

*What is it like to live  
in the world of colors?*

by Olga Chernoklinova 9 B  
and O.N. Knyazeva, my teacher of English

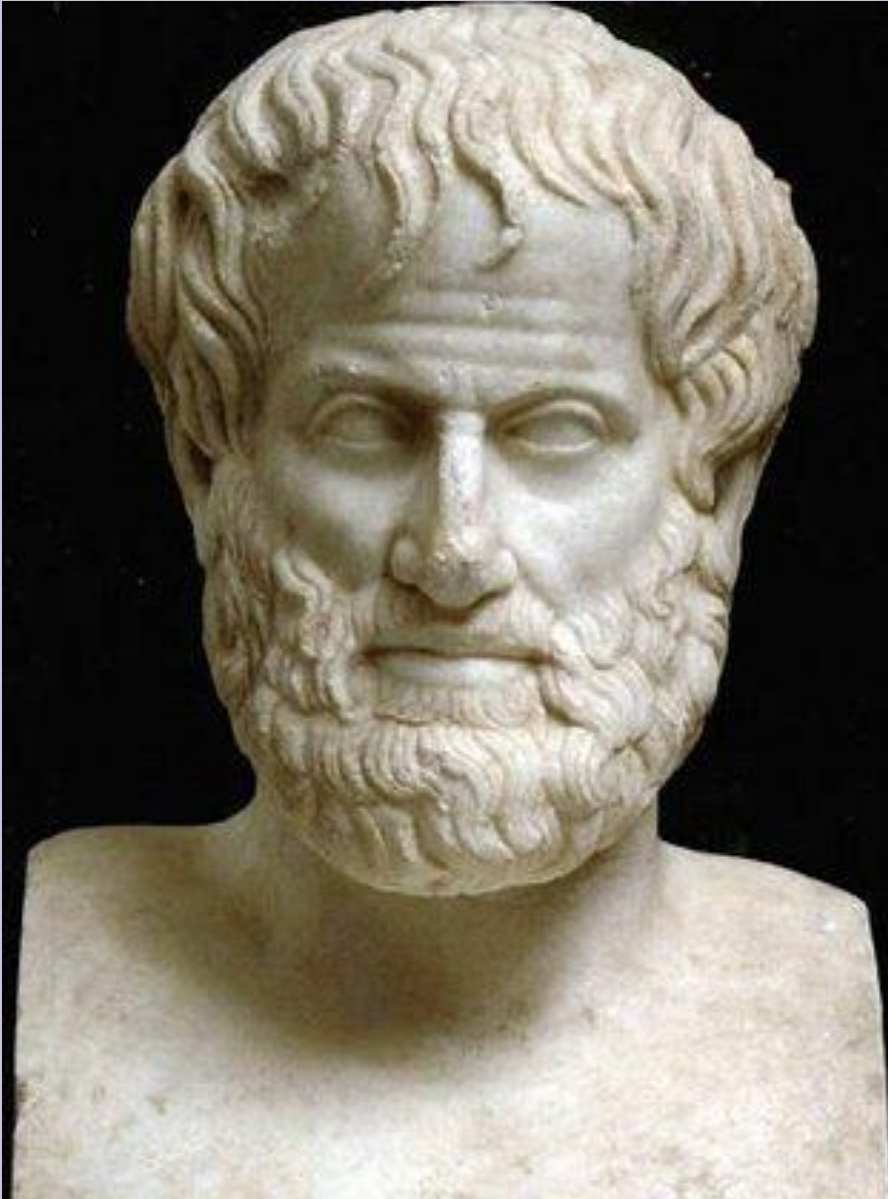

Colors  
accompany  
us  
everywhere.  
They are our  
invisible  
companions.

