

Endangered species of animals

Kiwi bird

Kiwi are flightless birds endemic to New Zealand.

The kiwi is a national symbol of New Zealand

Nationwide studies show that on average only five percent of kiwi chicks survive to adulthood

In 1851, London Zoo became the first zoo to keep kiwis.

All kinds of kiwi have strong legs and tetradactyl long, narrow beak with nostrils at the tip

The wings are not developed, the tail is missing

Way of life they are only crepuscular and nocturnal

nice presentation
