# Определение модуля

Модуль действительного числа  $a$  – это неотрицательное число (обозначается  $|a|$ ), определяемое так: если  $a \geq 0$ , то  $|a| = a$ , если  $a < 0$ , то  $|a| = -a$ .

Например:

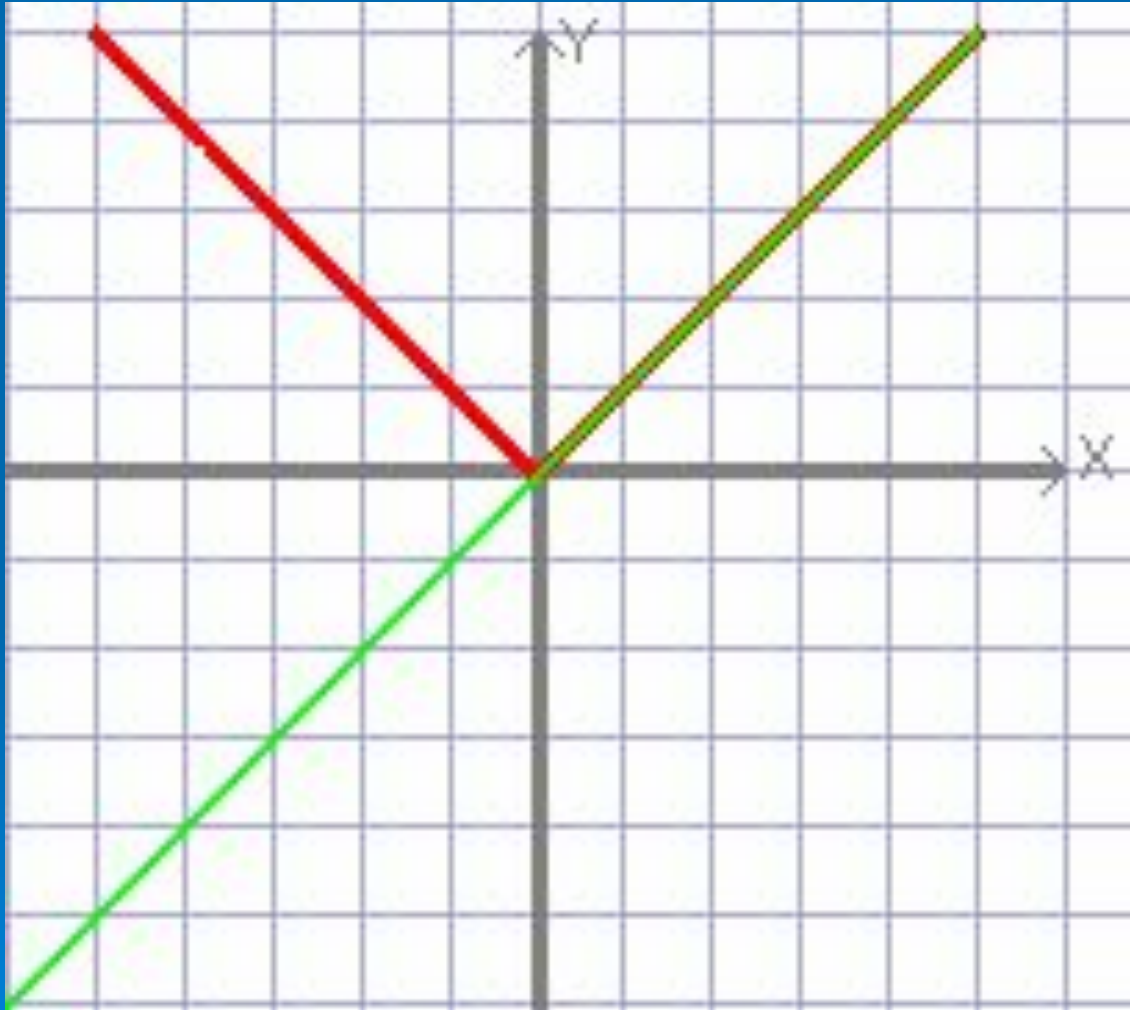

$$|3| = 3; \quad |0| = 0;$$

$$|-5| = -(-5) = 5.$$

$$|x| = \begin{cases} x, & \text{если } x \geq 0 \\ -x, & \text{если } x < 0 \end{cases}$$

