Introduction to cargo systems and handling

Shipping industry value chain

Cargo handling systems

Classification of cargo ships

Cargo type

- Bulk carrier (Dry bulk)
- Container ship
- RO RO ship
- Tanker (Crude, Product, Chemical)
- Gas Tanker (LNG, LPG)
- General cargo

Trade

- Liner
- Charter (Tramp)

Container stowage

Liner Shipping – Container fleet

Container fleet:

	Size ('000 Teu)	Jan 08 No.	Teu
Feeder	<1,000	1,231	718
Handsize	1,000-1,999	1,158	1,635
Intermediate	2,000-2,999	675	1,702
Panamax	3,000-4,999	716	2,820
Post-Panamax	5,000-7,999	424	2,525
Large	8,000-9,999	144	1,229
Very Large	10,000+	9	115
Total		**4,324**	**10,662**

Container ships – key terms

Dimensions:

- LOA
- Beam
- Draft
- Air-draft

Capacity:

- TEU, FEU
- Displacement
- Deadweight
- Gross and Net Tonnage

Containers

Standard Dimensions (feet)

Breadth 8 feet

Height options		Length options	Other Lengths
8.0	not common	20 Standard	45 feet
8.5	Standard	40 Standard	53 feet
9.0	not common		
9.5	Hi Cube

General Cargo and RO-RO

Topics:

Ship layout

Stowage considerations

- Volume and weight
- Stability & stress
- Cargo protection & security
- Causes of cargo damage

Cargo plans

Cargo securing

Deck cargoes

Heavy cargoes

RO-RO ships and cargoes

Car Carriers

Readings 1.1, 2.1, 2.2

Video: RO-RO Safety

General Cargo

Multipurpose cargo ship

General Cargo Ships - Tweendecks

Source: UK P&I Club

General Cargo

Use of Dunnage:

- protect cargo from moisture
- assist in ventilation
- evenly spread the load of heavy stows
- provide separation of cargo.
- secure cargo by filling in broken stowage

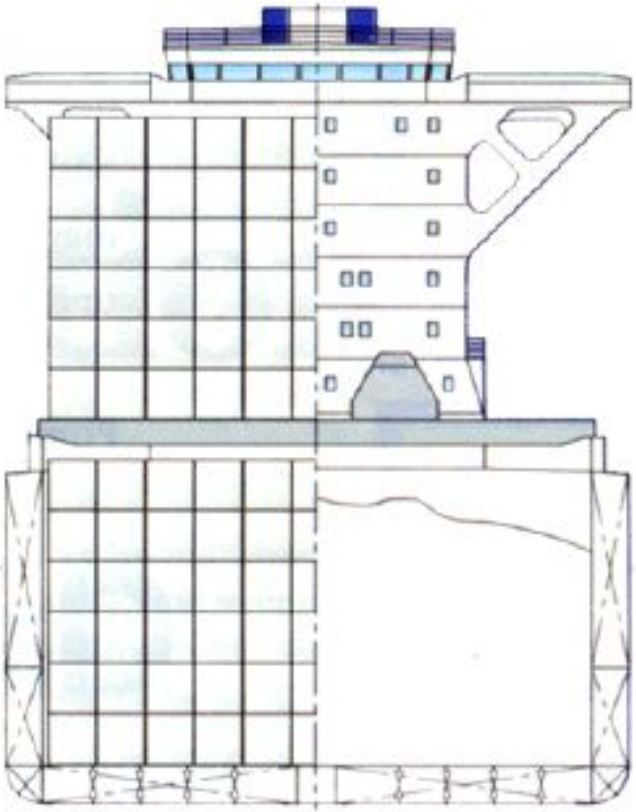
Source: UK P&I Club

General Cargo – Planning for stowage

Stability considerations:

- Weights – top/bottom
- List
- Trim

Top weights reduce stability



Bottom weights improve stability

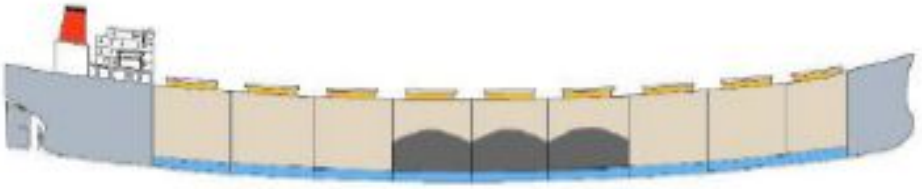
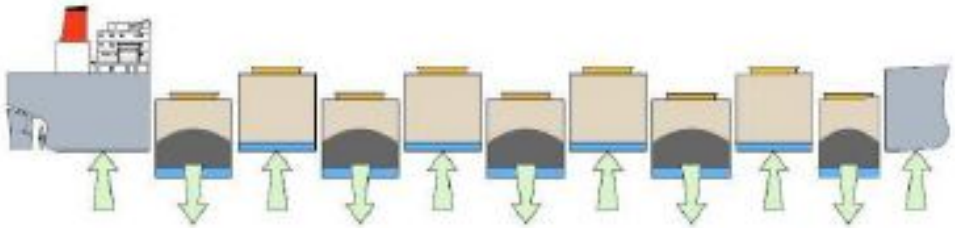
General Cargo & RO-RO

General Cargo – Planning for stowage

Distribution of cargo:

- Avoid stress





General Cargo – Planning for stowage

Protection and security of cargo:

http://www.nkkk.com.sg/CargoSurvey.htm

Some causes of cargo damage/loss

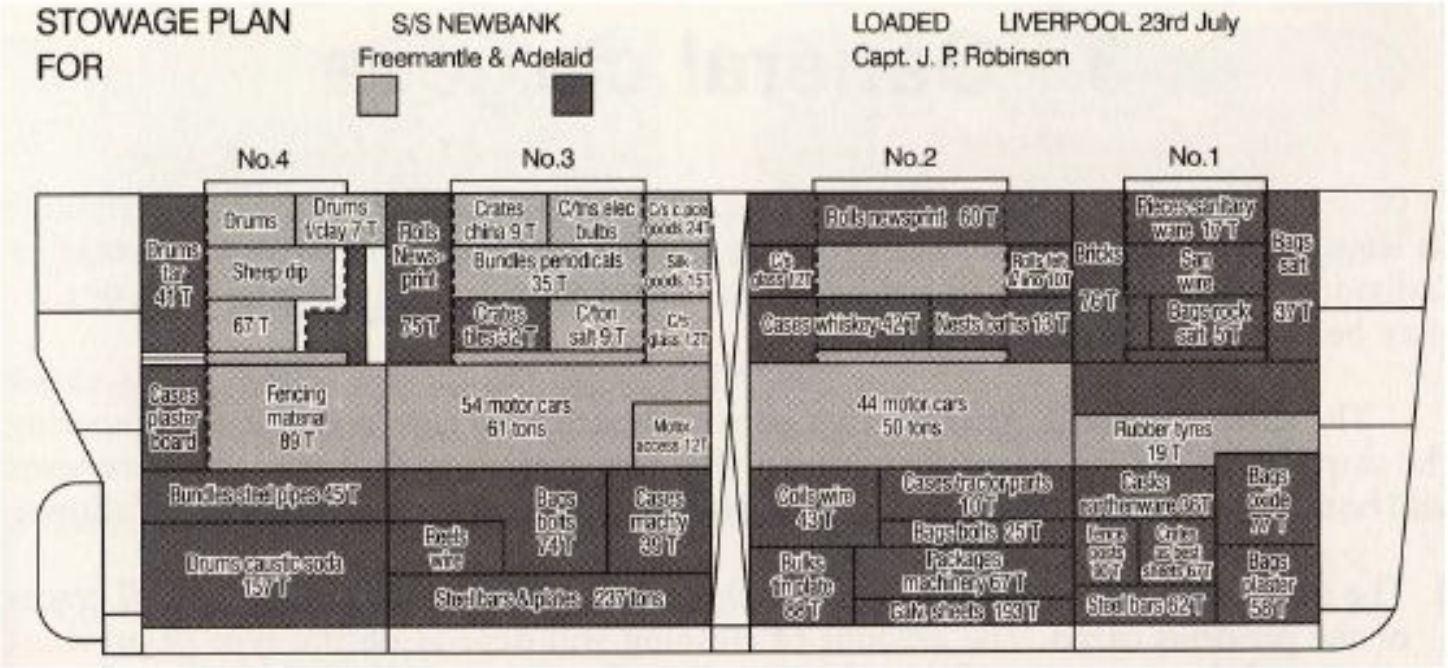
- improper handling during loading and discharging
- rubbing and chafing with ship structures or other cargo
- temperature fluctuations during the voyage
- contamination with other cargo
- dust and stain
- moisture, rain, fresh or sea water
- rats, mice and other vermin
- crushing under the weight of other cargo
- reaction with other cargo
- heat
- inadequate securing against shifting
- theft

General Cargo – Planning for stowage

Cargo stowage plans

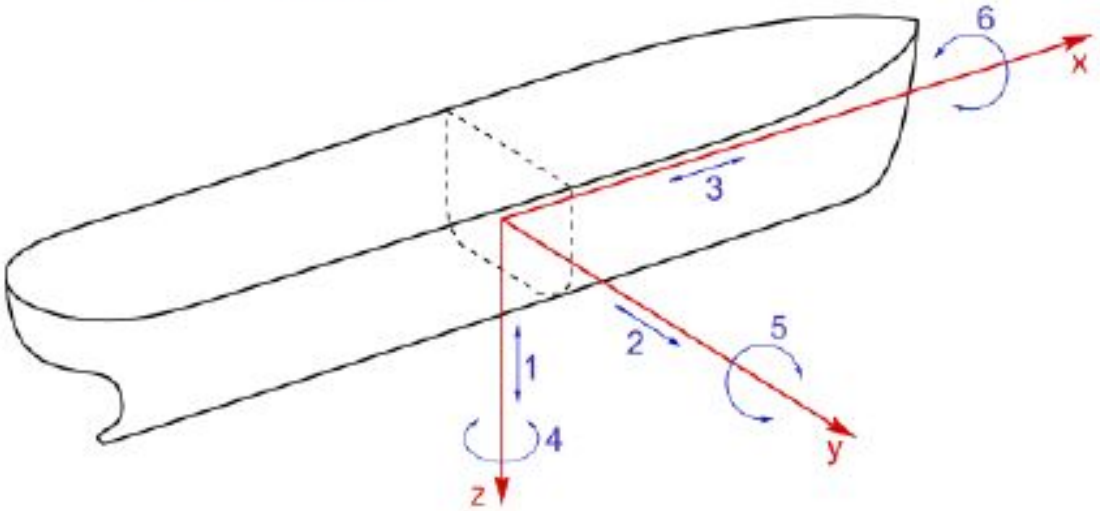
Additional considerations:

- Port sequence
- Maximize number of hooks



General Cargo – Securing

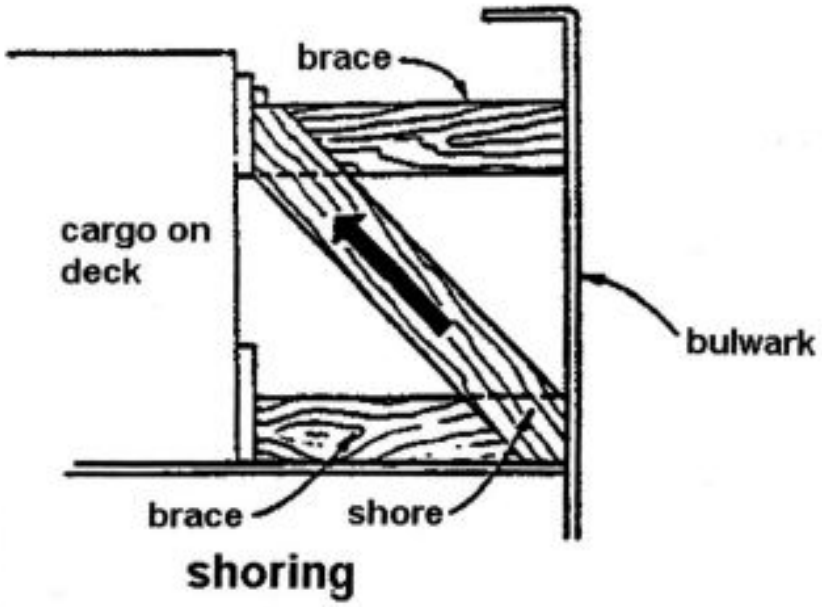
Ship's motions



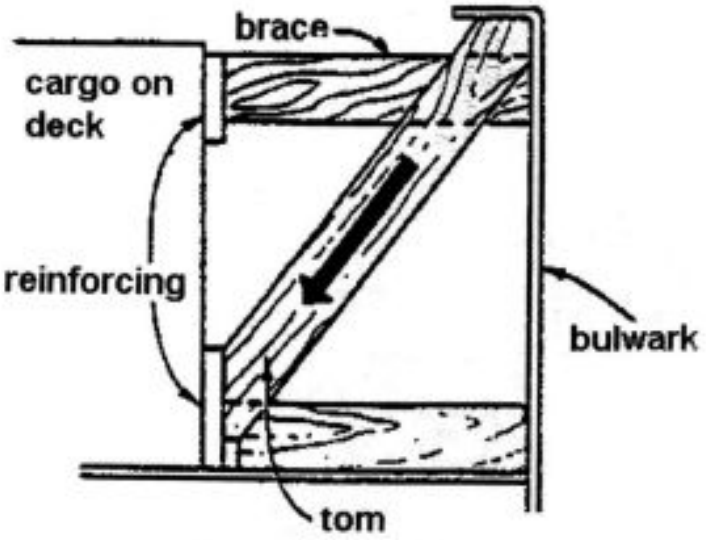
1 - Heave
2 - Sway
3 - Surge
4 - Yaw
5 - Pitch
6 - Roll

General Cargo – Securing

Use of timber to secure cargo



shoring

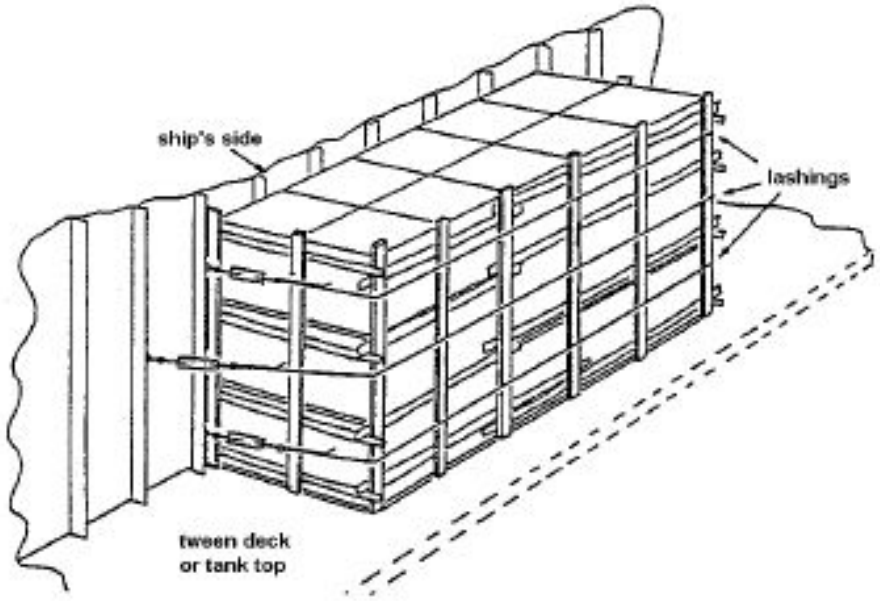


tomming

General Cargo – Securing

Other methods:

- Eliminating voids
- Skid prevention
- Lashing



Documents:

- Ship's Cargo Securing Manual
- Marine Orders (Aus)
- IMO Code of Safe Practice for Cargo Stowage and Securing

General Cargo – Securing

Source: UK P&I Club

General Cargo – Deck Cargo

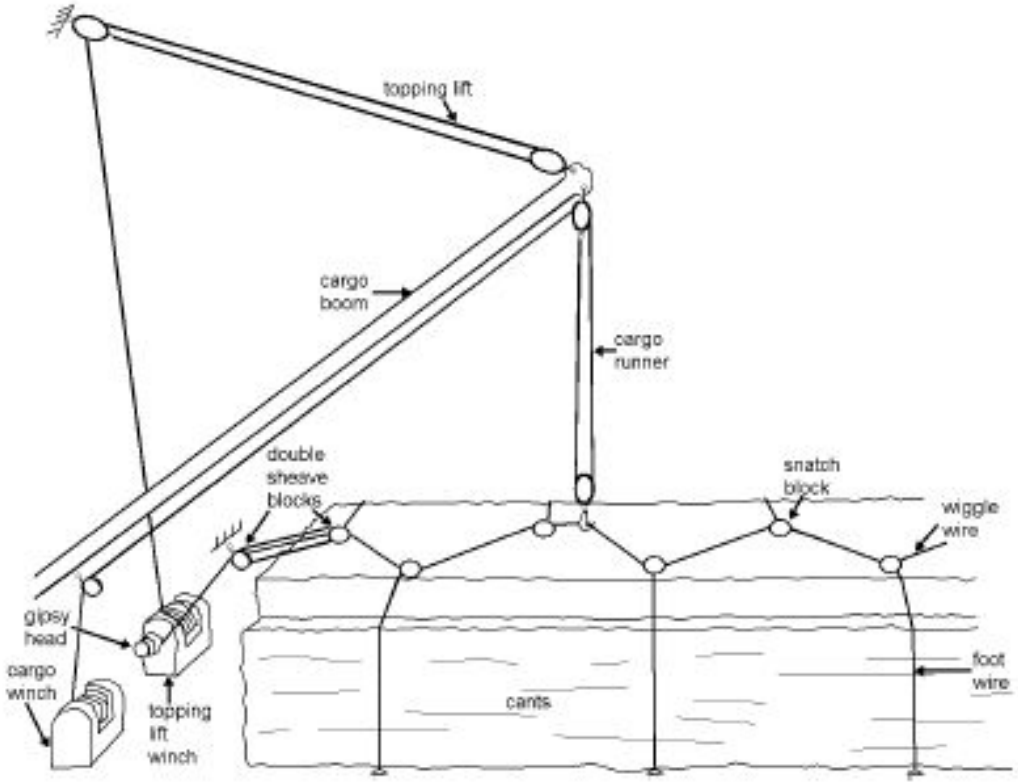
Check:

- Stability
- Access to safety equipment
- Access to working areas
- Adequate securing

Source: UK P&I Club

General Cargo – Deck Cargo

Securing Timber deck cargoes



General Cargo – Heavy Cargoes

Check:

- SWL of cargo gear
- Load limit of deck
- Stability of vessel
- Adequate securing

Car Carriers

Bulk Carriers

Readings 3.1 and 3.3

Topics:

- Tramp trades
- Bulk cargoes
- Bulk carriers
- Bulk cargo hazards
- Loading/unloading
- Publications

