

ECOLOGY AND STYLE.

**CLOTHES OF THE
FUTURE**

CLOTHES OF THE FUTURE:

- **Changes of colour depend on our mood.**
- **It is adapted to the environment.**
- **It supervises a level of temperature and an irradiation.**

- **Our clothes independently clear themselves from dirt with the help of special bacteria.**
- **Electronic T-shirts for blind in time will warm the owner from objects, which are coming nearer**
- **The special lay clothes adjoining body, will beep palpation of b**

**The large charge of energy
recourses/**

The energy hunger

**To produce clothes “for
centuries”**

Protection against pollution

Masks of protection from the polluted air.

Control panel for managing of temperature routine of the costume.

Sun's discs, collecting the energy and detaining the harm.

- In future, when the Natural resources would be controlled our world would be wide and distributed...

- ...so traditional clothes would be mixed up and on their basis new styles will appear.

- We always wear clothes, which can say about us much better than words. They tell about our place in the society, our salary, our business. Clothes show good points and tastes of the owner.
