AMAZONIAN DOLPHIN

Is the largest river dolphin. Reaches 2,5 meters at length and weights of 2 centners.

Galago or bushbaby

The charming attractive face and graceful movements, flexibility and ingratiating, brightly reflect its cat's line.

SUMATRANSKY RHINOCEROS

It is not artiodactyl animals of rhinoceroses' family. The given kind of rhinoceroses is smallest of all family.

TASMANIAN DEVIL

This animal has a dense constitution and severe customs, it is the reason of its name - a devil.

Lory

The muzzle of the lory can be compared to a mask of the clown. It, most likely, explains the name of an animal: Loeris in transfer means "clown".

False gavial

Certainly, one of representatives of group of crocodiles. During its life false gavial's muzzle becomes longer.

Sifaka

It is a rather new sort of primates,
it was first discovered only in 2004. Now there
are hardly more than 600 individuals;
silky sifakas are under the threat
of disappearance.

Sloth

It lives mainly in Central and the South America. The sloth spends almost all its life head over heels.

Grazing drakula

It is a grazing bat
(«*Sphaeronycteris toxophyllum*»
from lat.)

Star-nosed mole

Insectivorous mammal of mole's family. Its food is earthworms. It eats with the help of feelers on a snout.

THE NAKED NAVVY

Small digging rodent of navvy's family. This animal doesn't feel pain, acids and cold.