Main commodity groups

Energy Trade	• Nearly 50% • Crude oil, products, gas, coal
Agricultural trade	• 13% • Cereals, refrigerated food, fats, fertilizers
Metal industry trade	• 21% • Ores, steel products, scrap
Forest product trades	• 4% • Timber, paper, pulp
Other industrial materials	• 9% • Cement, salt, alumina, chemicals
Other manufactures	• 3% (probably 50% by value) • Textiles, machinery, vehicles, consumer goods

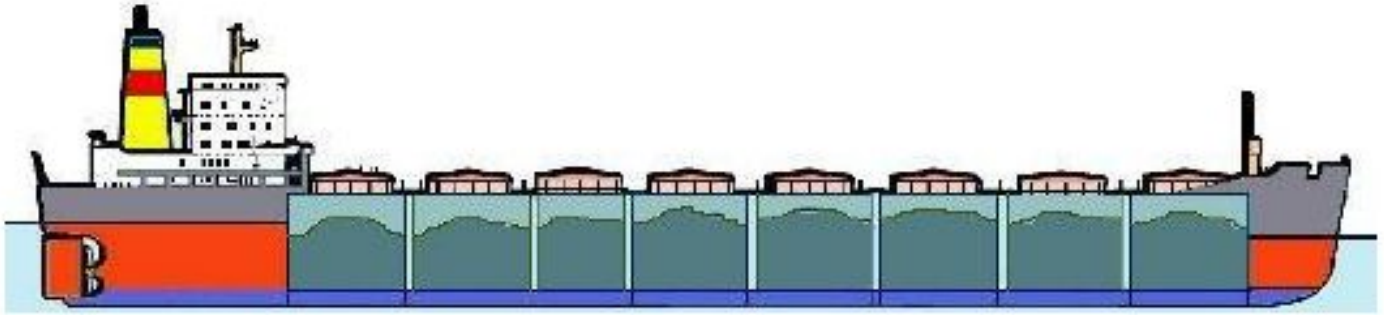
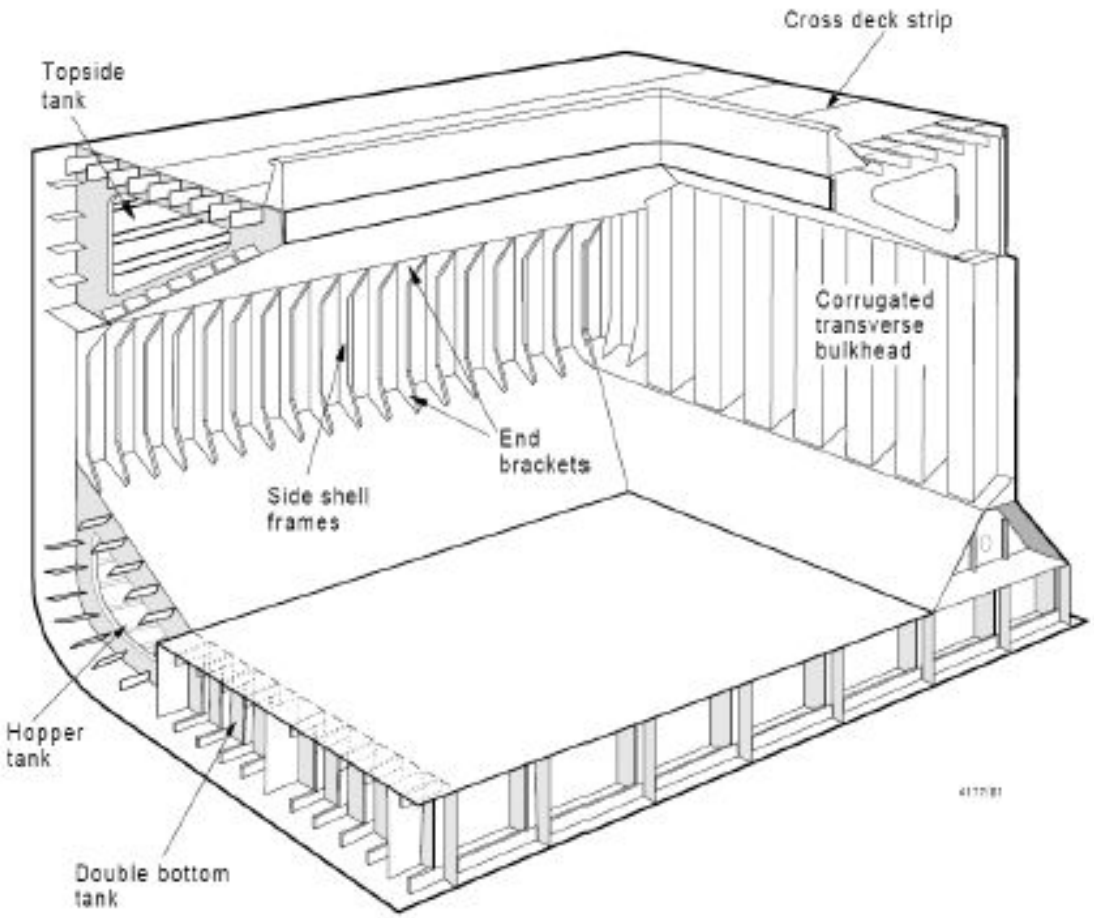
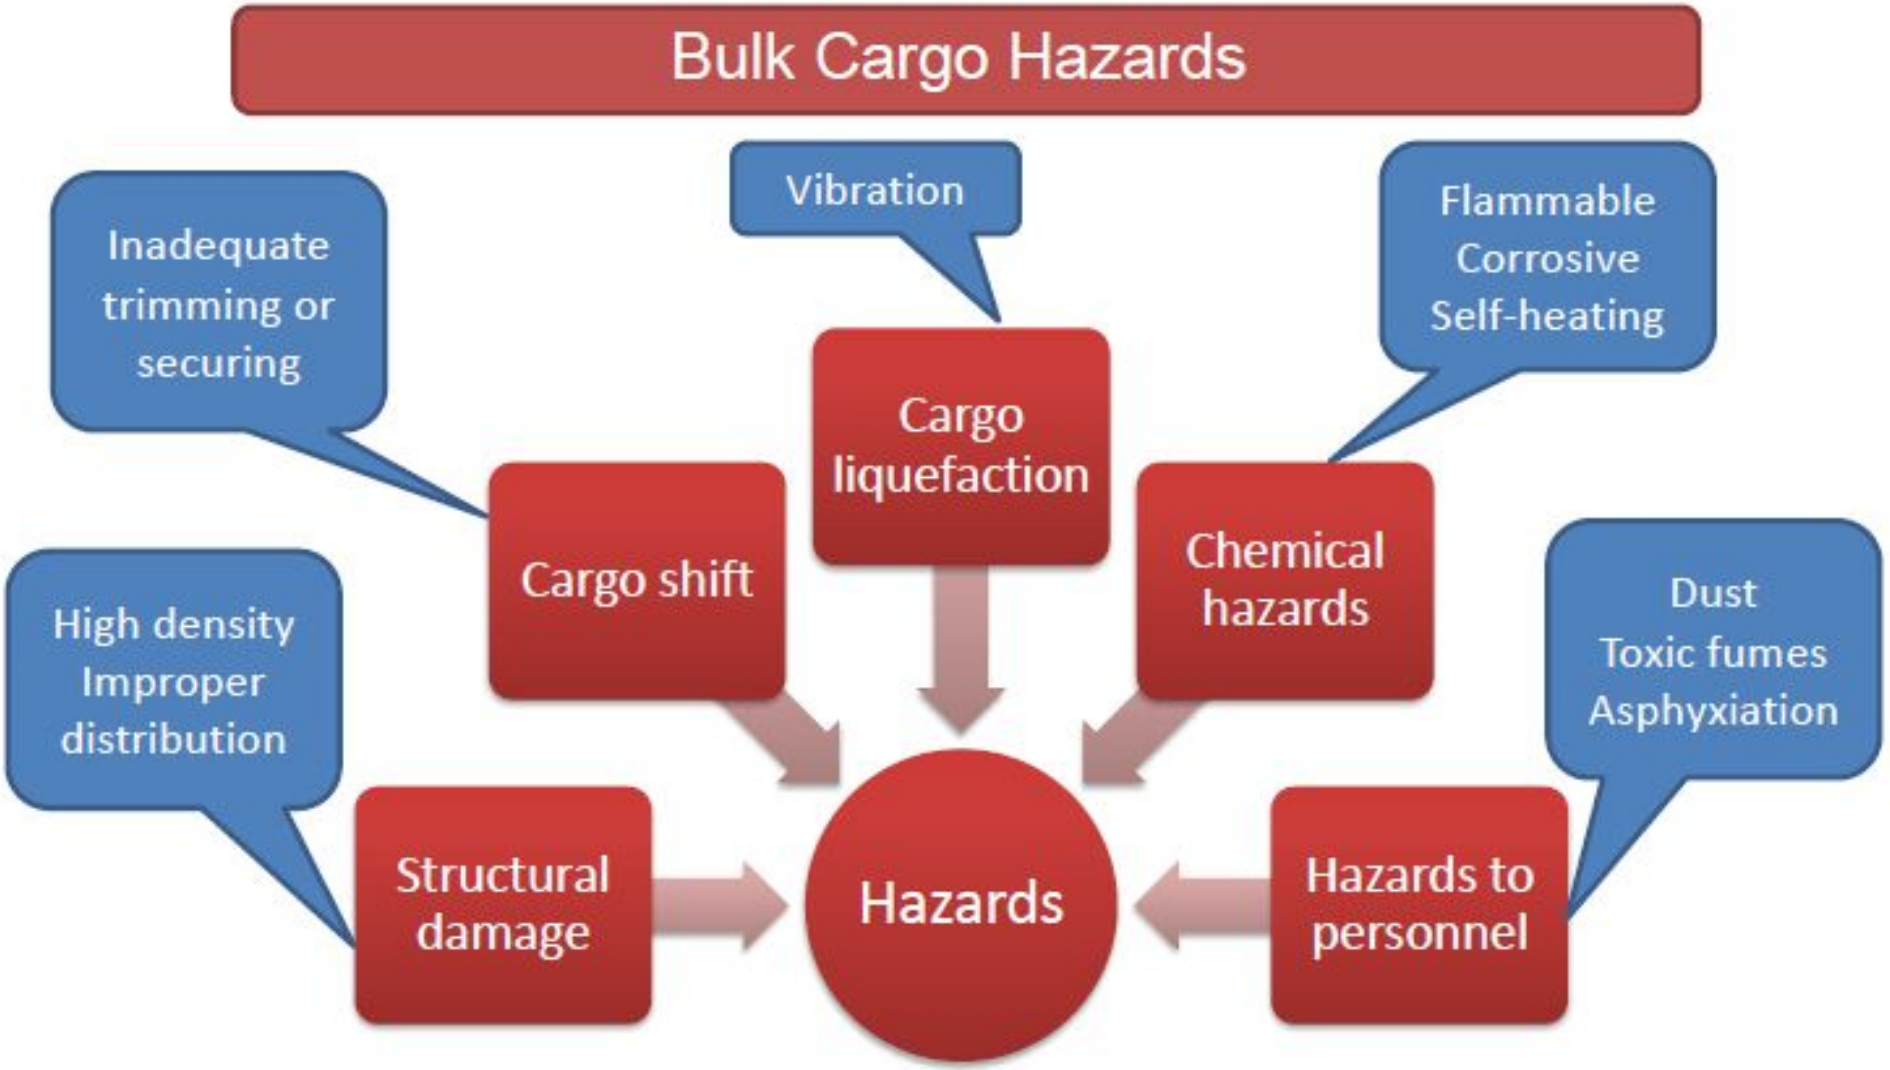
Bulk Carriers