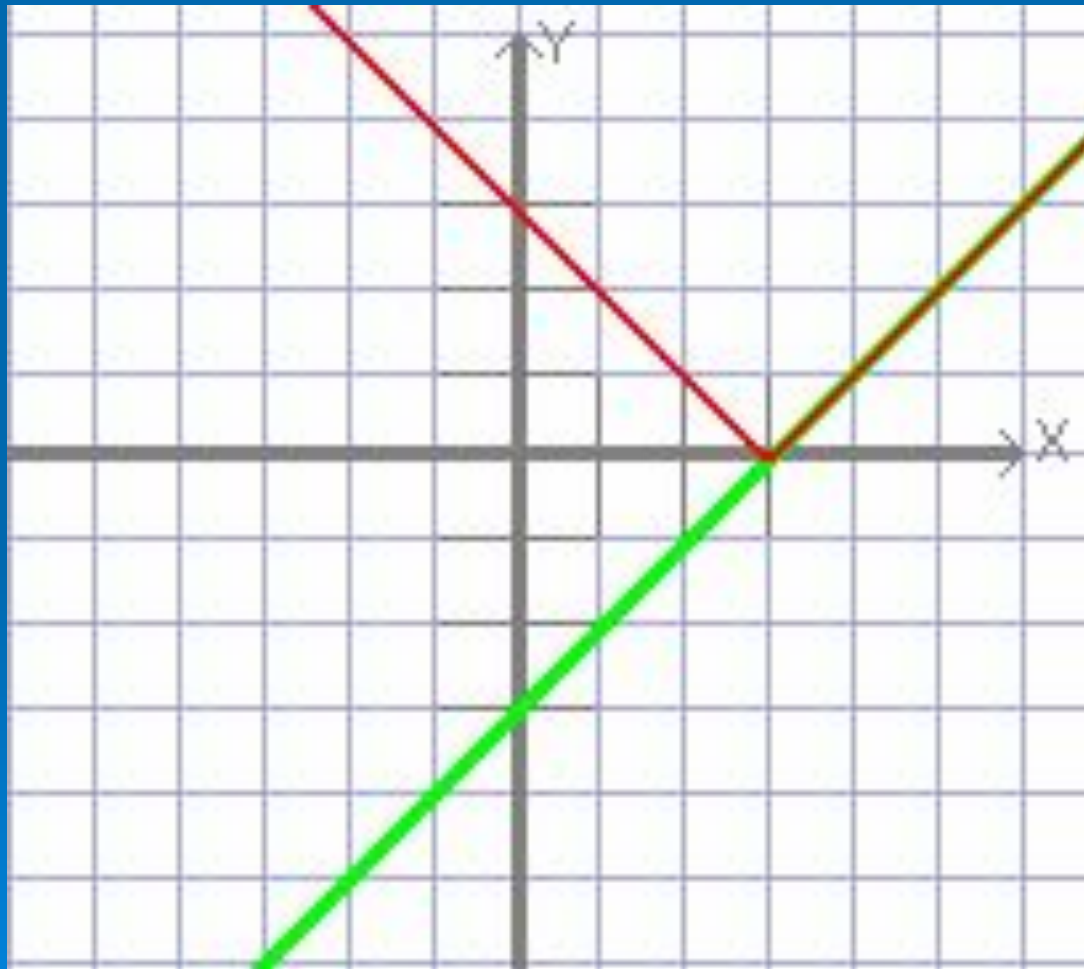

$$y = |x|$$

$$y = x$$

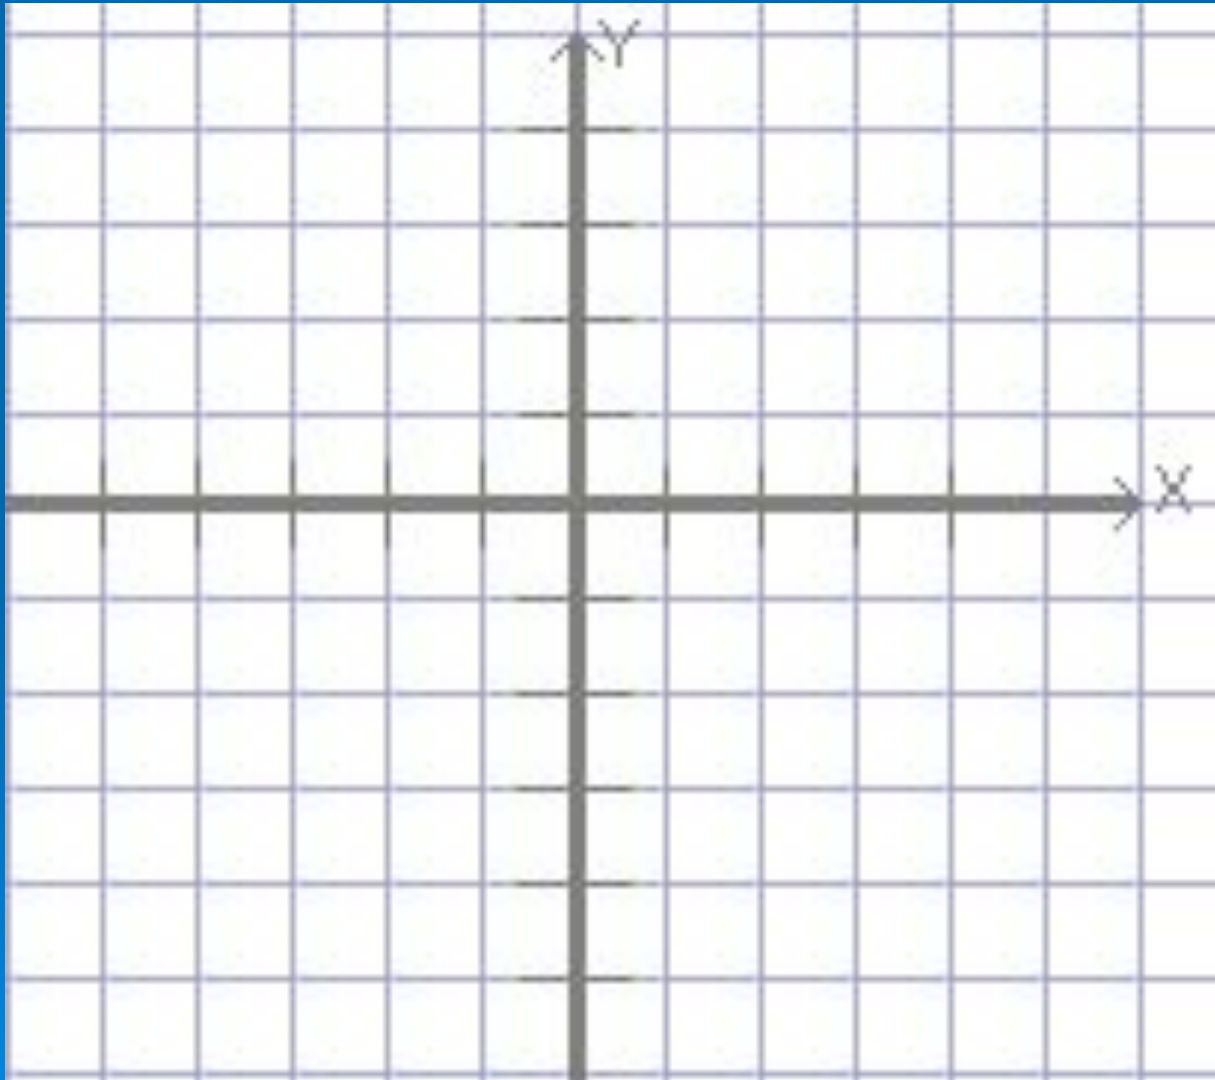

$$y = |x - 3|$$

