MANAGEMENT IN LINE WITH DCEN STRATEGY AND GOALS

	Project	Description of the project
1	Number of Employees in Operations	To ensure achievement of company objectives, the planning of required number of employees and allocation of employees in right operations is one of the primary tasks for talent management in the successful company.
2	Employee / Customer Ratio	<p>Key Performance Indicators are the measures that help company to understand whether company is achieving objectives or not. Achievable KPI are linked with quality and effectiveness of work. In this regards, based on the achievable KPI and number of customers, the employee / customer ration should be defined.</p> <p>Customer ratio to cover operations, should be counted based on the field employee who perform operations, to ensure effective coverage of customers. In customer ratio for effective operations, the staff in offices should not be considered in all cases.</p>

Disconnection and Collection Process

Initiative 1: Establish system based disconnection cycle

Initiative 2: Re-organizing disconnection teams

Initiative 3: Abolishing cash collection on hand

OPERATIONAL IMPROVEMENTS – COMMERCIAL OPERATIONS

DISCONNECTION AND COLLECTION PROCESS

Project	Description of the project
1	<p>Establish system based disconnection cycle</p> <p>Planning, execution and reporting of the disconnection cycle must be system based. All disconnection orders must be generated from the disconnection cycle, which must be generated through the system on the monthly bases, and all job orders must contain customers detail data and arrears. Disconnection job orders must be generated on a daily bases. Disconnection orders must be planed based on the Feeders and DT-s,</p>
2	<p>Re-organizing disconnection teams</p> <p>Increase disconnection efficiency, by improving operational plans and strict disconnection of non-paying customers. Targeted number of disconnections to be performed on a daily basis by each team. Disconnection teams will be issued daily disconnection lists, whereby each disconnection team will be allocated at least the minimum number of disconnections, and separated based on feeders and transformers in the areas of their coverage. Daily/monthly, data analyses for disconnections performed by teams in districts.</p>
3	<p>Abolishing cash collection on hand</p> <p>Cash collection on hand as a bill payment should be abolished. But before removing this practice, utility company should ensure massive and aggressive public awareness campaign to promote new payment methods and educate customers.</p>

Aggregated Technical, Commercial and Collection Losses

Initiative 1: Technical Losses Improvements

Initiative 2: Process for overloaded feeders and transformers

Initiative 3: Load balance management

Initiative 2: Commercial Losses Improvements

Initiative 3: Collection Losses Improvements

OPERATIONAL IMPROVEMENTS – INDEX TO INDICATE LOSSES

TECHNICAL, COMMERCIAL AND COLLECTION LOSSES

Project	Description of the project
1	<p>Technical Losses</p> <p>Implementing proper energy balance in HV, MV and LV, will give possibilities to identify energy who is losing in the network, before going to the end customer. This depends on the quality and integrity of the grid meters in all network levels. Technical losses are attributed to the aged network and poor network configuration and maintenance. Periodical process for inspection of substations and feeders will help company to identify potential overloaded feeders and transformers that need interventions to manage their load. This will help company to decrease technical losses caused by the overloaded or under loaded transformers and also will help to reduce number of damaged / burned transformers.</p>
2	<p>Commercial Losses</p> <p>Commercial losses refers to the difference between the energy sent to the customers and energy billed to the customers. Commercial losses are mainly attributed to the energy theft, unauthorized use of electricity, improper reading, billing and other errors in commercial operations.</p>
3	<p>Collection Losses</p> <p>Collection Losses results with difference between energy amount billed to the customers versus collection amount. The amount remaining not collected in one period, is counted as collection losses. Collection losses are results of non payment of customers for their consumed energy.</p>

Energy Balance

Initiative 1: MV Energy Balance

Initiative 2: LV Energy Balance

OPERATIONAL IMPROVEMENTS – TECHNICAL OPERATIONS

ENERGY BALANCE

Project	Description of the project
1	<p>Medium Voltage Energy Balance</p> <p>Energy balance between substations incomer energy and outgoing feeders from substation will enable DCEN to determine technical losses in the substation level.</p> <p>To do this, proper alignment of network with substations should be in place, metering in incomers and outgoing from each substation and interconnection between substations should be identified.</p>
2	<p>Low Voltage Energy Balance</p> <p>Energy balance between feeder and distribution transformers is one of the most important energy balance in the LV for Ferdowsi District. This will enable Ferdowsi District to determine areas where the energy commercial and technical losses are high, based on the distribution transformers.</p>

OPERATIONAL IMPROVEMENTS – TECHNICAL OPERATIONS

INITIATIVES: ENERGY BALANCE

Project Details		Benefits	Stakeholders	Timeline
<div>I</div>	MV Energy Balance <ul style="list-style-type: none"> - Install modems on all income meter-points to make available access in AMR (automatic meter reading) system for DISCO team, to collect data efficiently and accurately online; - Install “Revers” meters at each boundary points between substations and outgoing feeder-lines. - Re-align feeders with each substation; - Identify all interconnections between distribution substations with possible supply from other feeders; - Ensure that all transmission outgoing feeders have meters and meters are functional; - Updated energy balance database with proper alignment of network to ensure automated energy balance. 	<ul style="list-style-type: none"> - Define Energy for each substation; - Identify technical losses in different network levels; 	<ul style="list-style-type: none"> - Network - Technical 	2022 / Q3,4