Bulk Carriers – typical cargo hold



Source: UK P&I Club

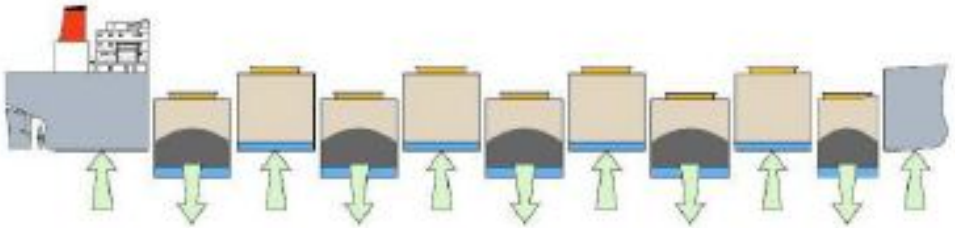


Ships' ballast water may transport harmful organisms

Structural damage

Cargo Distribution:

Shearing and Bending



Shore facilities – Bulk cargoes and containers

Topics:

- Bulk handling facilities
- Bulk handling considerations
- Terminal layout
- Container handling systems
- Container handling equipment
- Container equipment selection
- Automation

Bulk Liquids (Petroleum)

Readings: 5.1 – 5.7, 6.2

Topics:

Tanker construction

Cargo handling equipment

Pumps and piping

Inert gas system

Crude oil washing system

Hazards

Marine pollution

Product Tankers

Source: www.solentwaters.com.uk

Crude Oil Tankers

Sources of ignition

- DIRECT HEAT
- MECHANICAL SPARKS
- ELECTRICAL EQUIPMENT
- STATIC DISCHARGES

Crude Oil Tankers

Things that must be right:

- Ship/shore interaction
- Cargo monitoring
- Ship monitoring

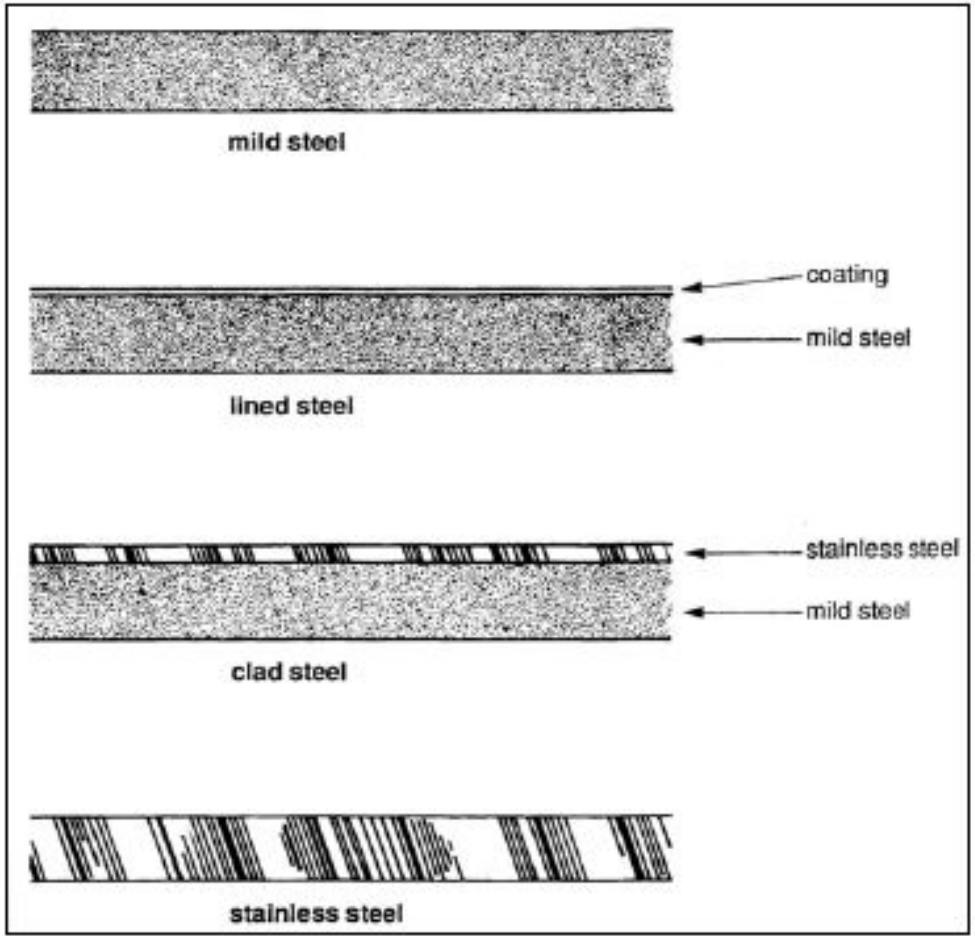
Chemical tankers

Cargo containment:

Independent tank	not part of the hull
Integral tank	part of the hull
Gravity tank	may be independent or integral
Pressure tank	independent tank for high pressure

Chemical tankers

Cargo Tank materials:



Chemical tankers

Heating coils:

Chemical tankers

Tank environment:

- Inert gas used is nitrogen
- Toxic vapors returned ashore via vapor return line
- Thorough gas freeing required prior to entry
- Tanks cleaning is very important

Chemical tankers

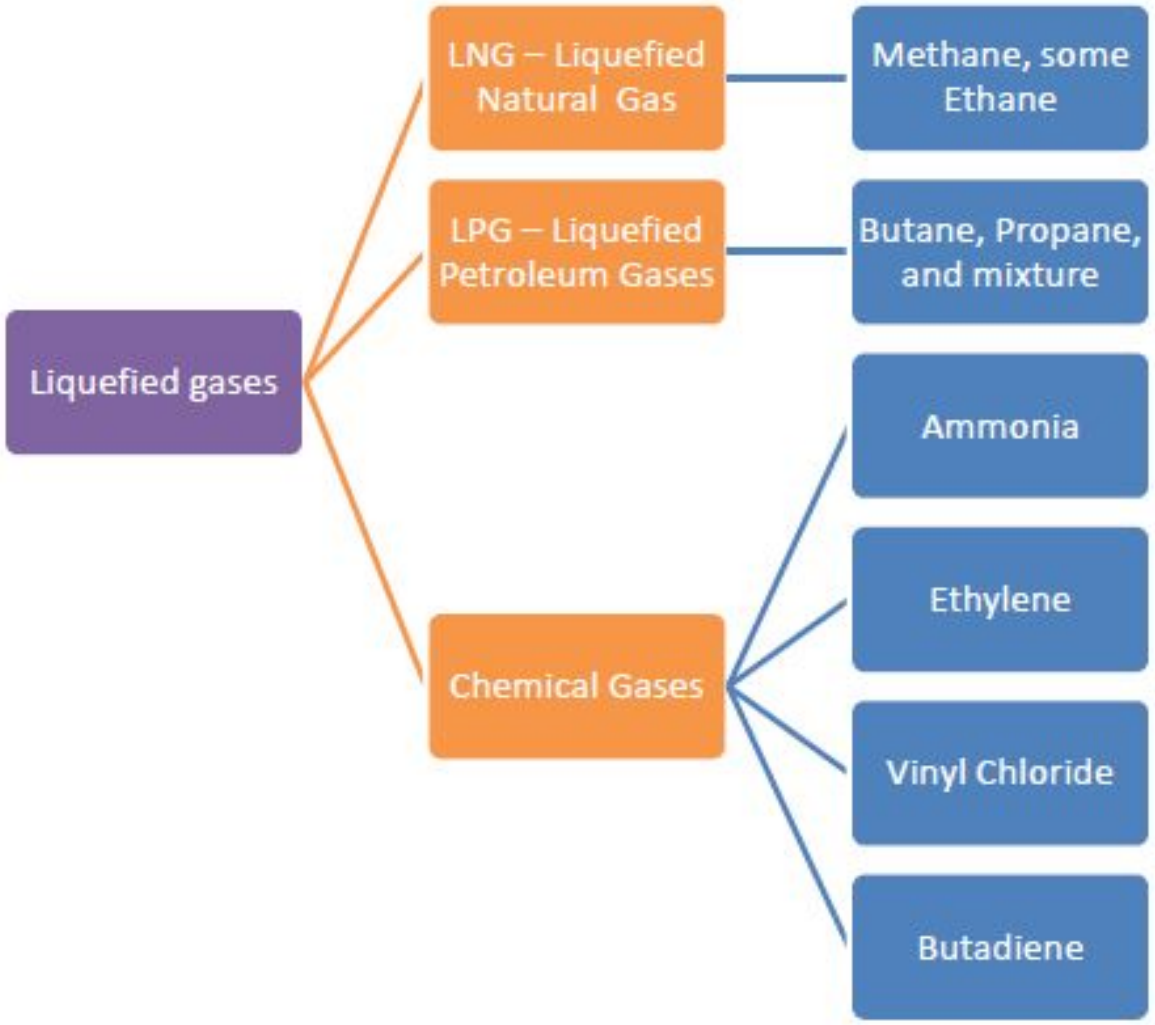
http://www.ships-info.info/merchant-ships.htm