$$y = x - 3$$

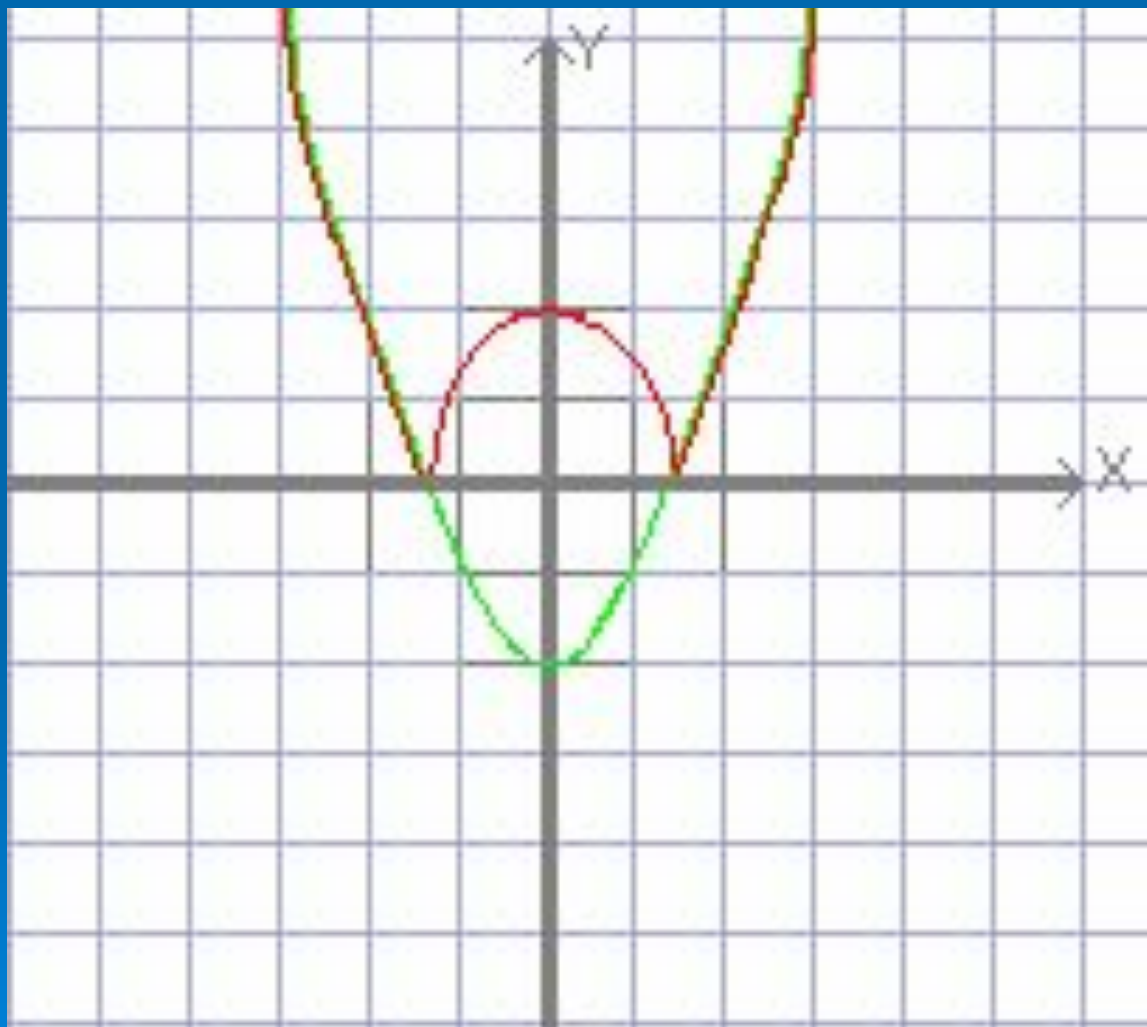

$$y = |x^2 - 2|$$

$$y = x^2 - 2$$

