

FLOWER HOUSE

Brighten your home

FLOWER HOUSE

Brighten your home

1 Start with a **squeaky** clean vase.

2. Add the flower food

3. Fill the vase with water

4. Sort the flowers;
- Short strong
- Tall strong
- Soft stems

5. Cut 1-2cm off the end of the stems.

6. Create your own design!

design

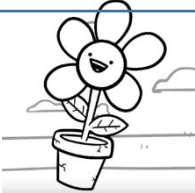

Refresh water every 3 days (repeat step 1-5 and rinse the end of the stems)

Vase cleaning tip: Fill your vase with hot water and add a few drops of bleach to kill all bacteria, then clean the vase with hot water and detergent and rise it well.

flower food is a mix of ingredients that help flowers to absorb water but this magic flower power also keep the pH value of the water low and prevent mold and bacteria.

Design (flower eating)

Design (flower drinking)

Use luke warm water so that the flower superfood dissolves perfectly and the flowers can absorb the water with the flower food directly

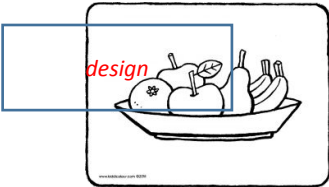

Design (show end of stem with knife – 45degree angle)

Place each flower in the vase right after cutting – so the end doesn't dry up!

design (show stems crossed)

Start with middle length stems to create a strong frame, then add the tall strong stems and finish with the weak stems. Fill the gaps and alternate in colors to create a beautiful design.

design

Place your bouquet in a cool, draft-free area in the house. Avoid direct sunlight and fruit bowls.
