

# KINDERGARTEN

I believe that in kindergarten children should play and create more

learning should take place in a playful way so that children are interested  
Kindergarten will be taught a foreign language, mathematics and their native language.  
but from creativity it is modeling, music, drawing  
teachers should be wise and fair, because in childhood character is formed

# PRIMARY SCHOOL

in my opinion the most important time is primary school

I think that elementary school is grade 1-6. at this time, children learn the basis. Reading, writing, computing, besides this, schoolchildren become familiar with such subjects as biology, physics, geometry, chemistry, geography, history, social studies, but these subjects, or rather their fundamentals, appear from grade 5 these items will be something like circles, but included in the mandatory schedule. I think this is right, because children know the world, and also determine what they like and what does not

# SECONDARY SCHOOL

the main task of the secondary school is to deepen the child's knowledge in favorite subjects

secondary school grades 7-9. It will be divided into classes with in-depth study of a particular subject. This will be confirmed by an exam at the end of grade 6. This exam will take into account knowledge in a particular subject, as well as the desire of the student to study the subject.

secondary school building should be large enough, because there will be quite a lot of classes, because the school will be formed from several primary schools. Because of this, children will meet new people with similar interests. Particular attention will be paid to the profile of the class, but no one has forgotten about the main subjects. Also continue to exist clubs in the subjects, except for them there are still creative clubs

# HIGH SCHOOL

main task to help with the choice of profession

high school 10-11. They are not obligatory, but with their help a person will understand what his ideal profession is. In grades 10-11, the school organizes internships in different places, and also helps students choose their own path. so teens will understand the real experience, besides, it is not superfluous.