Read the following article on IMO website:
CARRIAGE OF CHEMICALS BY SHIP

http://www.imo.org/home.asp?flash=false

Gas tankers

Gas tankers



Liquefied gases
LNG – Liquefied Natural Gas
Methane, some Ethane
LPG – Liquefied Petroleum Gases
Butane, Propane, and mixture
Chemical Gases
Ammonia
Ethylene
Vinyl Chloride
Butadiene

Gas Uses

Methane	• Burned for power generation • Piped into homes for heating and cooking
Propane	• Household heating • 'Autogas' used for vehicles
Butane	• Bottled as fuel for cooking and camping • Petrol component, aerosol propellant
Ethylene	• Primarily an intermediate in the manufacture of plastics (polythene)
Propylene	• Mainly used to make polypropylene
Butadiene	• Used to produce synthetic rubber • Small amounts used to make nylon

Gas Uses

Vinyl Chloride	• Used to make PVC
Ammonia	• Used to make nitric acid for fertilizers and explosives • Refrigerant gas for large plants
Chlorine	• Water purification, disinfectant • Used in paper production, dyestuffs, paints, medicines, textiles etc

Gas tankers

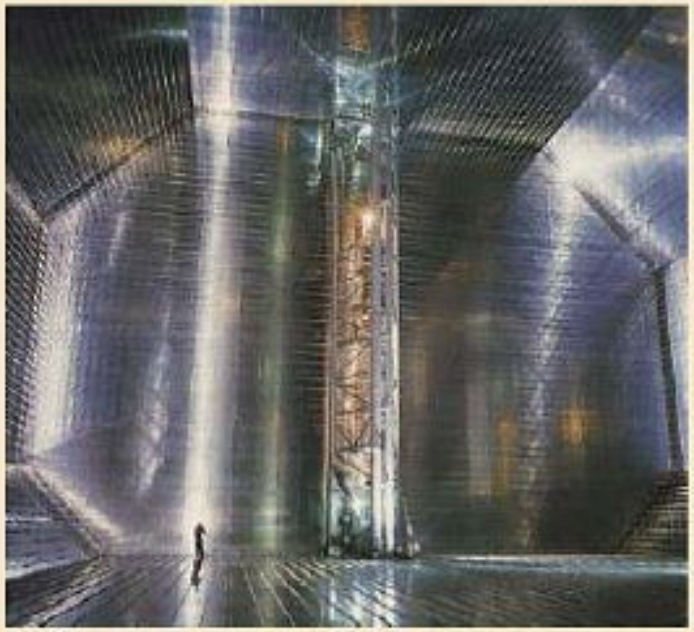


Image source: UK P&I Club

Types of Gas tankers

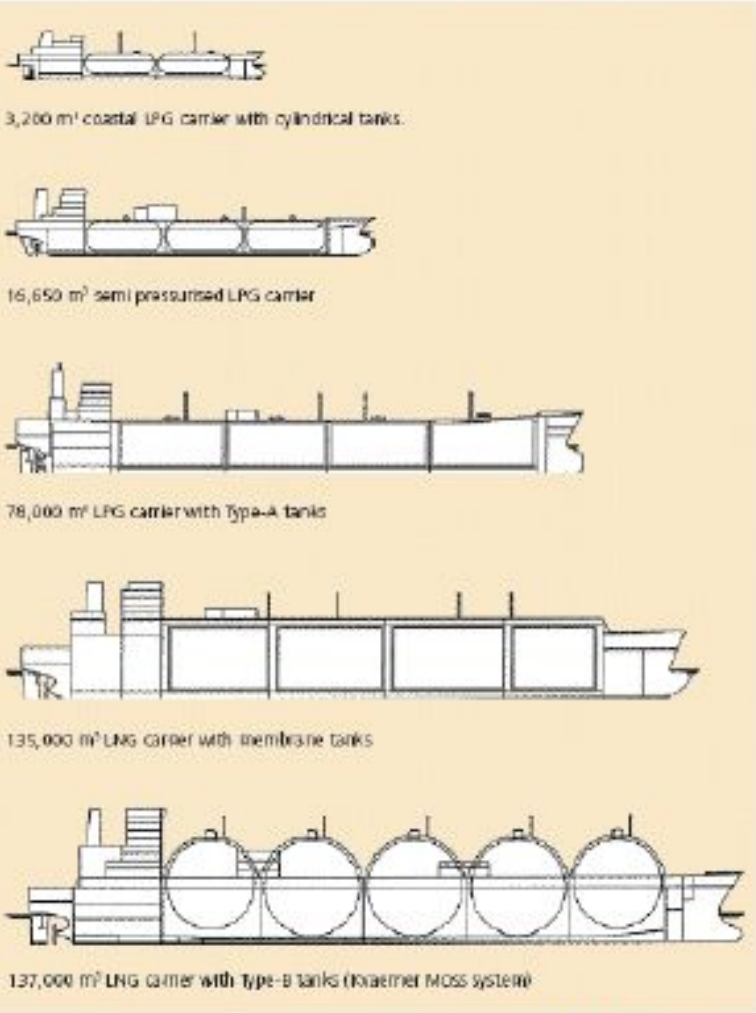

Image source: UK P&I Club

Fully pressurized ships:

- Type 'C' tanks (17.5kg/cm2 pressure)
- High pressure requires thicker tank wall
- Increased weight
- Tank shape limits optimum use of ship volume
- Small ships carrying LPG and ammonia

Semi-pressurized ships:

- Type 'C' tanks (5-8 kg/cm2 pressure)
- Require refrigeration plant and insulation
- Temperature of -48 degrees C
- Reduced tank thickness
- Provides cargo handling flexibility
- Optimum for LPG, vinyl chloride, polypropylene and butdiene

Types of Gas tankers

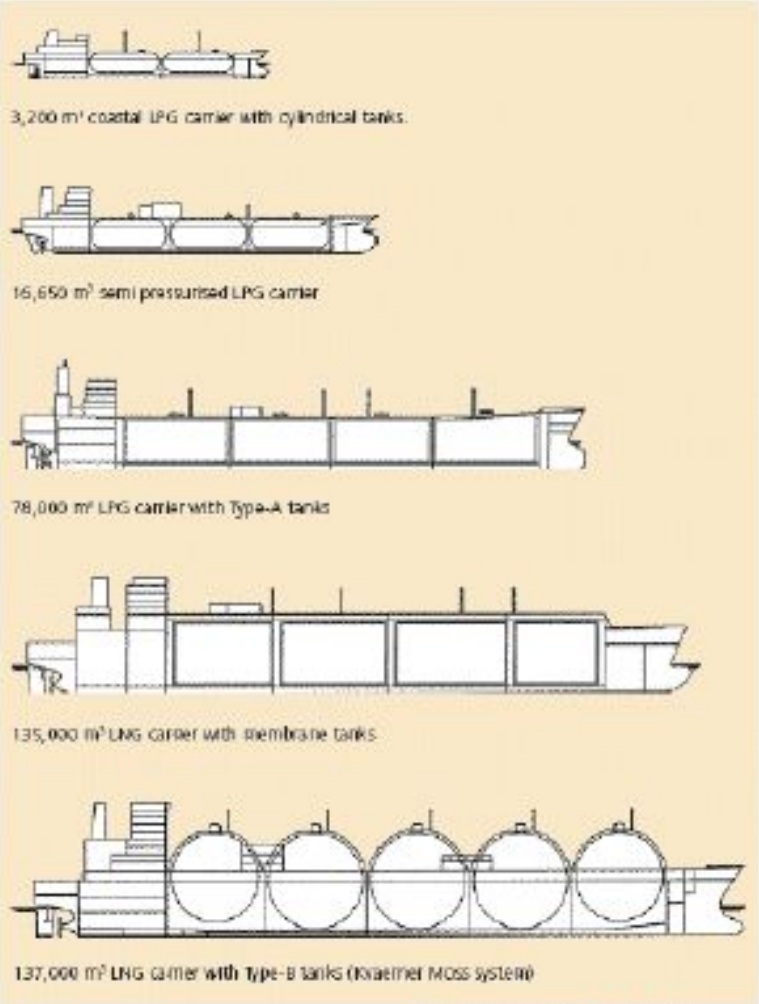

Image source: UK P&I Club

Fully refrigerated ships:

- Mostly type 'A' tanks (0.28 kg/cm2)
- Good space utilization
- Designed to transport large quantities of LPG and ammonia
- Working temperature is minimum -50 degrees C.

Ethylene ships:

- Predominantly type 'C' tanks
- Ethylene carried at -104 degrees C
- Thermal insulation and re-liquefaction plant installed
- Can carry LPG

Types of Gas tankers

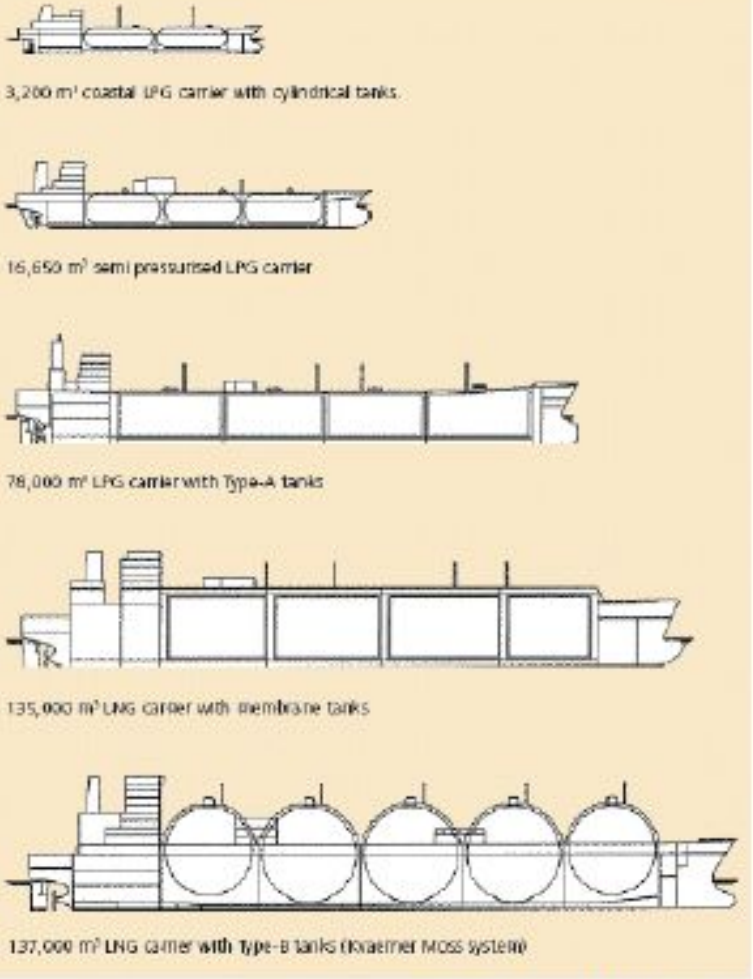

Image source: UK P&I Club

LNG ships:

- Membrane system or type 'B' tanks
- Fully insulated
- LNG carried at -162 degrees C.
- Not economic to liquefy methane on-board hence boil-off vapors are used as fuel for ship
