

Refrigerator

Refrigerator — a device that maintains a low temperature in a thermally insulated chamber. Is usually used for food storage or items requiring storage in a cool place. In developed countries household refrigerator can be found in almost every family.

An open white ARDO refrigerator is shown, filled with various fresh items. The top shelf contains three brown eggs. Below that, there are two green bottles of juice. The middle shelves are filled with fresh produce, including red tomatoes, green leafy vegetables, yellow bananas, and several oranges. The bottom shelves feature two clear plastic drawers containing yellow and red bell peppers. The refrigerator door is open to the right, revealing a large blue ice tray. The ARDO logo is visible on the top left of the refrigerator's exterior and on the interior door.

The history of creation.

Storage space for ingredients, fill with ice, several thousand years ago. For Nero the servants harvested on frozen ponds in the mountains of snow and ice. Southern Europe for a long time did not even know that snow and ice can be useful in the economy. The famous traveler and merchant Marco Polo after a long stay in China wrote a book in which he described all the advantages of ice and snow.

**By 1962 the refrigerators had:
in the USA — 98,3 % of the
families in Italy — 20 %, and in
the USSR — about 5.3 % of
families**
