

БАКТЕРИИ

A detailed microscopic image showing various types of bacteria. In the foreground, there are several chains of spherical (cocci) bacteria, some appearing as pairs or small groups. There are also larger, more complex structures, possibly spore-forming bacteria or larger cocci. The background is filled with more numerous, smaller chains of bacteria, creating a dense field of microbial life. The colors are primarily purple and blue, with some yellowish highlights, suggesting a specific staining technique like Gram stain.