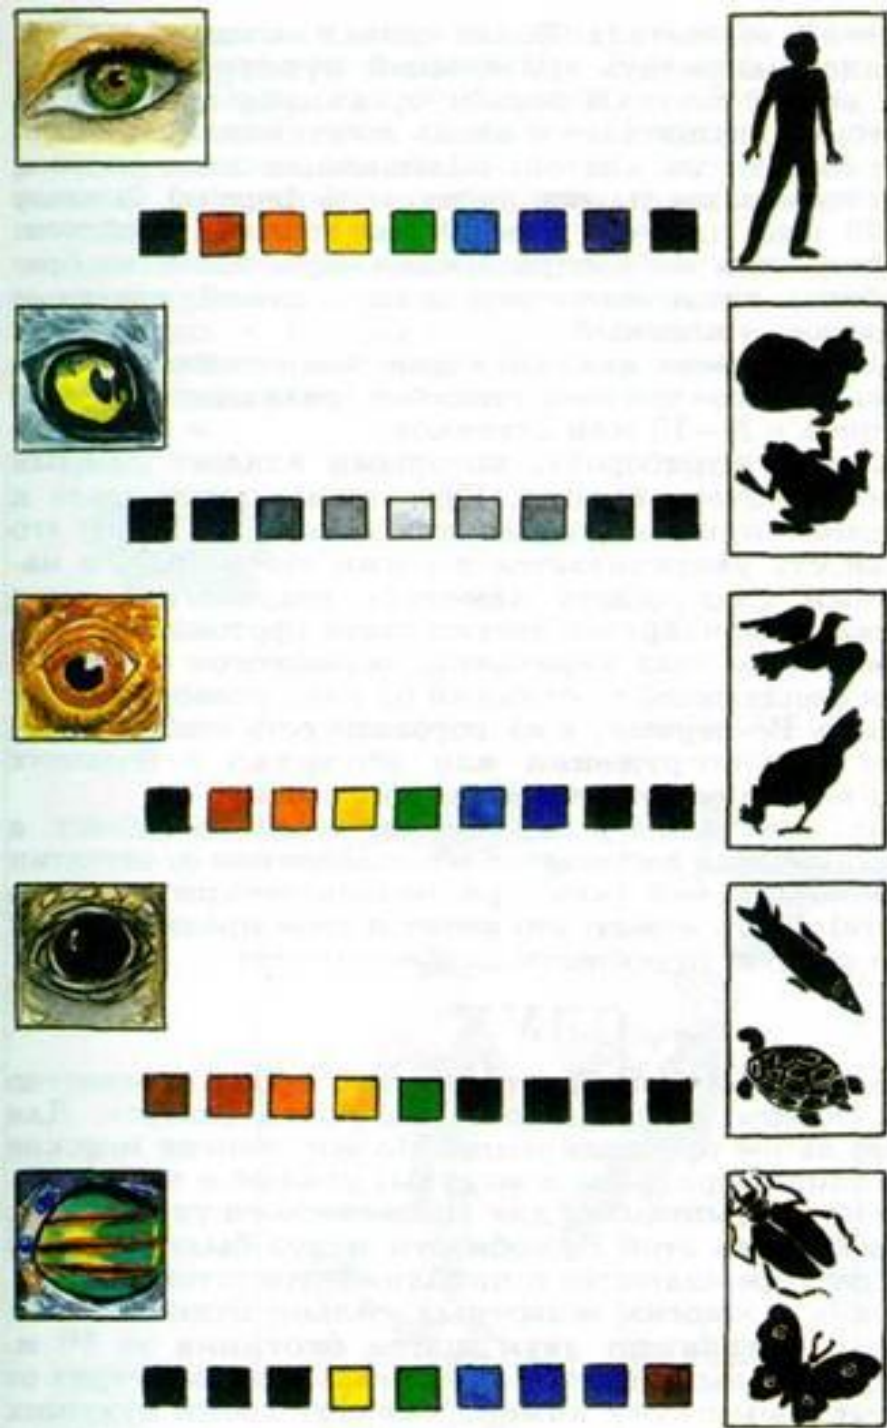

# History of color theory

The Greek philosopher Aristotle maintained that the two principal colors were white and black. All colors derived from one of the four elements: air, water, earth and fire.

