

Creating a New Language

Many of the millions of messages are not in the form of speech, but in the form of the written word.

Instead of speaking into the handset, a growing number of mobile-phone users-especially youths-are using a facility called the Short Message Service (SMS).

This service allows them, at relatively little expense to type and send brief messages to each other.

About 30 billion messages are exchanged every month world wide.

What are these messages about?

A British study discovered that 42 percent of youths between the ages of 18 and 24 use SMS to flirt, 20 percent use to ask a person out on a date, and 13 percent have used SMS to end a relationship.
