Code style

- <https://github.com/bbatsov/ruby-style-guide>
- <https://github.com/bbatsov/rails-style-guide>
- Use two spaces per tab!
- explicit “return” - is evil

OOP - Everything is object, not quite but still...

“hello” - this is object too

```
1
2 a = "hello" # instance
3 b = a.dup    # new object
4
5 # instance method (for object)
6 class << a
7   def to_s
8     "#{self} world"
9   end
10
11  def say_hello
12    self.to_s
13  end
14 end
15
16 a.to_s          # => "hello world"
17 b.to_s          # => "hello"
18 a.methods - b.methods # => [:say_hello]
19 a.class.methods - b.class.methods # => []
```

```
1
2 def a.to_s
3   "#{self} world"
4 end
5
6 def a.say_hello
7   self.to_s
8 end
9
```

42 - this is object too

- 42.instance_variables # => []
- 42.instance_variable_set(:@hello, 'world')
- 42.instance_variables # => [:@hello]
- 42.object_id # => 85

true - this is object too

- `true.instance_variables # => []`
- `true.instance_variable_set(:@false, true)`
- `true.instance_variables # => [:@false`
- `true.object_id # => 2`
- `false.object_id # => 0`
- `nil.object_id # => 4`

Class

```
3 class Point
4   def initialize(x, y)
5     @x, @y = x, y
6 end
7 end
8
9 if __FILE__ == $PROGRAM_NAME
10 puts Point.new(1, 10).inspect #<Point:0x0bf78 @x=1, @y=10>
11 end
```

attribute reader/writer

```
1 class Point
2   def initialize(x)
3     @x = x
4   end
5
6   def x
7     @x
8   end
9
10  def x=(x)
11    @x = x
12  end
13 end
14
```

```
1 class Point
2   attr_accessor :x
3
4   def initialize(x)
5     @x = x
6   end
7 end
8
```

```
1 module ReadWrite
2   def rw(*params)                                # params = [:x, :y]
3     params.each do |_
4       define_method attr do                      # def x
5         instance_variable_get :"@#{attr}"        # @x
6       end                                       # end
7
8       define_method :"#{attr}=(val)" do          # def x=(val)
9         instance_variable_set :"@#{attr}=", val # @x=val
10      end                                      # end
11    end
12  end
13 end
14
15 class Object
16   extend ReadWrite
17 end
18
19 class Point
20   rw :x, :y
21
22   def initialize(x)
23     @x = x
24   end
25 end
26
```

Class / Module

- `Module.ancestors`
 - `# => [Module, Object, Kernel, BasicObject]`

15   include M
16
17   def initialize(x)
18     @x = x
19   end
20 end
```

Classes and Objects

- More information: <http://bit.ly/YZBfmp>

Ruby Blocks

```
1 %w[first second third].each do |item|
2   item.capitalize
3 end
4
5 %w[first second third].each{|i| i.upcase}
6
7 %w[first second third].each <=> block
```

Yield

```
1 require "ostruct"
2 Point = Struct.new(:x, :y)
3
4 class PointList
5   def initialize
6     @data = []
7   end
8
9   def << (other)
10    @data << other
11  end
12
13  def each
14    for item in @data
15      yield item <<<<<<<<
16  end
17 end
18 end
19
20 if __FILE__ == $PROGRAM_NAME
21 list = PointList.new << Point.new(1,3) << Point.new(2,1)
22 list.each do |point|
23   puts point #<struct Point x=1, y=3>, #<struct Point x=2, y=1>
24 end
25 end
```

```
13   def each(block = Proc.new)
14     for item in @data
15       block.call(item)
16     end
17   end
18
19
20
21
22
23
24
25
```

