

***TEMPLATE  
BIOSYNTHESIS***

# 3'-5'-phosphodiester bond formation

# DNA biosynthesis (homologous replication)

# Replicative fork

replicon

origin

# RNA polymerase active site

# RNA synthesis on DNA template

**polymerase;**  
**4 - growing RNA chain; 5 - area**  
**of termination.**  
**Arrow: direction of RNA polymerase**

# Processing of mRNA

# Splicing

# tRNA

# Processing of tRNA

***PROTEIN  
SYNTHESIS***

# Genetic code

# tRNA

**Aminoacyl-tRNA Synthetase**

Mammalian  
ribosome (80S)  
( $4.2 \times 10^6$  daltons)

60S subunit

40S subunit

nt = nucleotides

Amino acids corresponding to the codons are added to the growing protein chain.

# Chaperone

**Participation  
of chaperones  
in protein folding**

# Transport of protein across membrane

# Regulation of protein synthesis by induction

# Regulation of protein synthesis by repression

***GENETIC  
ENGINEERING***

# Cleavage of DNA with restriction enzymes

(a) Blunt ends (*RsaI*)

(b) Sticky 5' ends (*EcoRI*)

# Construction of recombinant DNA

# Introduction of DNA into the cell with plasmids

# Transfecti on

# Microinjection of DNA

# Electroporation

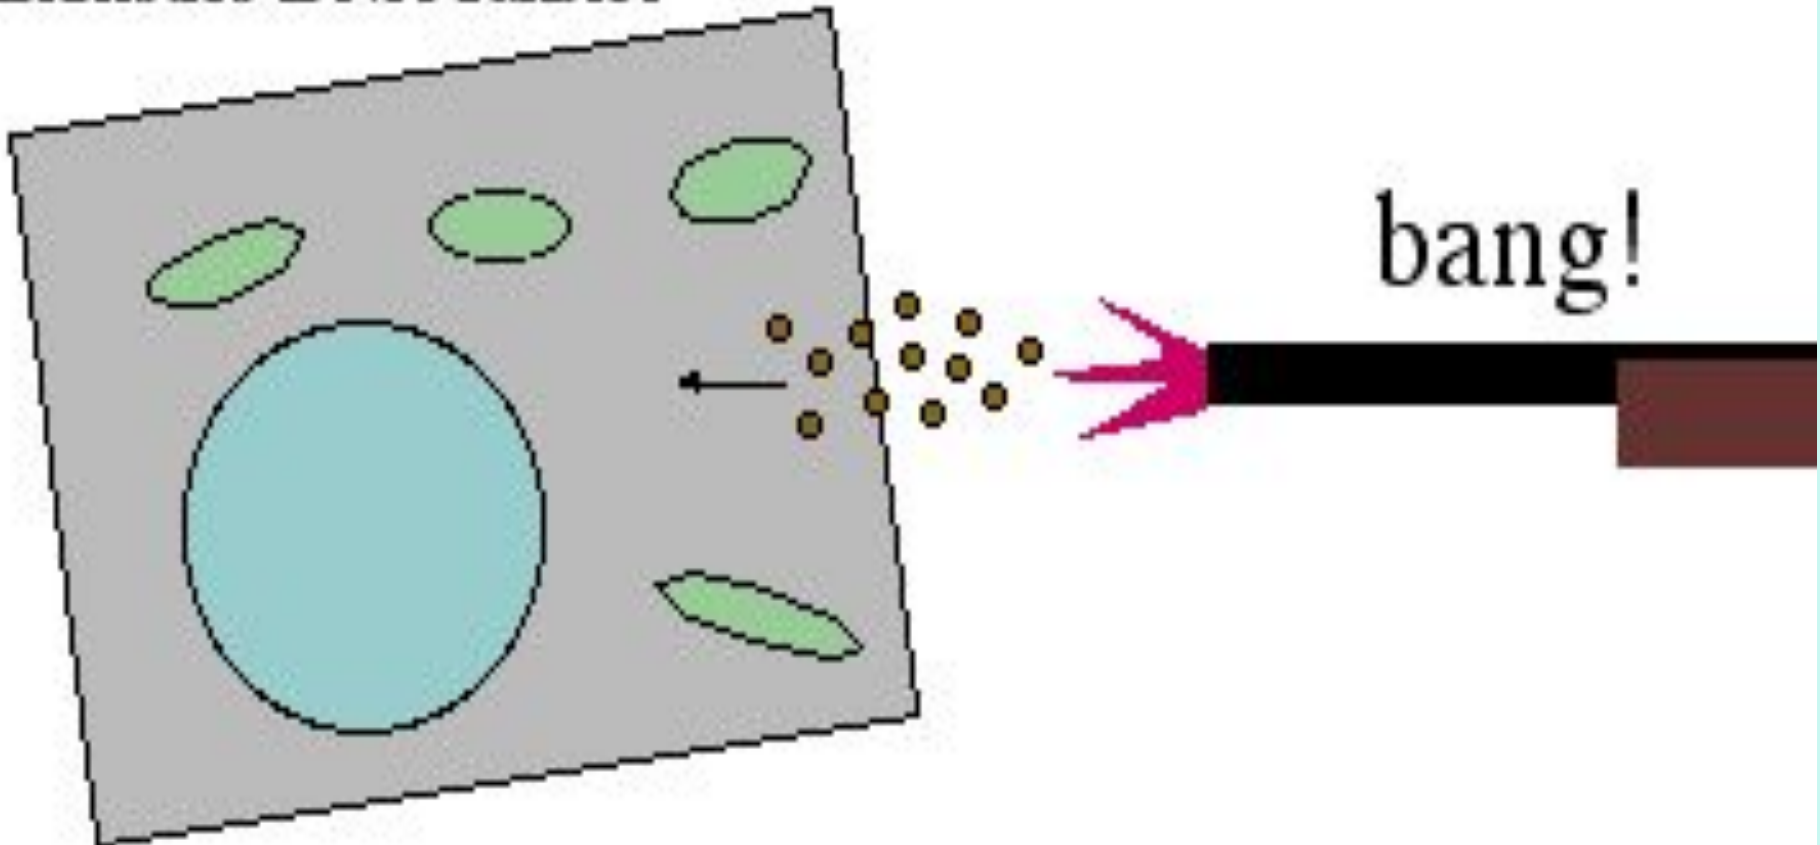

# Packing in liposomes

# The method of biological ballistics

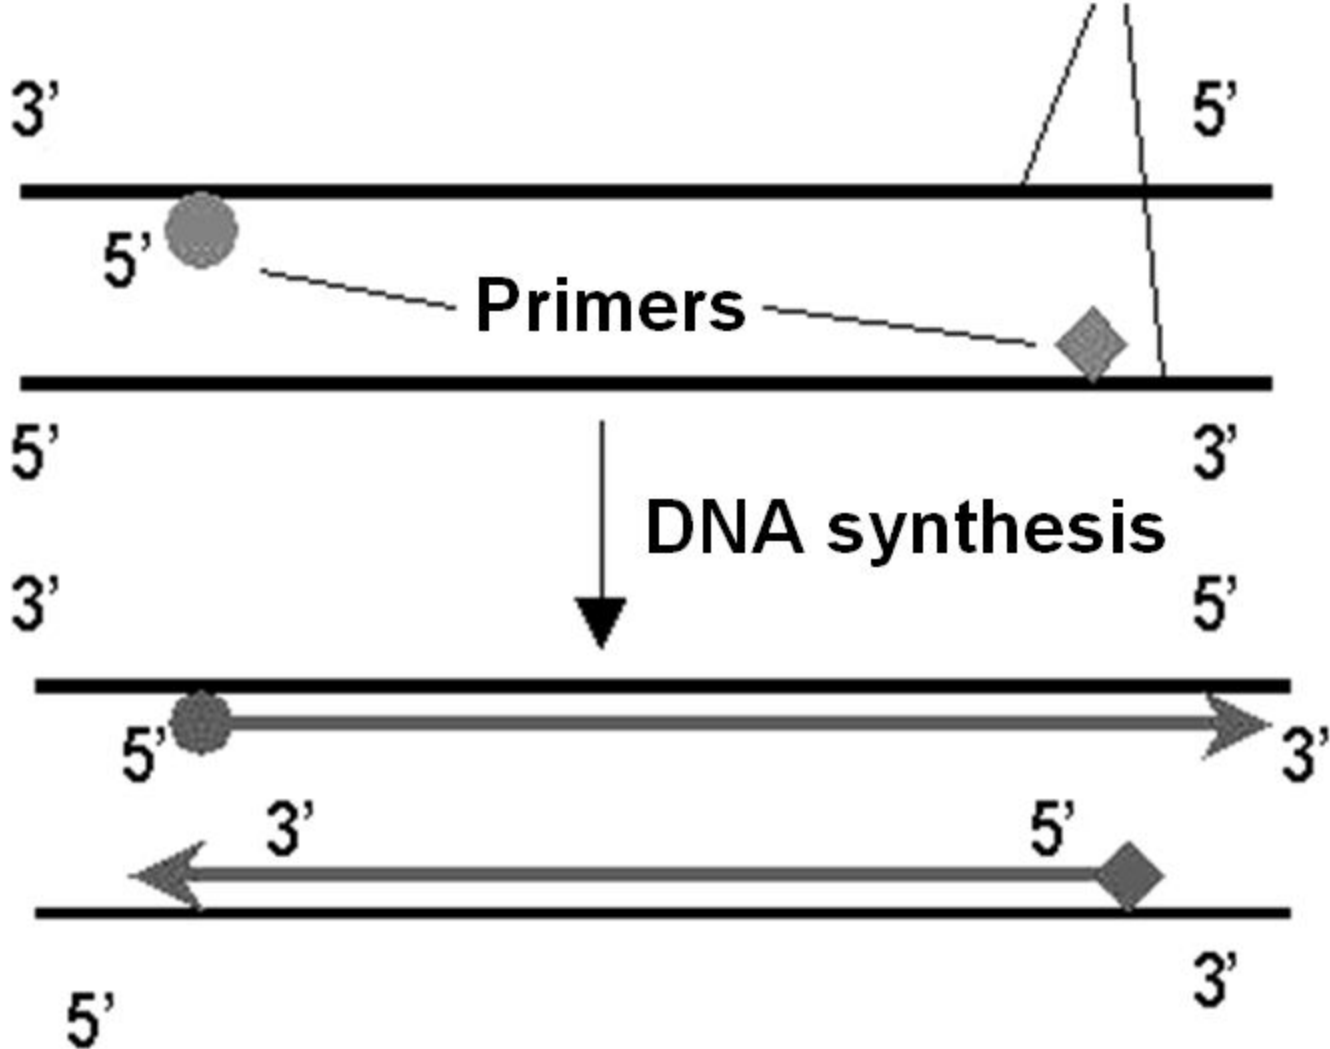

Biolistics DNA transfer

# Polymerase chain reaction (PCR)

Separated complementary DNA strands

# Polymerase chain reaction DNA amplification

# Gene Therapy

# Treatment with Gene Therapy
