Lock In Attribution

Create a permanent and unbreakable link between you and your creative work. That link – the record of ownership – can be forever verified and tracked.

Securely Share

Securely share your digital content with friends, family or fans. Transferring work is made as easy as sending an email. Literally.

Gain Visibility

Trace where and how your work spreads on the Internet. We show you all the sites your work has appeared on and its growth over time using [WhereOnTheNet](#).

Certificate Of Authenticity

Each registered piece comes with a COA, a built in unique cryptographic ID and the complete ownership history. The COA can be verified anytime and printed out, see an [example here](#).

Limited Digital Editions

Create unique, limited editions, a first for digital content. Digital editions make it possible to own and transfer digital artwork just like you can with physical art.

License Your Work

Transfer, consign or loan your digital creations without losing attribution. Our easy-to-use platform comes equipped with clear legal framework and supports custom contracts.

Проект Factom

<https://www.factom.com/>

The image shows a screenshot of the Factom website homepage. The background is a blurred image of a modern office interior with a long table and chairs. The website has a dark blue header with the Factom logo on the left and a navigation menu on the right. The main content area features the text 'FACTOM HARMONY' and a description of the platform as a practical blockchain solution. Below this are two buttons: 'OUR STORY' and 'EXPLORE FACTOM HARMONY'. At the bottom, there is a dark grey footer with a paragraph of text and a yellow button labeled 'FACTOM UNIVERSITY'.

Introducing a secure and transparent online voting solution for the modern age:

FOLLOW MY VOTE

Join Our List Of Supporters!

Why Online Voting

Follow My Vote's ambition is to build a secure online voting platform that will allow for greater election transparency.

Since the dawn of democracy, elections throughout the world have been plagued with accusations of illegitimacy. As democratic societies across the globe are beginning to adopt technology to improve the efficiency of the election process, many people are discovering that certain types of technology can be extremely vulnerable, which may have the potential to unfairly influence the outcome of elections.

Only those that are on the forefront of technological advancement realize today what the majority of people will become aware of tomorrow, which is that there was a technological solution that was recently introduced to mankind that has the ability to solve both of these critical issues: the lack of transparency in our elections and the lack of security of our election systems.

Using this advanced technology we will be able to gain transparency into our elections, without compromising voter privacy, and have a way to mathematically prove that the elections results are accurate. Also, at the voter's request, there would even be a way to allow a voter to cast their vote online in an election and follow their vote into the ballot box to ensure that their vote was safely and securely stored without being changed or altered in any way.

Typically, when cutting edge technology is introduced to the masses, there is an increased financial burden placed on early adopters whom are willing to pay the higher cost in order to take advantage of the additional benefits the new technology provides. Contrary to this trend, this particular technology could actually drastically reduce the costs of our elections and free up taxpayer money to be spent on other extremely important aspects of our society, such as improving the quality of our education systems or rebuilding our crumbling infrastructure.

Increasing voter turnout would also be a likely byproduct of bringing elections securely online. The reality is that, in the past, many companies have tried to host elections online but have failed only due to the technological approach they decided to take and not because it can't be done. If we can overcome the misconception that online voting cannot be done safely and securely, we could encourage a whole new wave of voters to conveniently cast their vote online from anywhere in the world.

Why? Why introduce a new voting system that could cut costs, increase voter turnout, make voting more convenient and accessible, ensure elections are honest, and reassure voters that their voice was heard by their government?

Because we can. Because we now have the technology to make all this possible. All we need from you is your support to make this a reality.