```
13   def each(&block)
14     for item in @data
15       block.call(item)
16     end
17   end
18
19
20
21
22
23
24
25
```

Enumerable

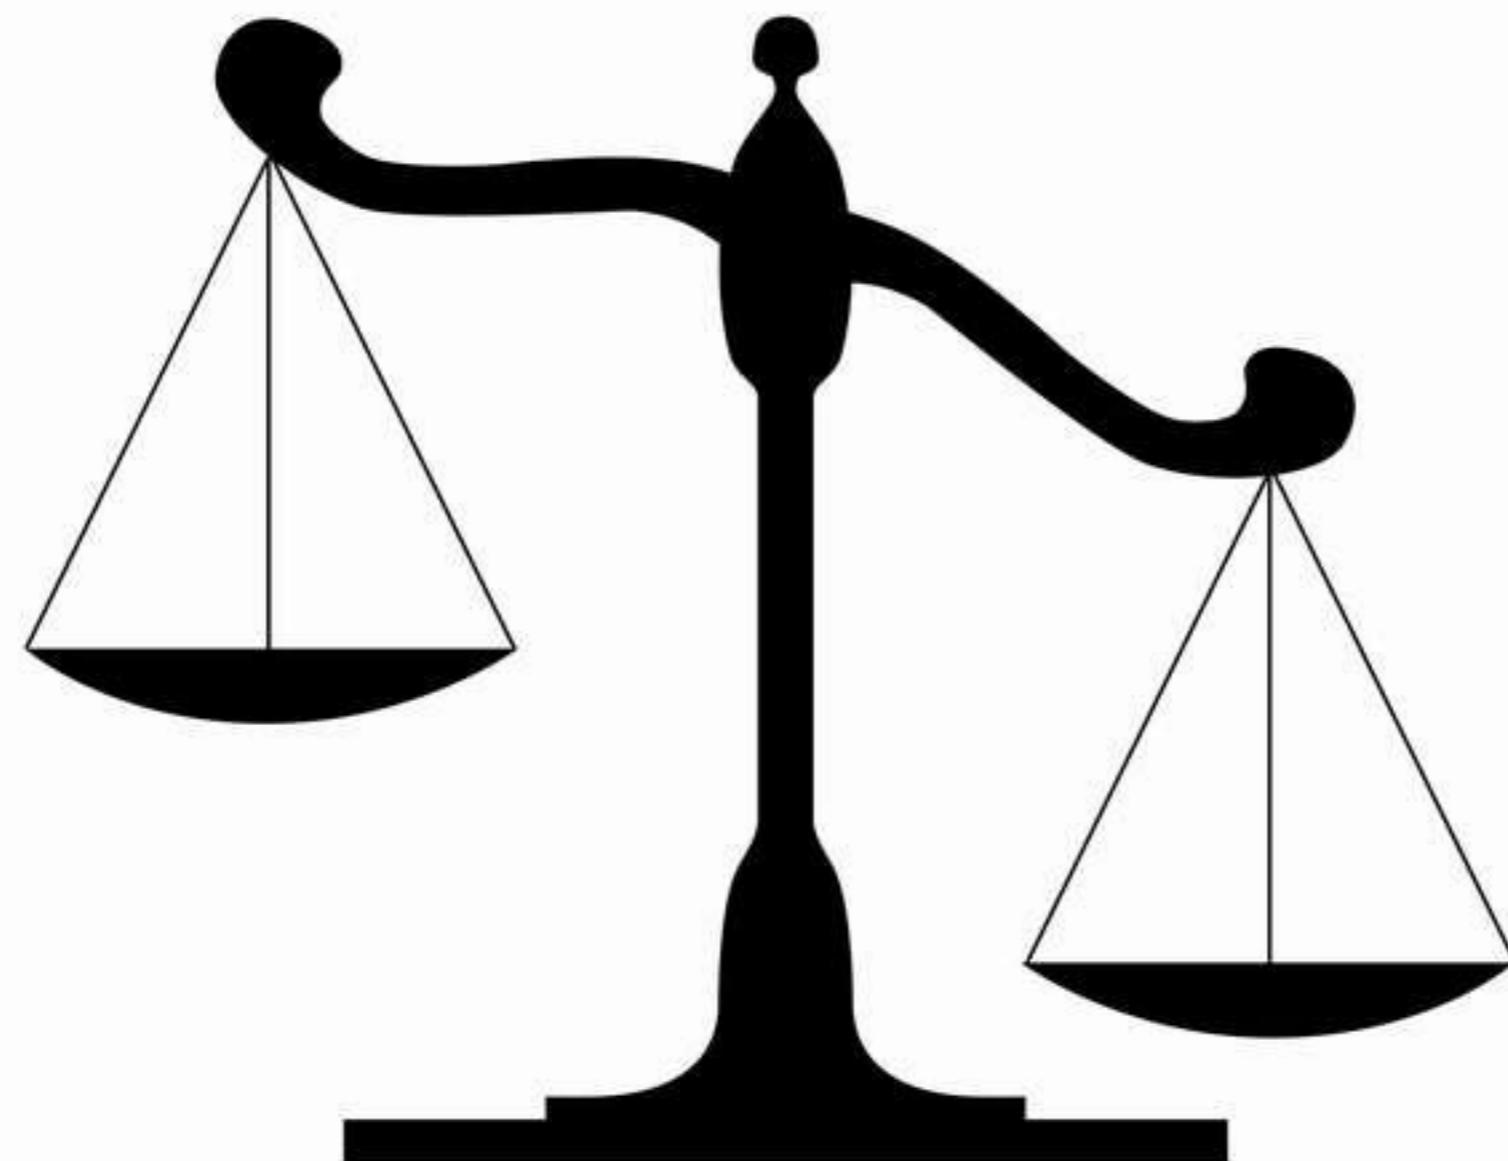

<http://ru.wikibooks.org/wiki/Ruby/Справочник/Enumerable>