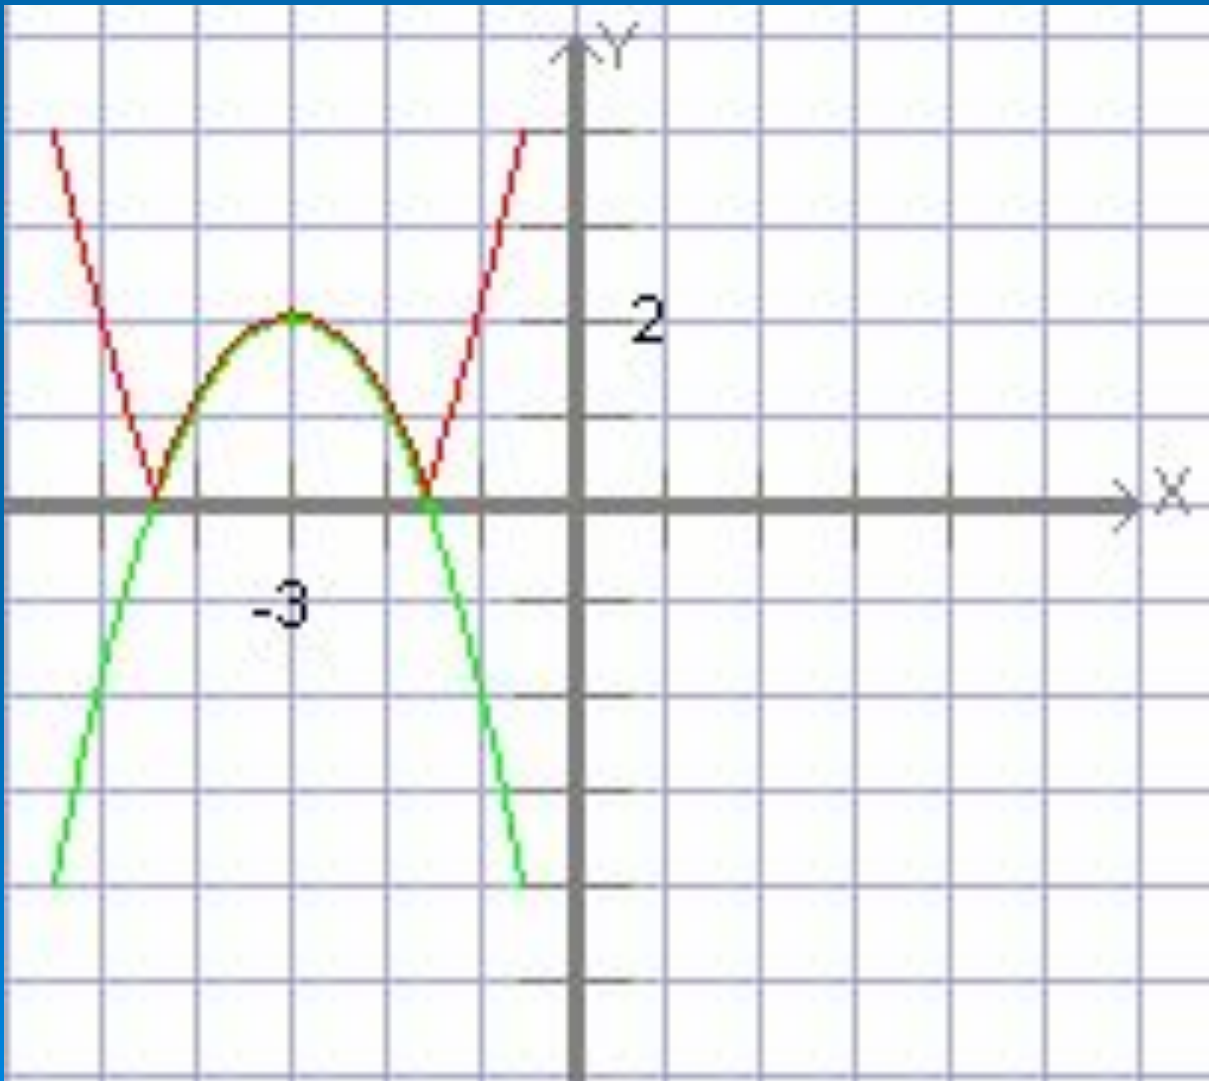

$$y = |x^2 - 2|$$

$$y = x^2 - 2$$

$$y = -(x+3)^2 + 2$$

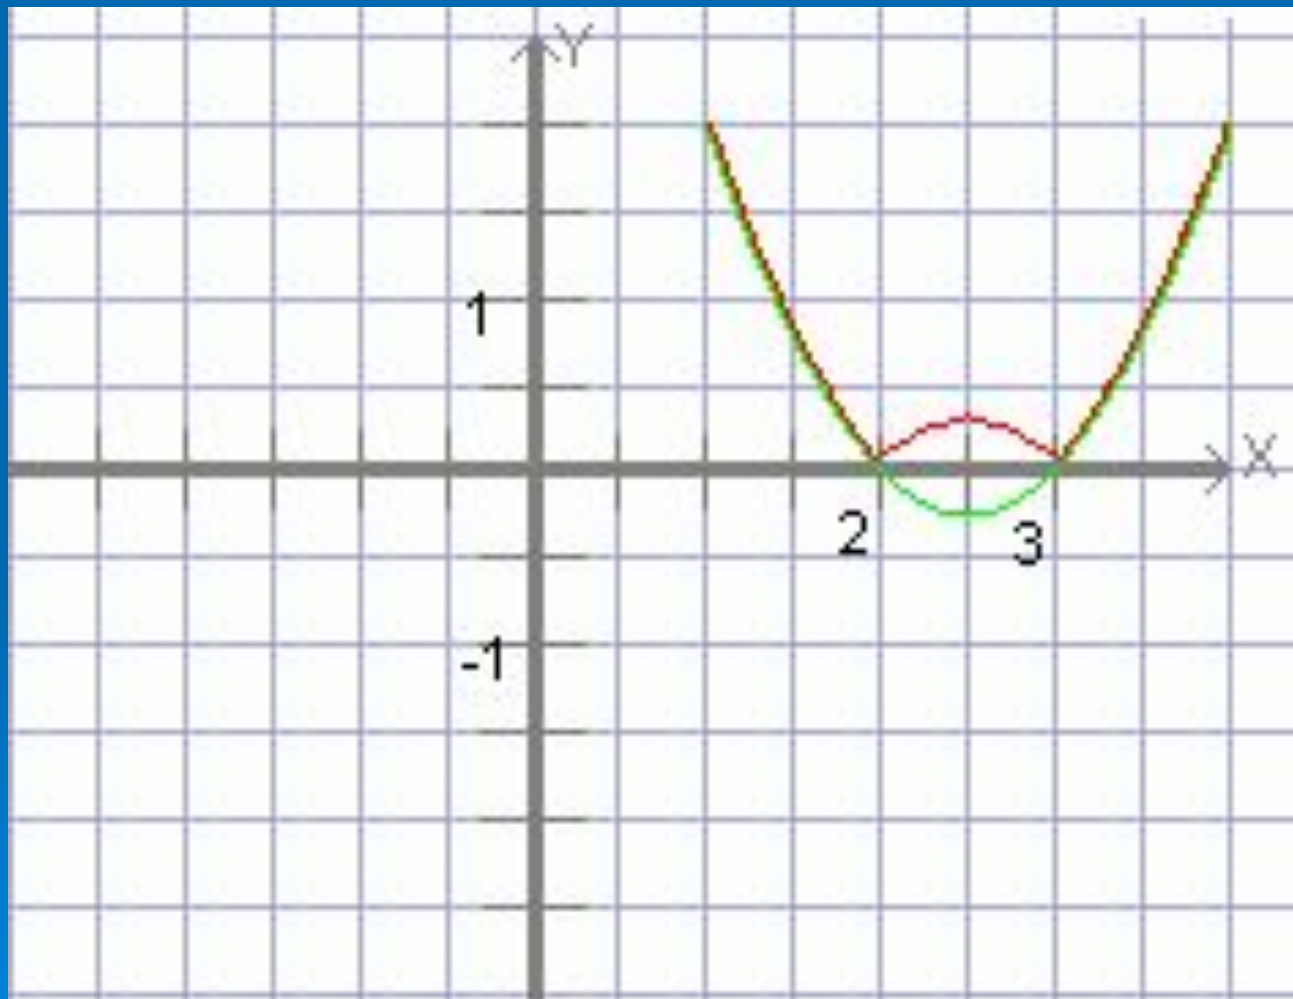