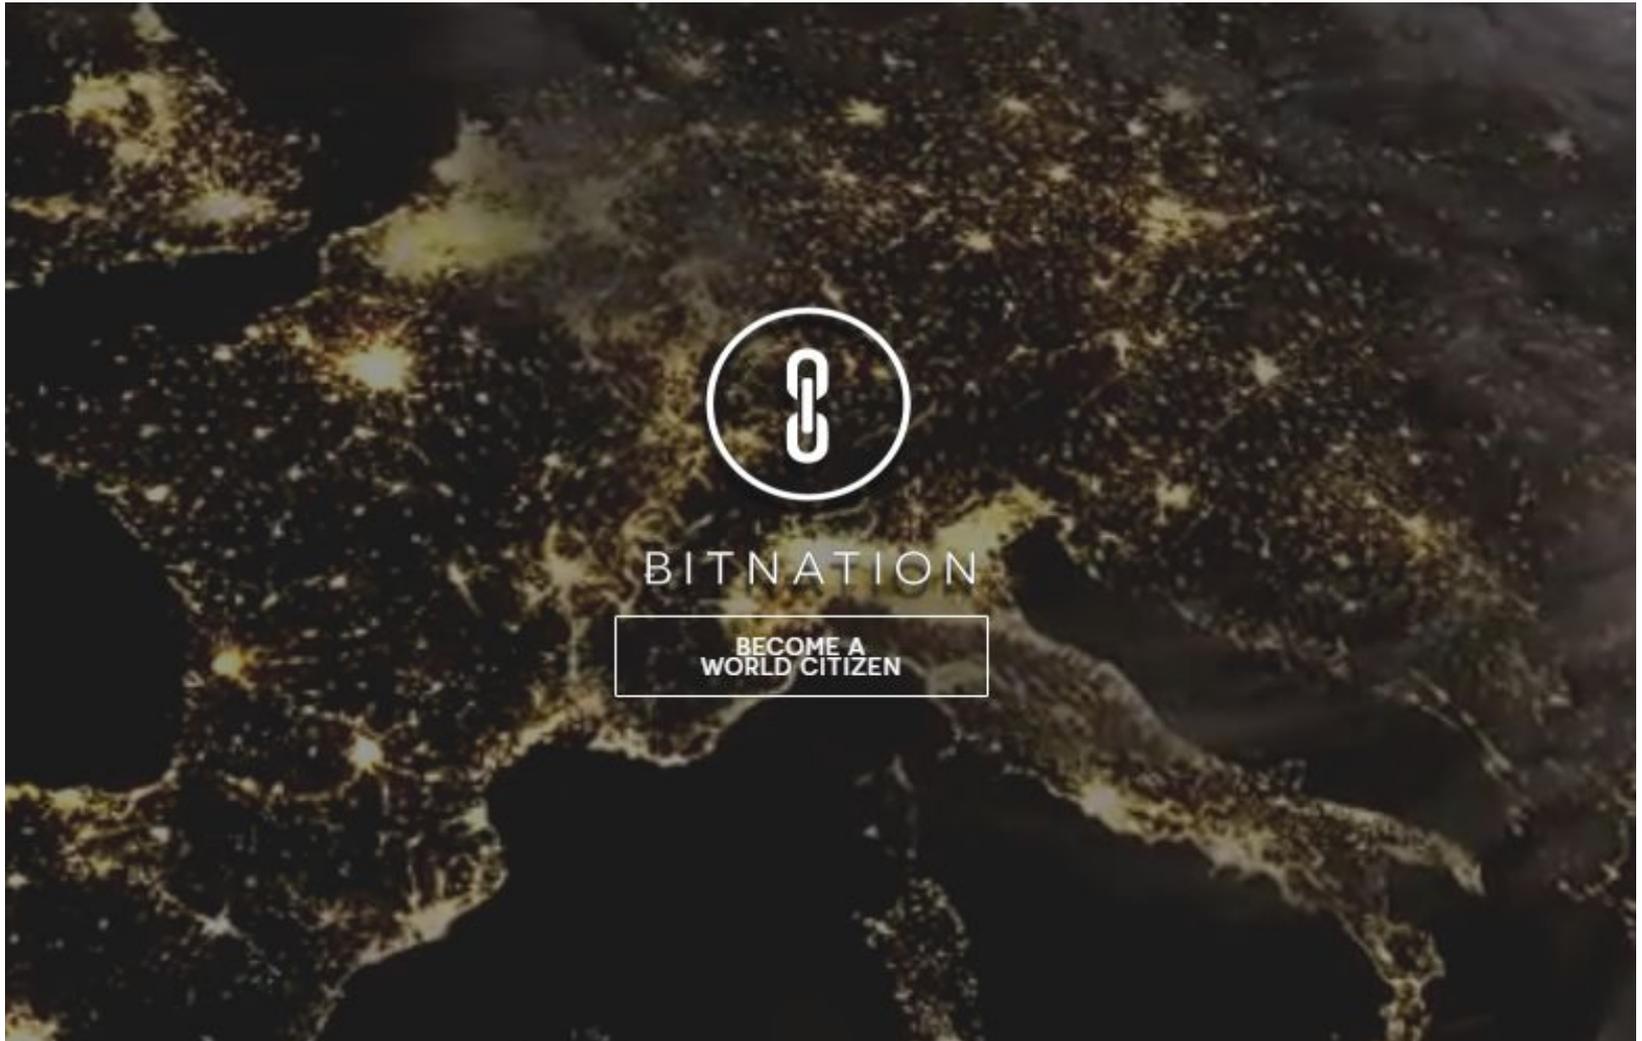

Will you join us?