```
1 require "ostruct"
2
3 Point = Struct.new(:x, :y) do
4   def distance
5      $x^2 + y^2$ 
6   end
7 end
8
9 class PointList
10 include Enumerable <<<<<
11 # -- code omitted --
12
13 def each
14   for item in @data
15     yield item
16   end
17 end
18
19 if __FILE__ == $PROGRAM_NAME
20 list = PointList.new << Point.new(1,3) << Point.new(2,1) << Point.new(2,2)
21 list.sort_by(&:distance)
22 list.sort_by {|e| e.distance }
23 end
```

Comparable

$1 < \bar{0} > -1$

Comparable

```
1 require "ostruct"
2
3 Point = Struct.new(:x, :y) do
4   include Comparable <<<<<
5
6   def distance
7     Math.sqrt(x**2 + y**2)
8   end
9
10  def <=>(other)
11    self.distance <=> other.distance
12  end
13 end
14
15 if __FILE__ == $PROGRAM_NAME
16  puts Point.new(1,3) == Point.new(2,1) # false
17  puts Point.new(1,3) == Point.new(3,1) # true
18  puts Point.new(2,3) >= Point.new(1,1) # true
19  puts Point.new(2,3) <= Point.new(1,1) # false
20  puts Point.new(2,2).between? Point.new(2,1), Point.new(2,3) #true
21 end
```

Mad Ruby

#to_proc (&)

```
1 class Symbol
2   def to_proc
3     Proc.new { |*args| args.shift.__send__(self, *args) }
4   end
5 end

19 if __FILE__ == $PROGRAM_NAME
20   list = PointList.new << Point.new(1,3) << Point.new(2,1)
21 list.sort_by(&:distance)
22 list.sort_by {|e| e.distance}
23 end

1 [1, 2, 3].map(&:to_s) # => ["1", "2", "3"]
2 [3, 4].inject(&*) # => 60
```

Advanced Examples

```
1 File.open('nginx.log', 'r') do |file|
2   while line = file.gets
3     puts line
4   end
5 end
7 # -- possible implementation --
8 class File
9 def open(file, option)
10 if block_given?
11   f = fopen(file, option)
12   yield f
13   f.close
14 end
15 end
16 end

1 ActiveRecord::Base.transaction do
2   # -- code omitted --
3 end
4
5 # -- possible implementation --
6 module ActiveRecord
7 class Base
8 def transaction
9   # -- start transaction
10 yield
11 # -- commit transaction
12 rescue ActiveRecord::Rollback
13 # -- roll back transaction
14 ensure
15 # -- close transaction
16 end
17 end
18 end
```

The End