$$y = |-(x+3)^2 + 2|$$

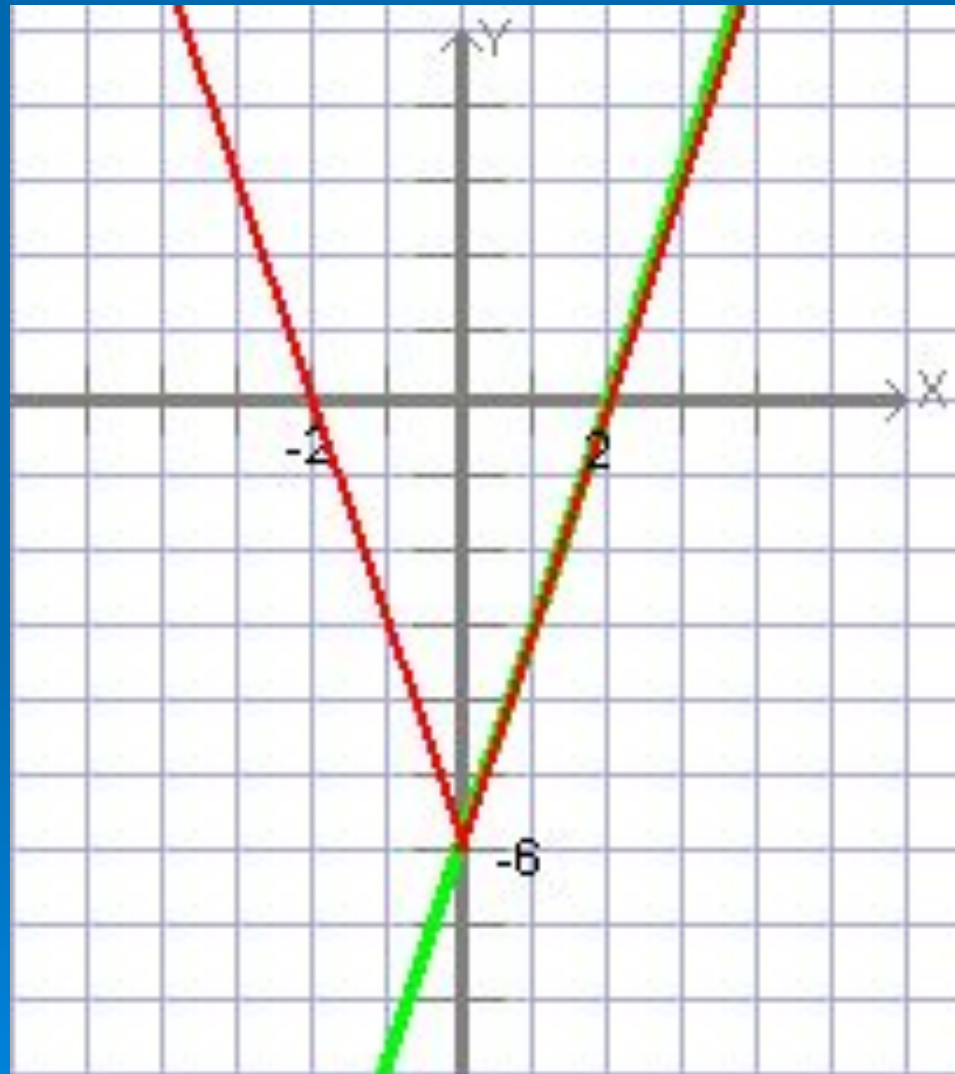

$$y = x^2 - 5x + 6$$

$$y = |x^2 - 5x + 6|$$

