Consumer

The following can act as consumers in the economy:

1. individuals and households
2. firms (manufacturers)
2. state

Factors influencing consumer choice:

1. limited financial resources;
2. fashion;
3. usefulness of goods and services;
4. period of consumption (non-durable and durable goods)

Producer

1. individuals and households (individual production)
2. firms and companies
3. state (state and municipal unitary enterprises)

Producer

In a market economy, the manufacturer has freedom.

Labor productivity is the quantity of goods that can be produced by workers in a given period of time.

Relationship between consumer and producer

The exchange is a process of mutual changing of equal goods by both sides.

The following conditions should be met to implement the exchange process:

1. There should be as minimum two sides involved in the exchange process.
2. Each side should have something valuable for the counterpart.
