

# Научные базы статей

НИИ Уронефрологии и репродуктивного  
здоровья человека  
Р.И. Слусаренко

□ **MEDLINE** это крупнейшая библиографическая база статей созданная **Национальной медицинской библиотекой США (NLM)**, которая содержит более 26 млн научных биомедицинских абстрактов.

□ Отличительной особенностью является то, что записи из MEDLINE индексируются с помощью медицинских предметных рубрик (MeSH®).

## Разделы базы MedLine

**Собственно MedLine** - охватывает около 12 миллионов цитат статей, опубликованных с 1966 года

**OldMedLine** - содержит 1,7 миллиона цитат статей, опубликованных с 1950 по 1965 годы.

**PreMedline** - публикации, которые еще не вошли в Medline

Каждый год в MedLine добавляется около полумиллиона новых цитат и абстрактов.

Немного статистики:

- Включает статьи с 1946 года
- Охватывает около 75 % мировых медицинских изданий
- Ежедневно добавляются 2,000-4,000 рубрикаций
- Содержит более 26 млн научных биомедицинских абстрактов

# Embase<sup>®</sup>

- <https://www.embase.com/login>
- Содержит более 30 млн научных публикаций с 1947 года.
- Индексирует более 8 500 журналов
- Индексирует более 6 млн публикаций в более 2900 журналов которые не индексируется MEDLINE
  - Больше европейских и японских журналов
  - Больше журналов не на английском
- Имеет собственную систему индексирования типа MeSH (Emtree)
- **Платный доступ**
- **Наш университет имеет подписку на Embase**

# Scopus

- Очень большая **реферативная** база статей
- Индексирует более 19 500 журналов
- Включает в себя **не все** статьи из PubMed и Embase с 1996 года
- Scopus индексирует меньше журналов => содержит меньше публикаций
- Не имеет subject index (**MeSh**)
- Scopus предоставляет **индекс цитирования** благодаря чему мы можем судить о качестве научных публикаций
- **Платный доступ**
- **Наш университет имеет подписку на**

# WEB OF SCIENCE™

- **Реферативная база статей**
- Индексирует более 12 700 **наиболее влиятельных журналов**
- Не имеет subject index (MeSh)
- WoS так же предоставляет **индекс цитирования** благодаря чему мы можем судить о качестве научных публикаций
- **Платный доступ**
- **Наш университет имеет подписку на WoS.**
- Глубина базы зависит от подписки (ММА с 1989г.)

Другие....

**PublMed**

The logo for PublMed features the word "PublMed" in a bold, blue, sans-serif font. The letter "l" is black and has a white, curved shadow on its right side, giving it a 3D effect. The letter "M" is white and is set within a blue, rounded rectangular shape that also has a white, curved shadow on its bottom edge, making it appear to float above the rest of the text.

Существует несколько интерфейсов, с помощью которых осуществляется доступ к библиографической базе статей - MEDLINE.

## A Systematic Review and Meta-Analysis of Nutritional Supplementation in Chronic Lower Extremity Wounds.

Ye J<sup>1,2</sup>, Mani R<sup>3,4,5</sup>.

### Author information

#### Abstract

A systematic review and meta-analyses of nutritional supplementation to treat chronic lower extremity wounds was done in order to test the premise that impaired nutrition is implicated in healing. The databases of Ovid MEDLINE, Ovid EMBASE, Cochrane Library, and EBSCO CINAHL (1972-October 2014) were searched systematically. Only randomized controlled trials in adults with chronic lower extremity wounds were included. Both topical and systemic routes of supplementing nutrition were considered. The primary outcome was wound healing. Study characteristics, outcomes, and risk of bias were extracted by trained researchers and confirmed by the principal investigator. Twenty-three of 278 (8.3%) retrieved articles met the inclusion criteria and were selected. Most of the studies were of unclear or low risk. Overall, nutritional supplementation was favorable (risk ratio [RR] = 1.44, 95% confidence interval [CI] = 1.25-1.66). The systemic route was marginally better than the topical one (RR = 1.51, 95% CI = 1.36-1.67; RR = 1.14, 95% CI = 0.96-1.36, respectively). For venous ulcers, the data showed nutritional supplementation to be significantly beneficial compared to placebo (RR = 1.44, 95% CI = 1.31-1.59). Similar data were found for diabetic foot and sickle cell ulcers (RR = 1.17, 95% CI = 0.93-1.47; RR = 1.56, 95% CI = 0.94-2.60, respectively). These data permit the inferences that nutritional supplementation in the populations studied showed significant benefits in the healing of

## Resveratrol changes spermatogonial stem cells (SSCs) activity and ameliorates their loss in busulfan-induced infertile mouse.

Authors: Wu, Chongyang, Zhang, Ying, Shen, Qiaoyan, Zhou, Zhe, Liu, Weishuai, Hua, Jinlian ...

