

# MINECRAFT

## *Information*

Minecraft is an indie sandbox with survival elements and an open world. By style, the game world consists entirely of blocks (terrain, objects, mobs, player), and low-resolution textures (16 x 16 pixels) are used for texturing.

# Mobs (Мобы)

**Mobs (short for a mobile object - a moving object) are living moving objects controlled by artificial intelligence. Mobs can be hostile (враждебными) and friendly (Дружелюбными), like pigs.**

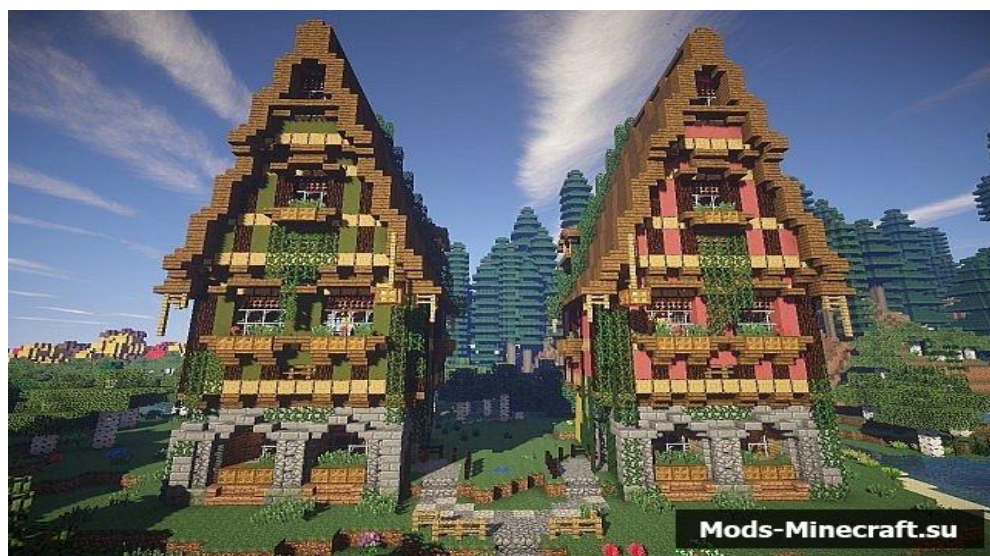

# Creation (Творчество)

Creative is one of the modes in minecraft in which you have a huge amount of possibilities. For example, immortality and an infinite number of blocks with which you can create beautiful castles, build houses, even design a huge city or create a complex mechanism.

# Survival

Survival - Another of the Minecraft modes, whose goal is to survive by collecting resources, creating structures, killing mobs and exploring the world. In survival mode, players have an inventory in which you can store various items, as well as create various items on a workbench.

# Hardcore (Жестокый режим игры)

Game over!

Hardcore - The third game mode, a type of survival mode in which, after the death of a player, the world is deleted.

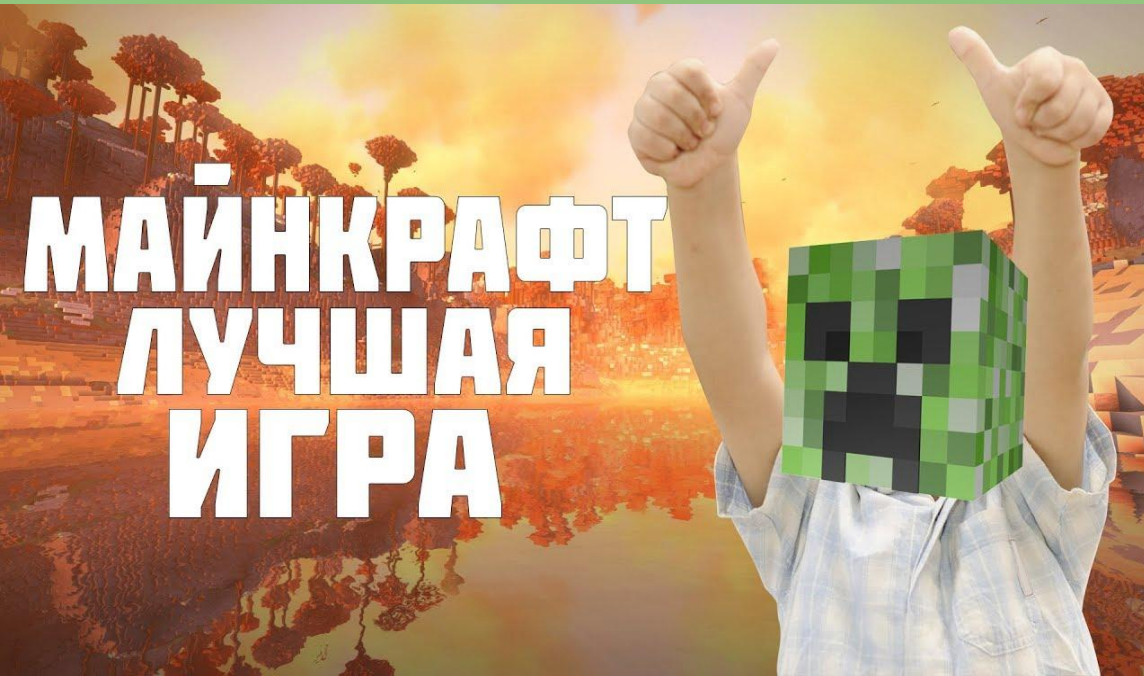

You cannot respawn in hardcore mode!

Delete world

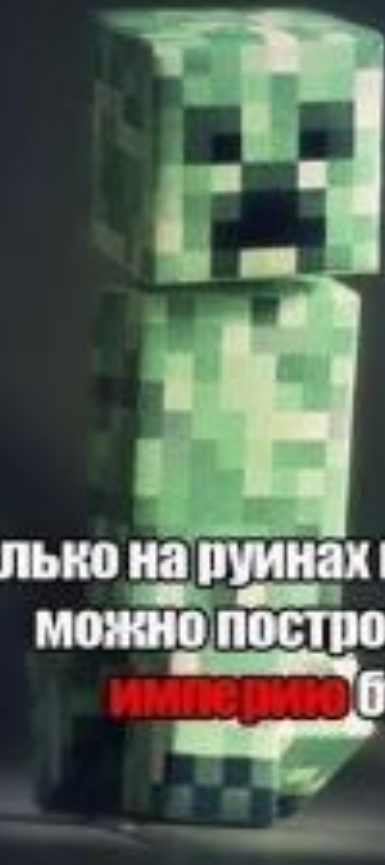

# Conclusion (Вывод/Заключение)

My review: Minecraft is the best game in the world, I like its textures, worlds, modes, etc. Therefore Minecraft is the best game in the world.