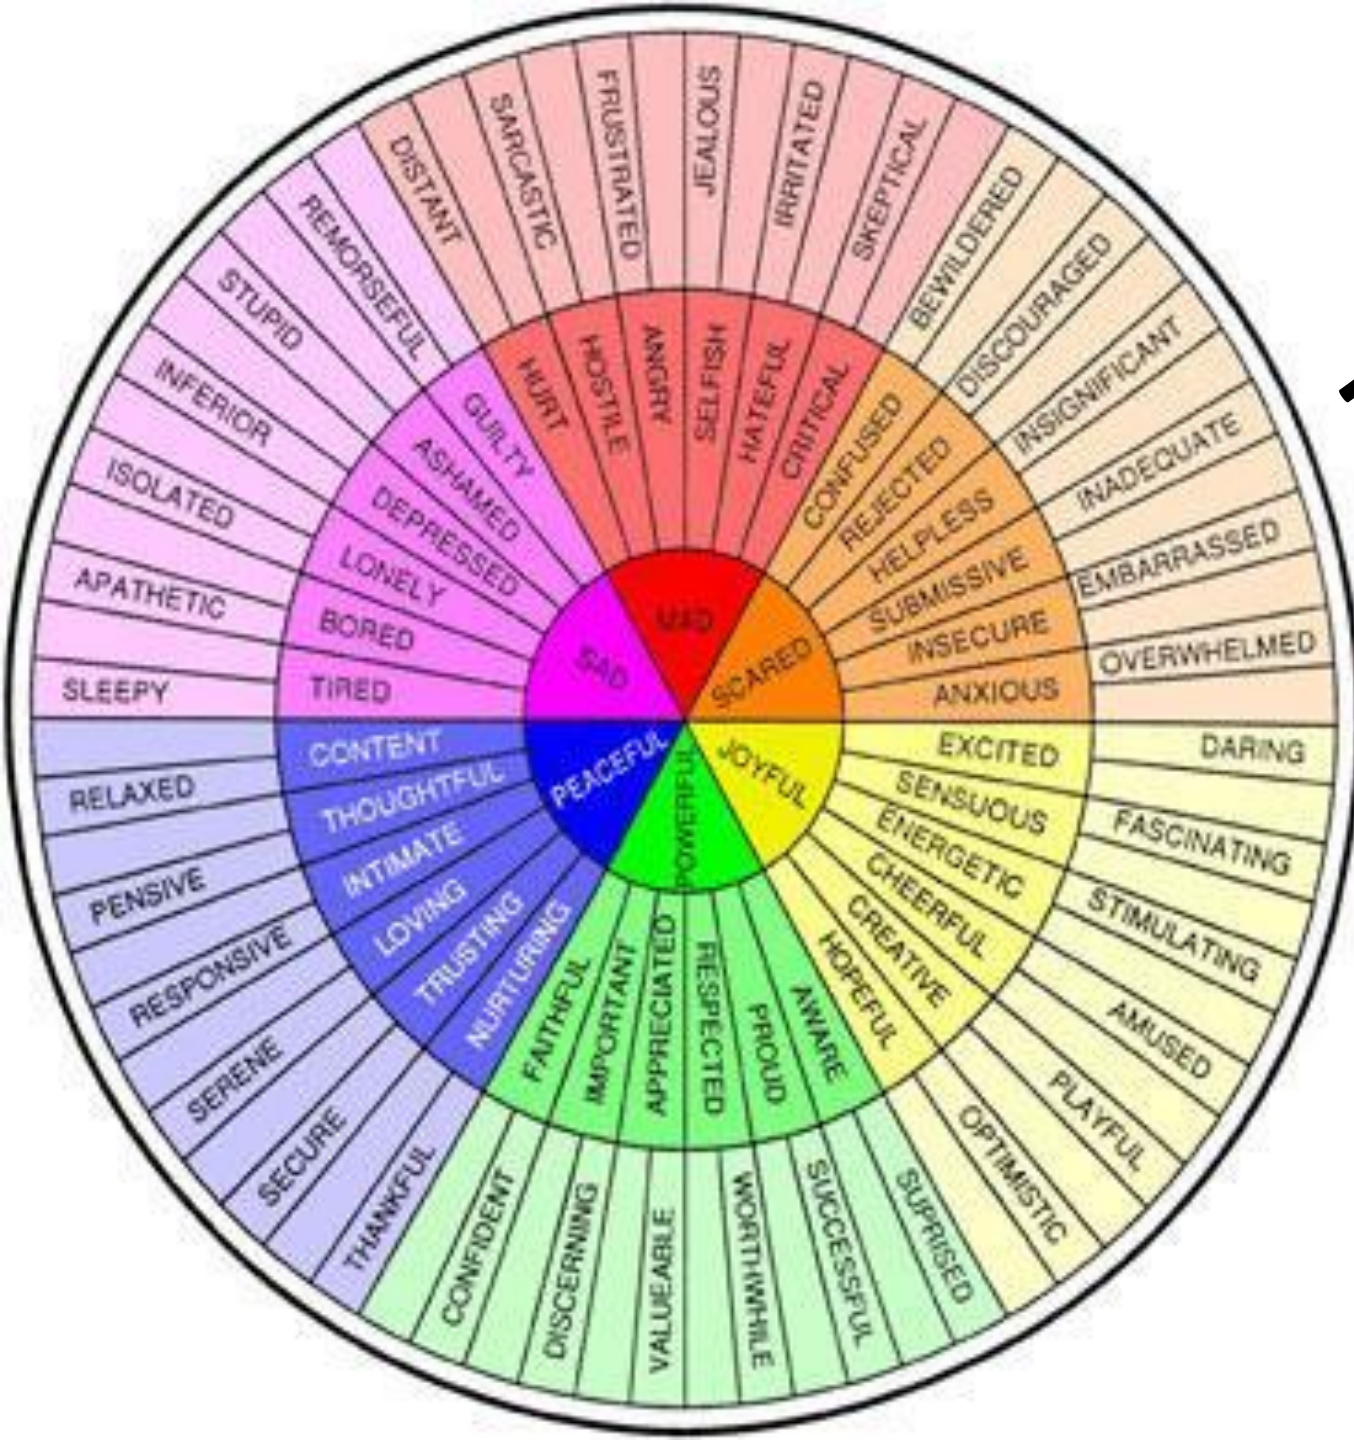

A large collection of colored pencils is arranged in a circle, pointing towards the center. The colors are diverse, including reds, oranges, yellows, greens, blues, purples, and greys. The text "But now there are millions of colors!" is centered in the middle of the circle. The word "colors" is underlined and each letter is a different color: 'c' is green, 'o' is red, 'l' is purple, 'o' is green, 'r' is blue, and 's' is green. The exclamation point is black.