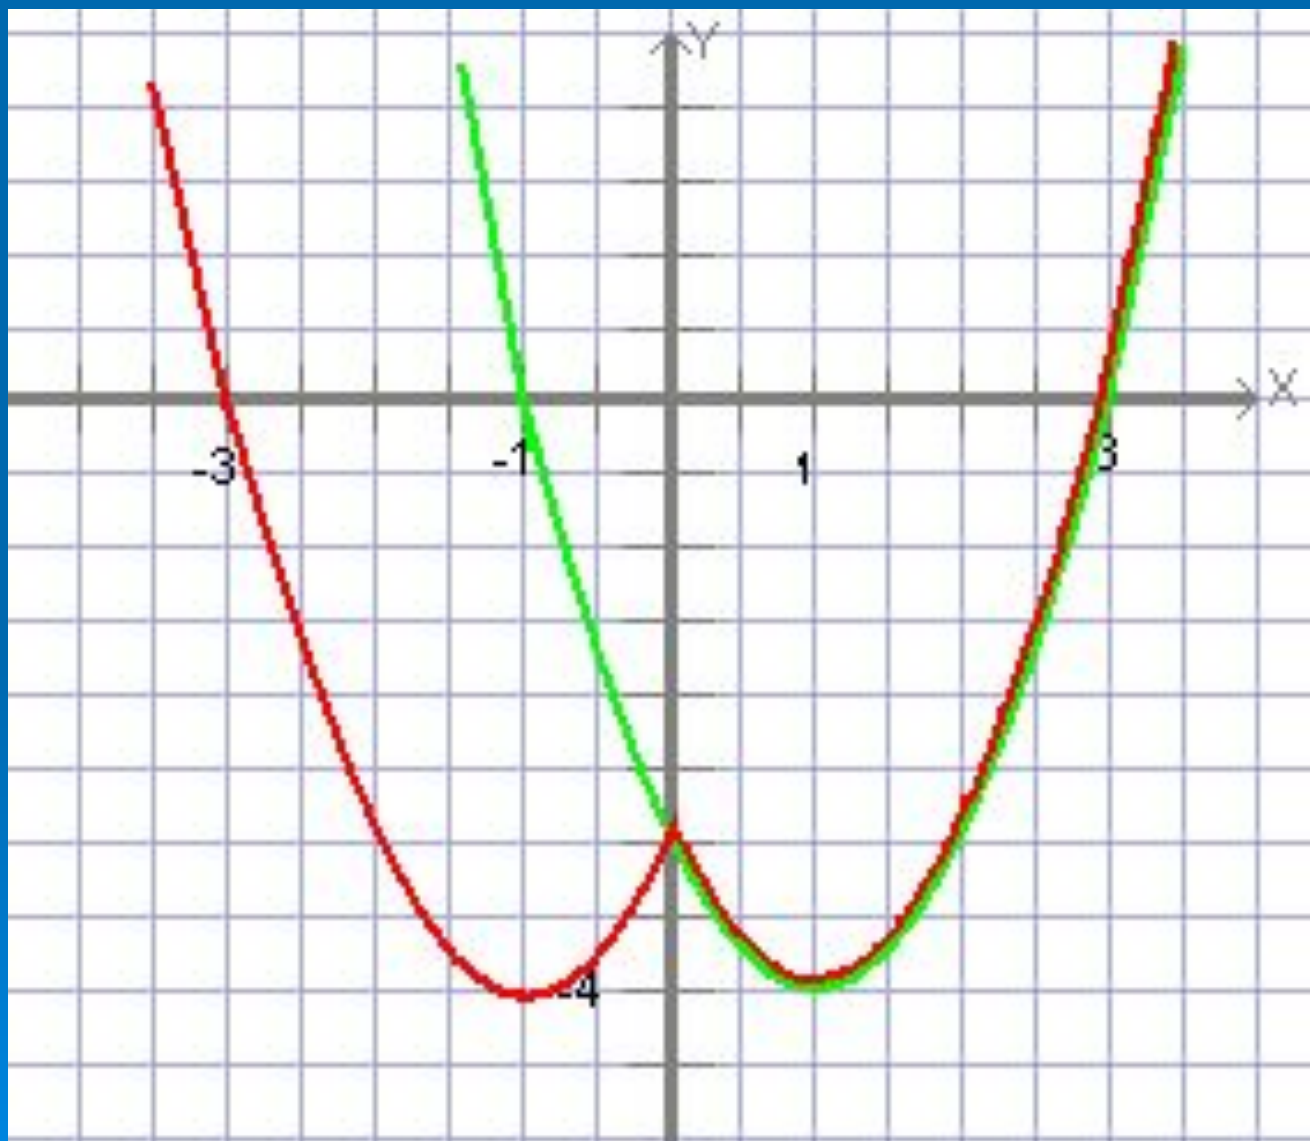

$$y = 3x - 6$$

$$y = 3|x| - 6$$

$$y = x^2 - 2x - 3$$

$$y = x^2 - 2|x| - 3$$

