**How much of the salt
we eat is hidden in
the foods we buy?**

10%

20%

More than 50%

World Health
Organization

REGIONAL OFFICE FOR **Europe**

Answer

More
than **50%**

That's right, more than 50% of the salt we eat is already hidden in the foods that we buy. That's why we urge the food industry to take action.

REGIONAL OFFICE FOR Europe

Only food containing
a lot of hidden salt
tastes salty.

True

False

World Health
Organization

REGIONAL OFFICE FOR Europe

Answer

False

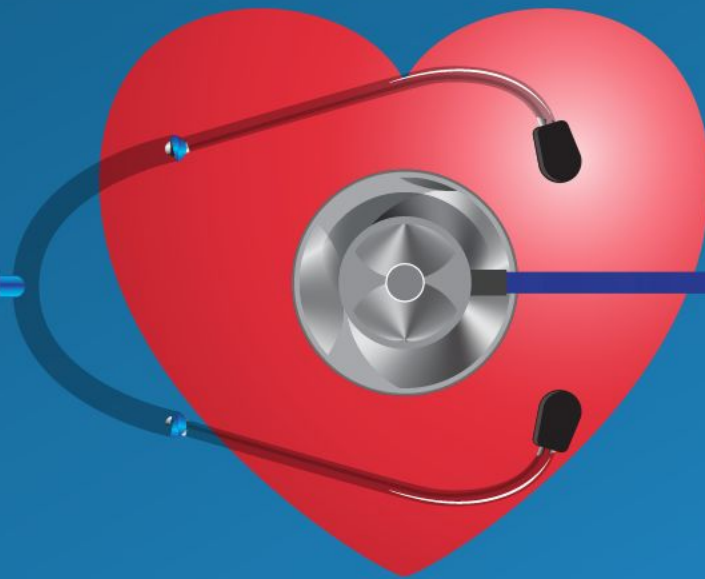

Many foods like bread,
cereals, bakery products,
processed meats &
cheese may contain high
levels of salt.

REGIONAL OFFICE FOR **Europe**

**Why is it important to
reduce salt intake?**

Reduces risk of developing
high blood pressure

Saves lives

Food will taste better

All of the above

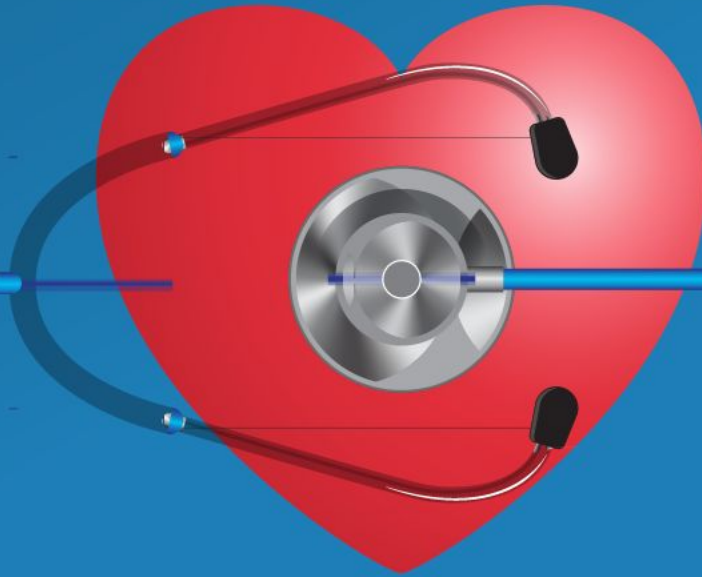

World Health
Organization

REGIONAL OFFICE FOR Europe

Answer

All three

Liking salt is a learned taste – so when you reduce the amount of salt you eat, you can start tasting food the way it should be enjoyed. And it will benefit your health by reducing risk of developing raised blood pressure, and ultimately save lives.