**But  
now  
there are  
millions of  
colors!**

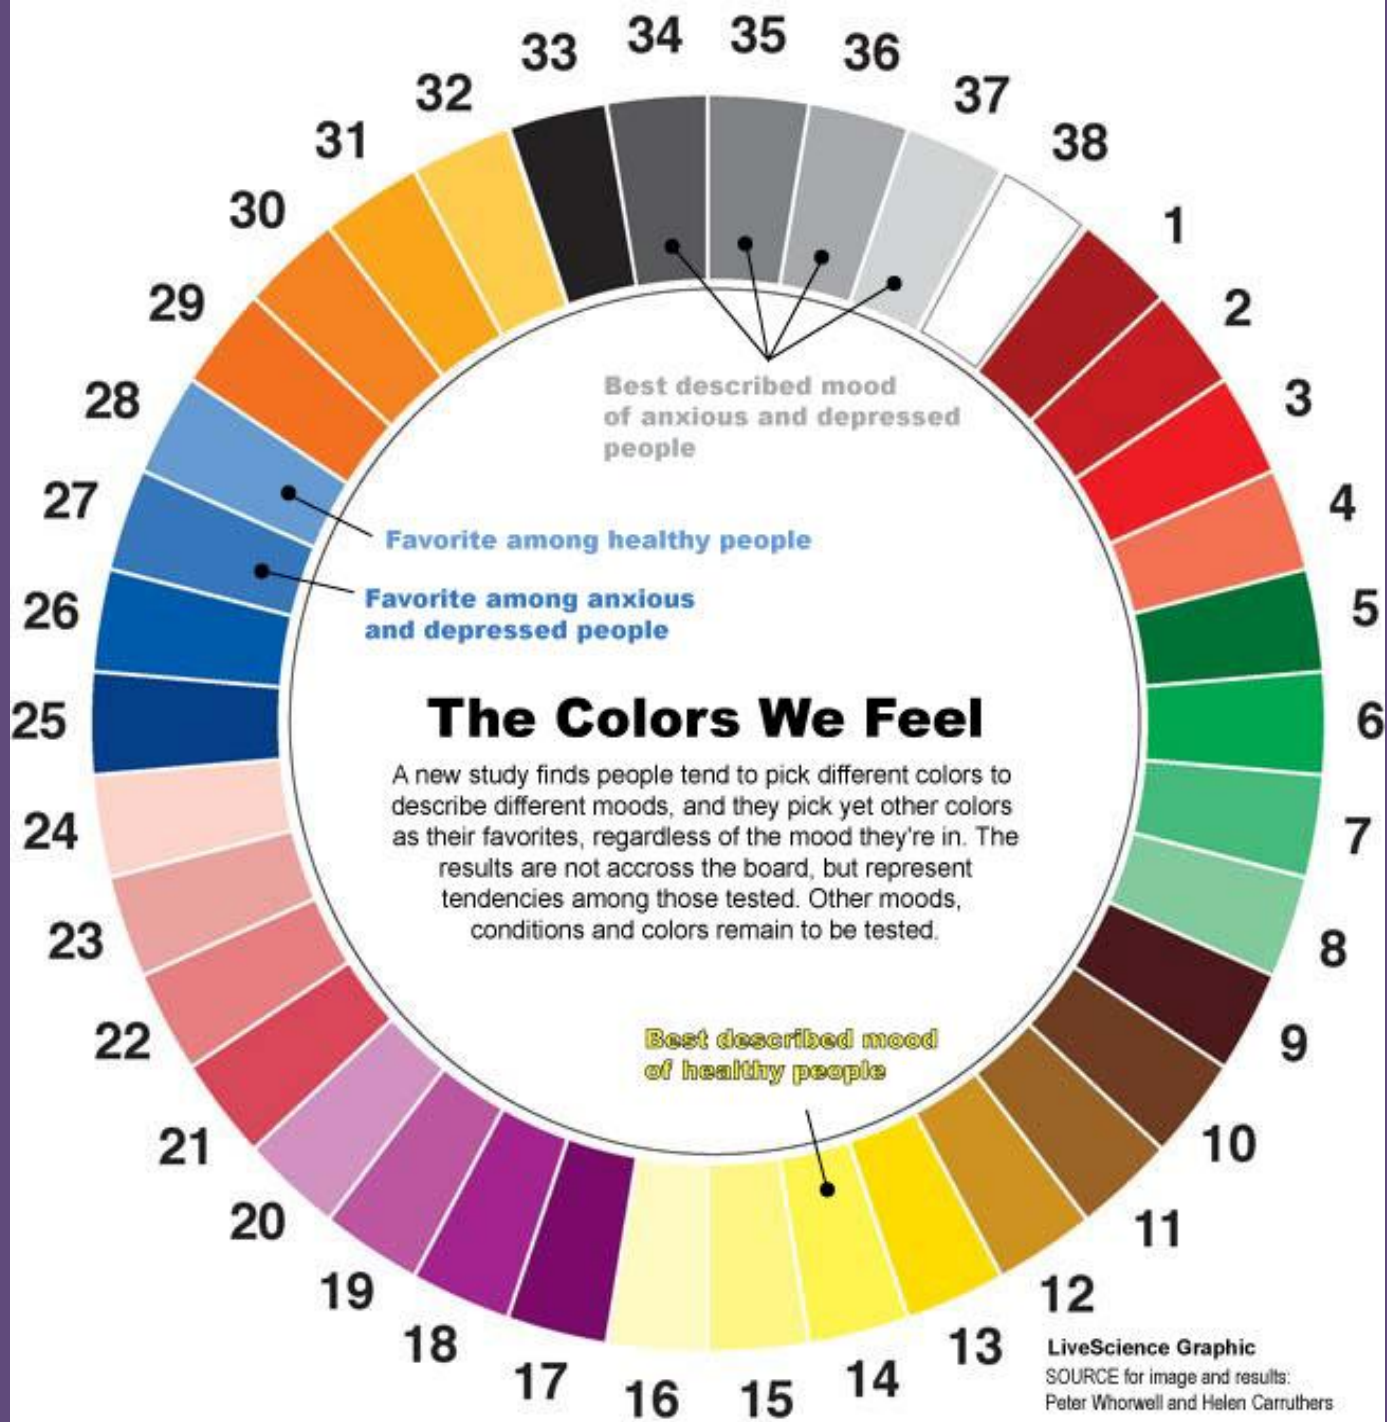

# Color vision

*Some species see no colors, some see a few colors, some see all colors, and some see colors that are not visible to the typical human eye.*