Journal: Oncotarget, 2016

UNASSIGNED: The decline of quantity and quality of sperm are correlated with the increasing age and some anti-cancer compounds such as busulfan. Previous studies have shown that Resveratrol (Res) inhibits tumorigenesis and metastasis of many cancers including mammary tumor, prostate and pancreatic cancers. It acts as anti-age in mouse and human, however, little is known about its protective effect on aged spermatogonial stem cells (SSCs). Here, we investigated the effects of Res in vitro on SSCs using C18-4 cells and in vivo in busulfan-induced azoospermia mice model. The results showed that Res at different concentrations had different effects on C18-4 cells. Treatment with 2 μM of Res promotes cell proliferation and inhibits apoptosis but stimulates apoptosis with a higher

2. **Functional electrical stimulation for management of urinary incontinence in children with myelomeningocele: a randomized trial.**

[Kaibafzadeh AM](#)<sup>1</sup>, [Sharifi-Rad L](#), [Ladi Seyedian SS](#), [Masoumi A](#).

 **Author information**

**Abstract**

**PURPOSE:** To report the efficacy of transcutaneous functional electrical stimulation (FES) in children with refractory neuropathic urinary incontinence secondary to myelomeningocele (MMC).

**METHODS:** Thirty children with history of MMC (12 girls and 18 boys, mean age  $6.7 \pm 3.6$  years) with refractory urinary incontinence were enrolled in this study. They were randomly allocated to treatment (FES, 15 children) and control (sham stimulation, 15 children) groups. All patients underwent urodynamic study (UDS) before and 6 months after FES considering detrusor leak point pressure (DLPP), mean maximal detrusor pressure, and mean maximal bladder capacity. Daily incontinence score, frequency of pad changing, and enuresis were also assessed before and 6 months after treatment. A 15-course FES was performed for 15 min and 3 times per week. Children were followed for at least 6 months.

**RESULTS:** Of UDS variables, DLPP increased significantly from  $32 \pm 10.7$  cmH<sub>2</sub>O before treatment to  $55.6 \pm 24.9$  cmH<sub>2</sub>O in treatment group after 6 months ( $P < 0.03$ ). Daily incontinence score (range 0-3) improved significantly in treatment group from  $2.7 \pm 0.4$  before treatment to  $1.3 \pm 0.9$  after treatment compared with sham stimulation group ( $P < 0.02$ ).

**CONCLUSION:** This type of electrical stimulation is a safe, noninvasive, and effective modality to improve urinary incontinence in myelomeningocele children and can be used at home.

## Urinary incontinence and prostate cancer: a progressive rehabilitation program design.

Serdà BC<sup>1</sup>, Marcos-Gragera R.

### ⊕ Author information

#### Abstract

**PURPOSE:** To design and implement a rehabilitation program based on pelvic floor muscle training (PFMT) to improve the urinary incontinence (UI).

**METHODS:** This study is based on a randomized clinical trial. The sample was formed by 66 participants with prostate cancer. The intervention groups were randomized into an experimental group (EG) and a control group (CG). The variables studied are: waist perimeter, variables related to the evolution of UI, muscular strength, and quality of life (QoL). Measurements were taken in order to evaluate changes in both groups. A statistical analysis was conducted using the Student-Fisher t-test, the Mann-Whitney-Wilcoxon test, and the chi-square test.

**FINDINGS/CONCLUSIONS:** After 24 weeks an improvement was identified in the EG compared with the CG, in waist perimeter ( $p \leq .001$ ), variables related to the UI symptom, intensity, frequency, difficulty and limitation of activity ( $p \leq .0001$ ). A correlation between UI and QoL was observed ( $p = .039$ ).

**CLINICAL RELEVANCE:** The improvement in QoL is mediated indirectly by the improvement in the UI symptom.

# Как сформировать запрос ?

- PubMed позволяет использовать следующие логические операторы между поисковыми терминами:
- **AND** (и) - в случае, если два или более термина должны быть найдены в одном документе  
"AND" = "пробел"
- **OR** (или) - в случае, если хотя бы один из терминов должен быть найден в документе
- **NOT** (не) — в случае, если только один термин должен быть найден в документе, а второй должен обязательно отсутствовать.
- Чтобы **найти целую фразу**, а не отдельные слова, заключите ее в кавычки (" ").
- Например: " urinary incontinence ".

## Поиск по предметным рубрикам (**MeSH Search**)

С помощью базы данных предметных рубрик Medical Subject Headings (**MeSH**) можно выбрать наиболее точный термин из словаря предметных рубрик (тезауруса), выражающий содержание поискового запроса.

**Использование MeSH увеличивает полноту и точность поиска.**

## **База данных предметных рубрик позволяет:**

- выбирать нужные MeSH термины для поиска, базирясь на их определениях;
- ограничивать поиск только **основными** (major) MeSH терминами, представленными в статье;
- выбирать нужные **подрубрики** (sub-headings);
- видеть MeSH термины в иерархической (от общего к частному) последовательности и **выбирать нужные термины из иерархической структуры**, если введена перекрестная ссылка.

#### 1. Translational approaches to the treatment of benign urologic conditions in elderly women.

Lee C<sup>1</sup>, Chermansky CJ, Damaser MS.

#### Author information

#### Abstract

**PURPOSE OF REVIEW:** Stress urinary incontinence, overactive bladder, interstitial cystitis/painful bladder syndrome, and underactive bladder are highly prevalent among elderly women, and have significant impact on quality of life; however, existing treatments are limited and are not always successful for all patients. Researchers are investigating a multitude of new therapies to treat these conditions. This review will summarize the recent literature on investigative therapies for these conditions.
