# **Contents**

- 1. History of our village**
- 2. Ecological situation today**
- 3. Litter around us**
- 4. Measures of reducing  
environmental problems in  
our home place**

# History of our village

**We live in Big Volkovo village. Local pond, wood, plenty of springs, full harmony and happiness – there is everything in our lovely village. It is placed in a picturesque area. The main street Centralnaya lasts almost on 3 km long, there are two streets as well: Molodyozhnaya and Zarechnaya streets. Homes are basically wooden here. But there is a construction of modern brick houses too.**

# Modern houses

# Ecological situation today

**The village Big Volkovo is far from large industrial centres, and influence of sources of air pollution of neighbour Uvinsky and Mozhginsky areas practically does not affect in any way in view of domination of the western winds. For village the contribution of stoked smoke gases from boiler-houses and exhausts from motor transports (technical**

**Water consumption  
and water removal  
have direct influence  
renders on quantity  
and quality of local  
water resources.**

**As water  
consumption, as a  
rule, we understand  
a fence of water from  
a source, its using for  
industrial,  
agricultural or  
household needs of  
the population, and  
then returning of  
water in water object,  
but already in other  
place, in smaller**

**In our village the basic sources of water pollution are discharge of household sewage, waste of cattle-breeding farm complexes and throwing of unnecessary dust.**

**Our local small river Sedmurcha dries up because trees near it are cut down.**

# Litter around us

**As local people are not concerned about nature, they throw away rubbish everywhere. There are only two places where one can put his or her litter in our village, but these cans are overfilled. It causes the problem of unsanctioned scrambles.**

# **Measures of reducing environmental problems in our home place**

- 1. To increase ecological culture of people**
- 2. To make our village a better place**
- 3. To clean up local springs**
- 4. To make people recycle plastic and glass. For this purpose it's important to organize gathering and exporting collected litter in Vavozh town (it is a district center)**
- 5. A place around farms and garage must be filled by a protective shaft, for prevention of sewage hits in the local river and pond**

# Thank you for your attention!