The interpretation  
of colors

**How do**  
**colors**  
**influence**  
**us?**

# What is your favourite color?

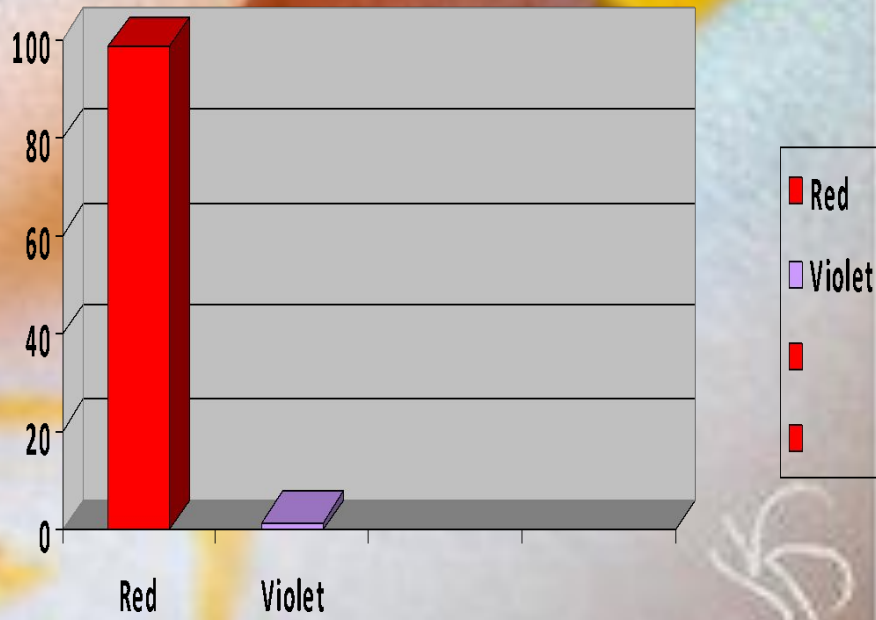

# What is the color for happiness?

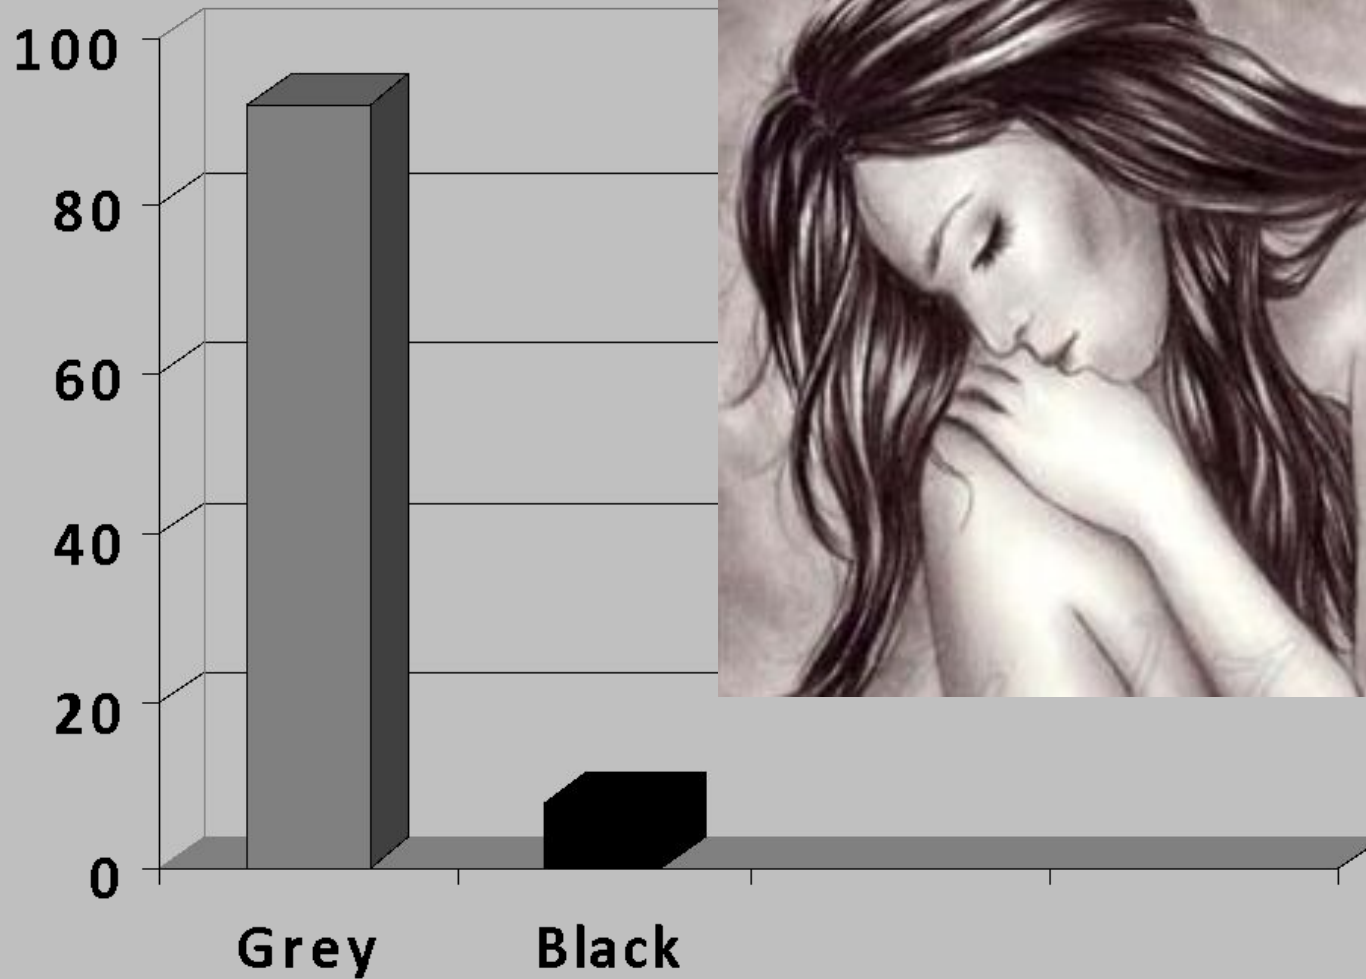

What is the color for  
anger?  
(100% - Black)