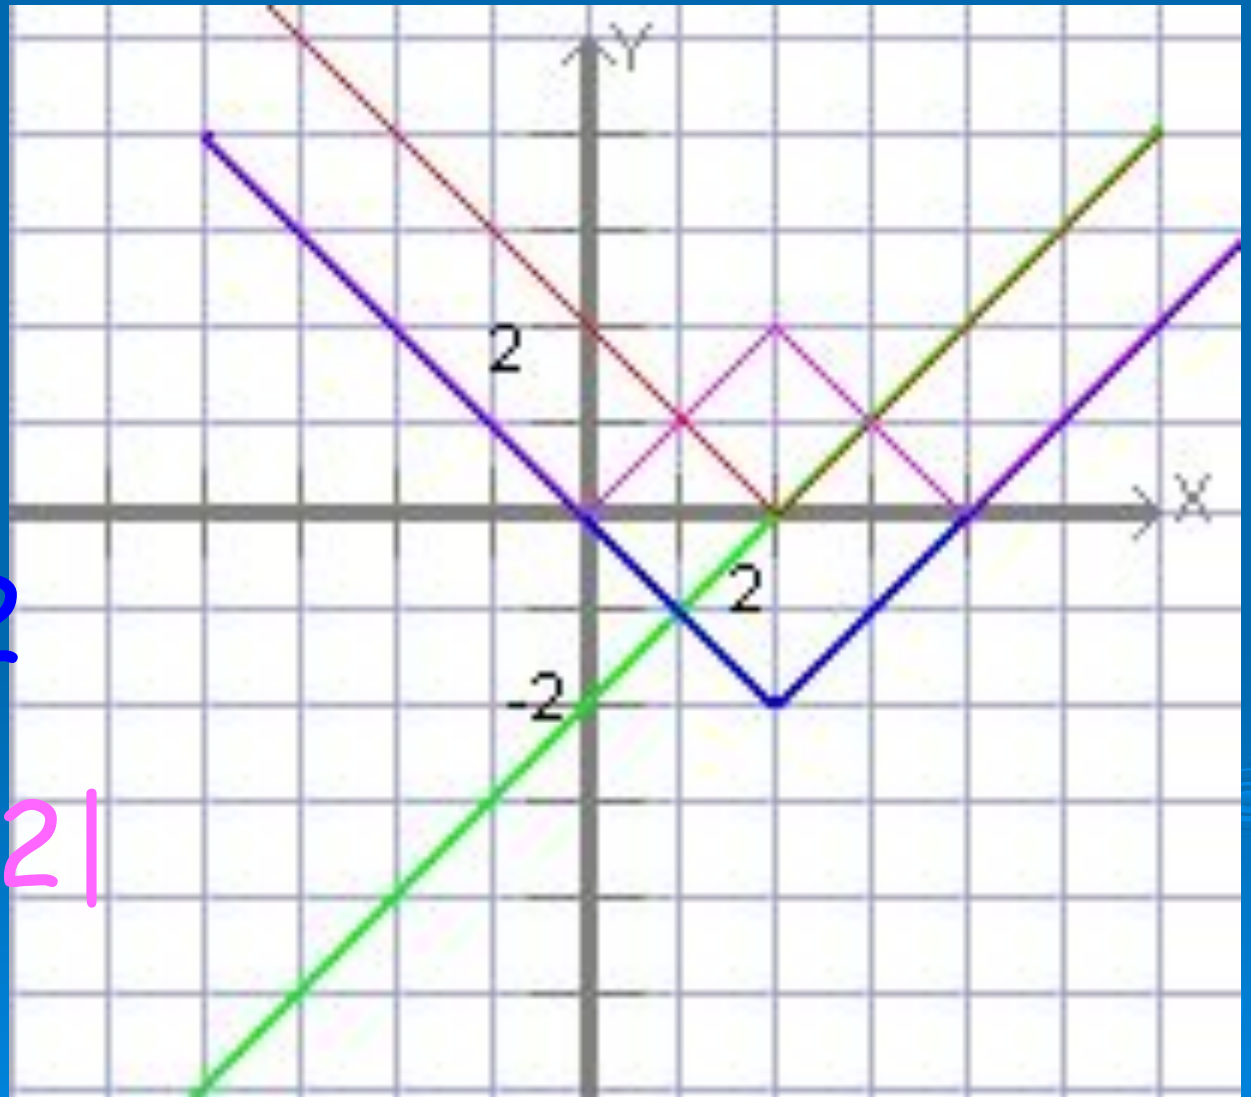

$$y = ||x-2|-2|$$

$$y = x - 2$$

$$y = |x-2|$$

$$y = |x-2| - 2$$

$$y = ||x-2|-2|$$

$$y = |x^2 - 5|x| + 6|$$

$$y = x^2 - 5x + 6$$

$$y = x^2 - 5|x| + 6$$

$$y = |x^2 - 5|x| + 6|$$