Network Alignment, Energy Accounting and Accountability

Initiative 1: Network Alignment

Initiative 2: Regional and District Energy Accounting

Initiative 3: Improve Accountability for Energy

OPERATIONAL IMPROVEMENTS – TECHNICAL OPERATIONS

NETWORK ALIGNMENT, ENERGY ACCOUNTING AND ACCOUNTABILITY

	Project	Description of the project
1	Network Alignment	Proper network alignment is very important for energy accounting, energy balance and identify losses. On a district level, distribution transformers, as well as feeder-line meters are not registered in the billing system, having negative impact on accurate process of calculation of energy balance, as well accurate evaluation of controllers/reader and chief inspector performance.
2	District Energy Accounting	Proper alignment of network with districts will enable Ferdowsi District to account for the energy delivered. Knowing energy received enables districts to have better planning and implementation of commercial operations.
3	Improve Accountability for Energy	Defining energy for districts should go parallel with identification of key roles who will be accountable for any leakage in energy or collection based on the energy received. Missing this information, DCEN will not have chance to identify the regional performance and monitor performance efficiency of districts.

OPERATIONAL IMPROVEMENTS – TECHNICAL OPERATIONS

INITIATIVES: NETWORK ALIGNMENT, ENERGY ACCOUNTING AND ACCOUNTABILITY

Project Details		Benefits	Stakeholders	Timeline
I	<p>Network Alignment</p> <ul style="list-style-type: none">- All technical assets including feeder-lines and distribution transformers must be verified in the field by substations and immediately must be uploaded to the billing system including meter numbers, ratio of current transformers, readings etc.- Same approach must be implemented related to individual customers, especially under area which were recently added to Ferdowsi District such as, Rudaki, Dariokanor, Obkhorez, Orion, etc.- Due diligence and verification of network by feeder-lines to identify actual quantity of distribution transformers by feeder-line.- Also would be appropriate to use GIS system analogue to map all technical assets properly.- Development of SOPs related to data exchange to ensure fast track and efficient upload process of uploading DTs by feeder-line to keep billing database updated to ensure accurate energy balance accounting process.	<p>Improve and proper energy balance Proper network mapping</p>	<ul style="list-style-type: none">- Network- Technical	<p>2022 / Q3,4</p>

Takeaways

Conclusions

PCA Target

TAKEAWAYS

CONCLUSIONS

PCA Target

- Although Ferdowsi District reports a high collection rate for billed electricity, the high losses result from only 70% of the electricity being delivered to the region actually being billed to customers.
- DCEN's performance in the Ferdowsi District is most adversely affected by the following key factors, which combine to contribute to the high level of losses seen in the region (+30%):
 - Inefficient commercial operations, namely poorly implemented disconnection policy which impacts revenue collection;
 - Insufficient business processes that are not entirely in alignment with the needs of the organization;
 - Lack of loss localization initiatives to target loss reduction and revenue protection activities;
 - Lack of a performance management system for staff and a supporting pay/reward scheme;
 - Absence of some critical training needs for the staff, especially those in more technical areas of operation; and,
 - Lack of proper checks and balances aimed at protecting revenues and supervising field operations.
- For the implementation phase, the PCA team will focus on:
 - Revamping commercial processes, reducing the reading period to allow more time for revenue management activities and to improve the accuracy of the electricity balance;
 - Exploiting the metering technology already in place on feeders and distribution transformers to localize losses and correctly account for energy;
 - Establishing new target setting and appraisal practices, introducing new incentives and measures to improve staff performance and discipline;
 - Institutionalizing control and revenue protection activities in the region, introducing stronger internal controls; and,
 - Providing training to staff including daily on the job supervision.
- It should be noted that DCEN's network conditions are sufficient to allow for commercial performance improvement. Metering is not as large a problem given that all customers within the region are equipped with some type of metering device, albeit it may be old or obsolete but there is at least a metering infrastructure in place.

TAKEAWAYS

CONCLUSIONS

PCA Target

- PCA is confident that the main benefits to DCEN as a result of our contribution will be in terms of loss reduction and revenue improvements, which will result from our commercial driven business approach, one which following successful demonstration in the district will be replicated elsewhere in the company.
- As can be seen from the graphs below, in the last two years the Ferdowsi District faced decrease in their commercial performance. This effort will focus on putting the district on a new improved performance trajectory.

TAKEAWAYS

CONCLUSIONS

PCA Target

- Importantly, USAID has been successful in demonstrating performance improvements in utilities in far worse conditions than what is found in the Ferdowsi District, and the abovementioned improvement oriented initiatives do not require large scale additional investments from DCEN.
- In the first 12 months, PCA anticipates achieving the following loss reduction and revenue improvement figures within the Ferdowsi District. Of course, replication to other regions of DCEN represents the major objective for this effort, given the impact it can have on the overall company performance.