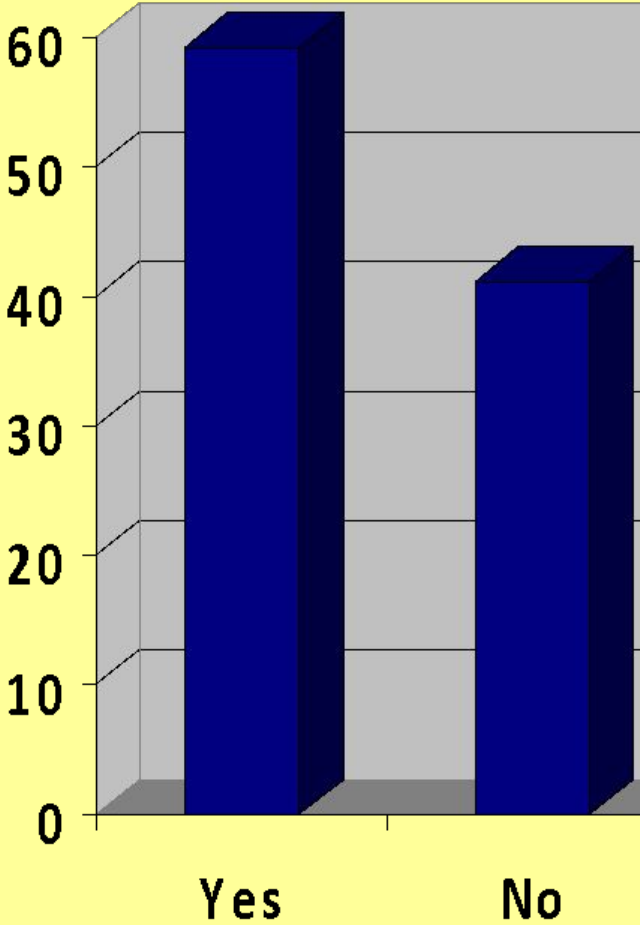

What is the **color** for passion?

# What is the color for sadness?

# Does your **behaviour** depend on the **color** of **clothes** you wear?

# What do you think about life without colors?

The most popular answer is that they can't imagine our life in black and white shades. It's impossible to live without colors.

