

2nd International Summit

**Yerevan, Armenia
October 22-23,**

**Osteoporosis,
current situation in Republic of Moldova**

Ludmila Murzac ,

Dr. Neurologist,

Member of Association for Prevention Osteoporosis of Republic of Moldova,
Orthopedic Shop Owner

www.osteoporoz.md

Epidemiology

- Association of Osteoporosis Prevention has been created and registered with the Moldovan Ministry of Justice in 2004.
- The President (Head) of the Association is Angela Chicu
- The main goal of the Association is to inform the Moldovan society about the prevention measures of the osteoporosis.

www.osteoporoza.md

Epidemiology

- It should be noted that due to the difficult social and economic situation of the Republic of Moldova as well the exodus of people the osteoporosis represents a bleach spot of the official state statistics of Moldova.

www.osteoporoza.md

Demographical situation

- The Republic of Moldova is a small country located in the South East of the Europe between Romania and the Ukraine.
- According to the official data the population of the Republic of Moldova represents **3.050.852** people (unofficial information: about **2 million**) in 2017.

www.osteoporoza.md

Demographical situation

- Male – 1.507.363; female 1.543.489; people older than 50 – 1.102.241 and more than 70-years – 245.372
- The number of work able population has decreased in the last years due to the migration and aging.

Osteoporosis in the Republic of Moldova

- No statistical data exist in Moldova. These data can be collected only partially and from various unofficial sources by our Association.
- According to the official data on nation wide there is the National Protocol of the Osteoporosis updated in 2018 which refers to the relevant data for Europe and USA. But it mentions that “these figures could be also extrapolated for the Republic of Moldova; perhaps with a more severe impact”.

www.osteoporoza.md

Osteoporosis in the Republic of Moldova

- Considering the lack of any official statistical data, It is practically impossible to collect the information on this matter.
- We managed to visit the hospitals in Moldovan districts to discuss with various specialists directly handling the osteoporosis related cases (rheumatologists, family doctors, radiologists and even management).

www.osteoporoza.md

Osteoporosis in the Republic of Moldova

- The results of our investigation are not very encouraging.
- There is not official data regarding the fracture of coxo-femoral joint. But according to the data collected from the hospitals where the patients come in 100% cases, these are about 8.000 cases to 100.000; post-surgery death rate is about 2%.

www.osteoporoza.md

Osteoporosis in the Republic of Moldova

- There are about 3.000 to 100.000 cases of fractures spinal medulla.
- In the Republic of Moldova the costs of the surgery treatment of hip fractures are covered by the state budget in approximate amount of MDL 50.000-80.000 per patient (Euro about 2.500-4.000)
- The recovery of the patient usually takes place at home and costs more than MDL 10.000 lei (Euro about 500) + the expenses for the work of the people carrying out the patient.

Osteoporosis in the Republic of Moldova

- The length of hospitalization period of the hip fracture patient is between 5-12 days.
- It should be also mentioned that the prostheses are not always the best in terms of quality. The patients have therefore to pay themselves the costs of these prostheses and the post surgery recovery.

www.osteoporoza.md

Osteoporosis in the Republic of Moldova

- There are about 10 devices for osteodensitometry in a functioning condition and 2 DEXA in Moldova.
- Last year at the Moldovan Institute of Neurology and Neurosurgery 2.161 persons were investigated using DEXA, one of the 2 devices in the country. Approximately 950 of them had Osteoporosis Diagnosis, 769 had osteopenia and 442 without pathology.

Osteoporosis in the Republic of Moldova

- Osteoporosis represents an important issue the population should be informed about. This needs an additional funding. Because there are major scientific achieves now that the people are not able to make use of due to the lack of information.
- I propose the idea of funding the programs helping Moldavian people with osteoporosis to have a fulfilling life.
