Пчела - очень полезное, трудолюбивое насекомое. Она опыляет цветы, производит очень ценные продукты - мёд, прополис, маточное молочко. Люди лечатся ими от разных хворей.

Пчелу можно нарисовать на основе круга и овала. Её крылышки напоминают вытянутые треугольники.

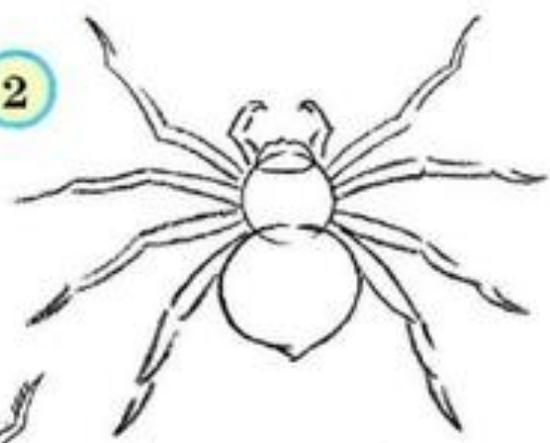

Обитают стрекозы возле водоёмов: болот, озёр, рек. У этого насекомого длинное тело, большая голова с огромными глазами и две пары длинных прозрачных крыльев.
