ABOUT RABBIT

- The rabbit is one of the fastest of all the smaller animals, with hares being able to move at speeds of around 45mph. The strong hind legs of the hare, combined with the large feet of the hare give the hare the ability to run so quickly. The hare is also able to jump over large distances with great ease. Hares have very long ears with along with their accurate sense of smell. There are over 30 different species of hare found close to farm land and open forests world wide.

**RABBITS COLOUR: GREY,
AND ETC.**

, BROWN

**THEY LOVE TO EAT GRASS, APPLE,
CARROTS OR SALADS.**

HISTORI

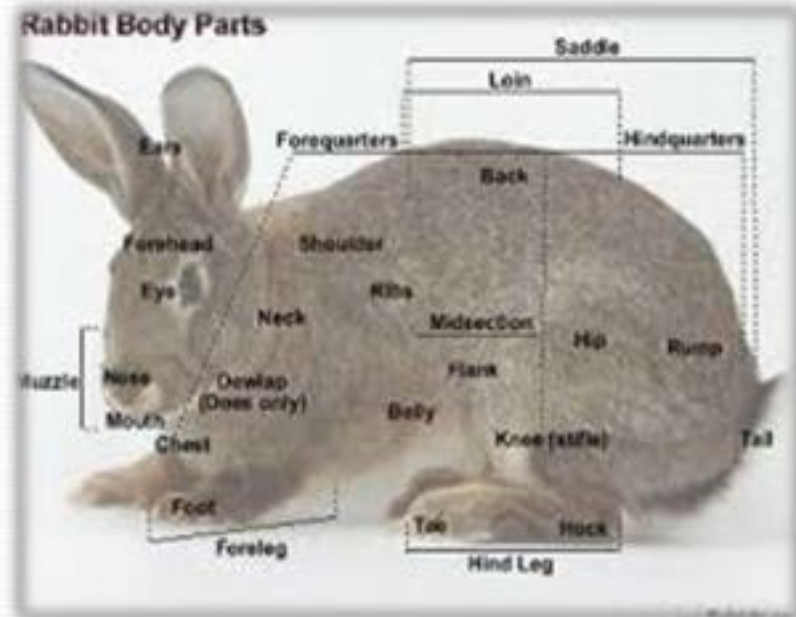

- ◉ Rabbits have an excellent sense of smell, hearing and vision. They have nearly 360° panoramic vision, allowing them to detect predators from all directions. They can see everything behind them and only have a small blind-spot in front of their nose.
- ◉ Rabbits have extremely strong hind limbs which allow them to leap great distances. They can jump up to one metre high and three metres long.
- ◉ Rabbits are territorial animals which live in loosely organised social groups. They live in warrens comprising of an intricate series of underground tunnels with different entrances and exits.

A photograph of a small, greyish-brown rabbit sitting on the ground in a natural, outdoor setting. The rabbit is facing right, with its ears perked up. The background is a blurred natural environment with some green grass and brown earth.

About 24 rabbits set loose in Australia grew to a population of 10 billion in about 67 years. Years of geographic isolation has left the continent with no natural predator for this new invasive species. They migrated across Australia at a rate of 80 miles a year