**The world of colors is boundless!**

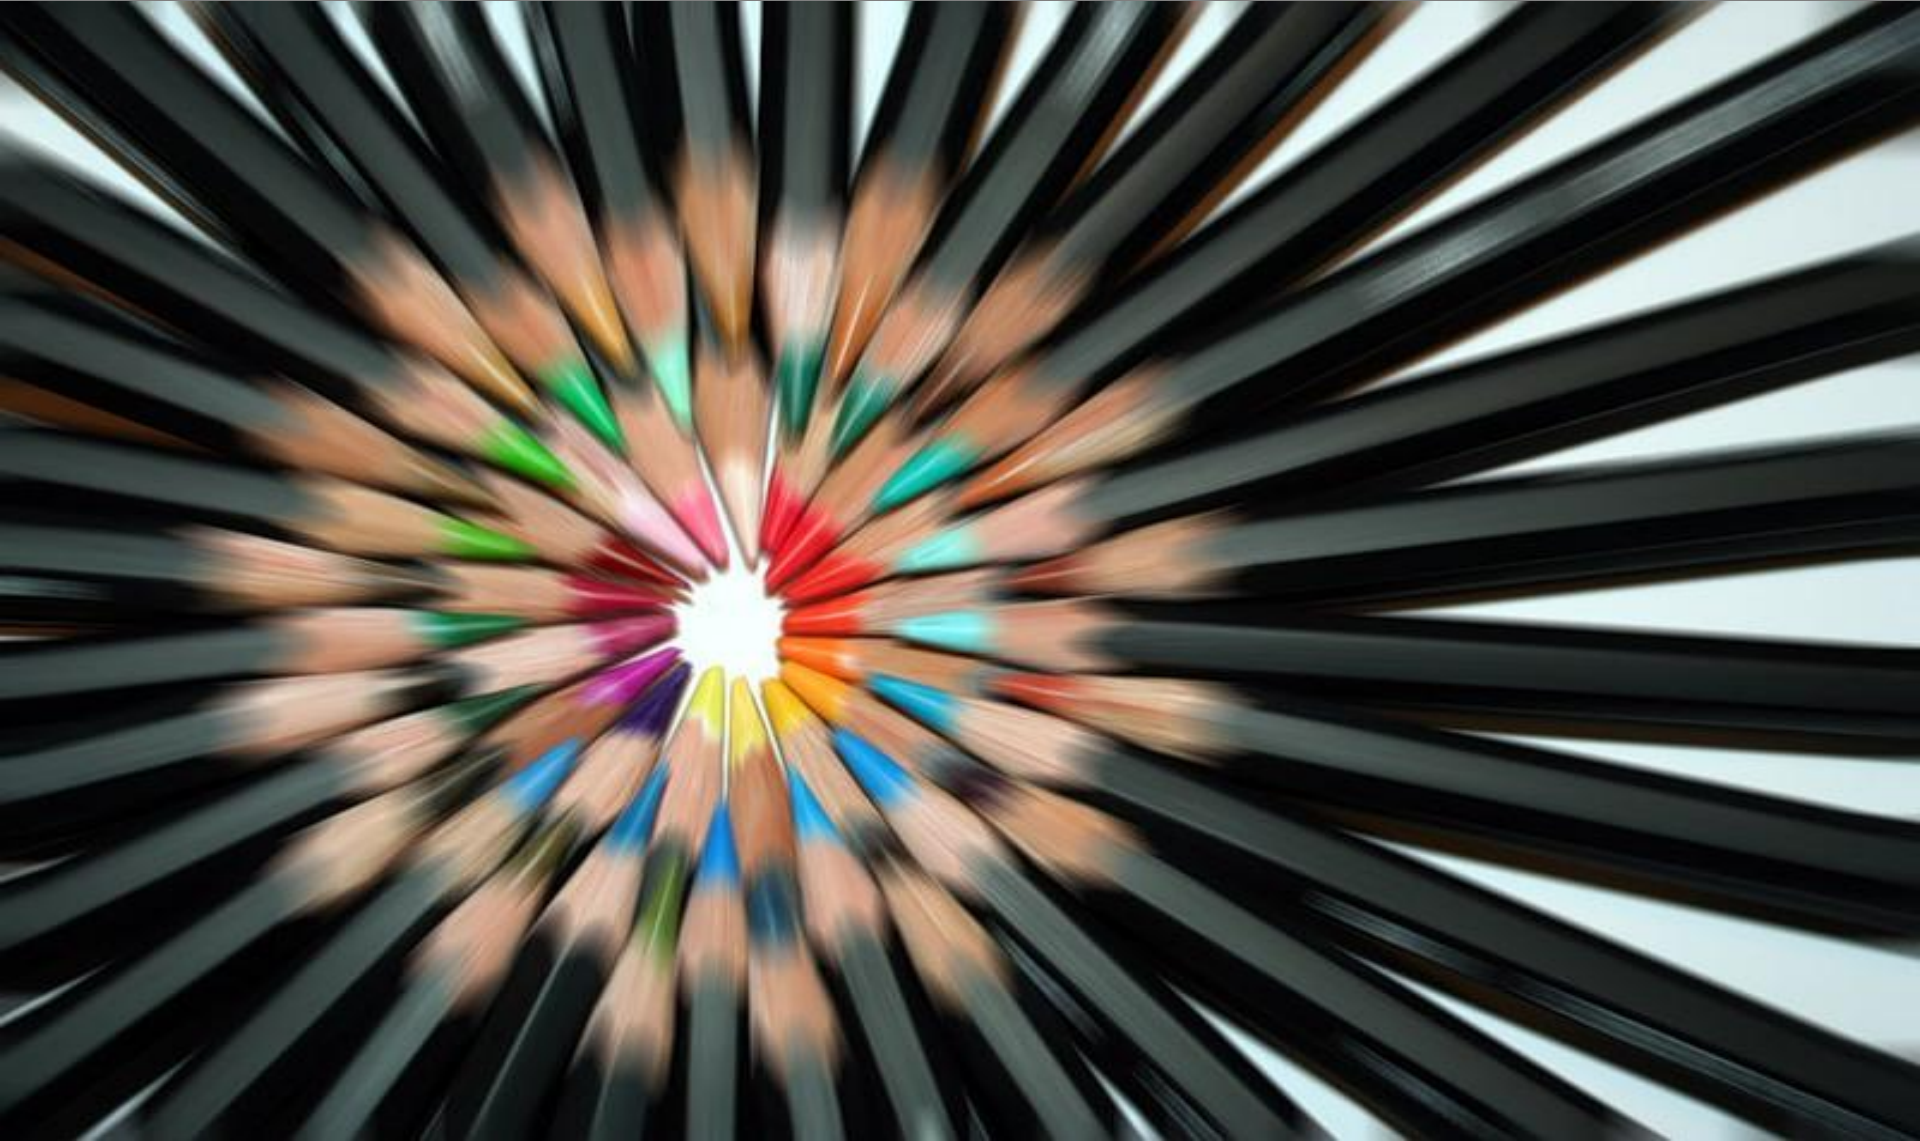

**It's very interesting to live in it.**

**It's a real wonder that we can see colors.**

Our life would be boring and monotonous without colors .
