

Solar panel installer

The work was performed by
Alexander Igumnov
Ivan Korotsov

Features of the profession

The modern world is concerned about the problems of depletion of natural resources, in particular, sources of electric energy. Therefore, the issue of switching to alternative energy sources is acute. This is also facilitated by the rise in prices for traditional energy carriers. In the last decade, the eyes of scientists have turned to the Sun – an eternal and inexhaustible source of heat and light. The science of obtaining energy from the sun began to develop actively: solar panels were designed and created.

Solar energy is natural and environmentally friendly.

Advantages of solar power plants:

1. they are quickly and easily erected thanks to lightweight structures;
2. trouble-free operation of simple elements;
3. silent operation;
4. easy operation and maintenance;
5. there is no emission of harmful substances, as when using other energy sources.

Positive

- High pay (the average salary in Russia is 110,000 rubles)
- Constant demand
- High prestige of the profession

Minuses

- Frequent business trips or shift work method
- High level of responsibility

Important qualities

- responsibility
- discipline
- diligence
- commitment
