по УМК М.З. Биболетовой
с использованием презентации
по теме «Торнадо»**

Tornadoes

**Выполнила:
Власова Светлана Анатольевна
Учитель английского языка
МОУ «СОШ №97»
г.Новокузнецк
2011**

Tornadoes are storms with rapidly rotating winds that form a funnel cloud.

Also known as "twisters," they extend downward from the huge clouds of a severe thunderstorm. The winds that rotate within a tornado usually reach a speed of almost 300 miles per hour! A tornado often sweeps through an area quickly, but it can cause considerable destruction. There have been a number of remarkable reports of tornadoes. In one instance, a schoolhouse was demolished while the 85 students originally inside it were carried more than 400 feet with none killed. There was also a case of five railway coaches, each weighing 70 tons, lifted from their tracks.

Post-Reading Questions

- 1) How fast do the winds rotate within a tornado?
 - a. 85 miles per hour
 - b. 400 miles per hour
 - c. 300 miles per hour
 - d. 70 miles per hour
- 2) Tornadoes are also known as
 - a. thunderstorms
 - b. typhoons
 - c. tempests
 - d. twisters

3) Which of the following statements is true?

A. Eighty-students died when a tornado struck their schoolhouse.

B. A tornado lifted five heavy railroad coaches from their tracks.

Choose the 4 main consequences of a tornado:

heat

cold

pollution

extinction

freezing air

wind

waves

noise

lightning
