

БАКТЕРИИ

A detailed microscopic image showing various types of bacteria. In the foreground, there are several chains of spherical (cocci) bacteria. Some are arranged in long, straight lines, while others are in shorter chains or small clusters. The bacteria have a distinct, slightly textured surface. The background is a dark, reddish-purple color, which makes the lighter-colored bacteria stand out. The overall composition is dense with different bacterial forms, illustrating the diversity of these microorganisms.
