A diagram of the Solar System against a black background. The Sun is a large, bright yellow-orange sphere at the center. Eight planets are shown as smaller spheres of various colors (blue, orange, yellow, brown, green, red, purple, and blue) orbiting the Sun in elliptical paths. The orbits are represented by thin, light-colored lines. The text is overlaid on the left side of the image.

99.86% mass of our Solar System is Sun. This means that all the planets with their moons and asteroids in the Solar System make up to 0.14% mass of the Solar System.
