- 2 Polar bears spend a lot of time *on small islands / on sea ice*.
- 3 Global warming *is / isn't* a danger to polar bears.

read the text and check your answers

Will there still be polar bears in the world in 2100?

Polar bears need sea ice to hunt, rest and travel. But the ice in the Arctic is melting because of global warming. Scientists believe that some time between 2059 and 2078 there **will be** no sea ice in summer in the Arctic Sea. The polar bear's habitat will become smaller and smaller. Bears **won't get** enough food in the summer; they won't be able to feed their young and many bears will die in winter.

There are now between 20,000 and 25,000 polar bears in the world. Some scientists predict that sixty percent **will disappear** before 2050. **Will** they all **die** before the end of the century?
