Crocodiles are blind in the water but very keen of sight in the air. Crocodiles are color-blind.

Unlike all other **insects**, flies have five eyes. They have two large eyes and three smaller eyes between them.

**Snails have
four noses**

The eyes
of ostrich
are bigger
than their
brains.

An ant can lift
fifty times of it's
own weight

Giraffes
have no vocal
cords.

A cockroach can survive without its head for nine days. At the end of ninth day, it dies because of hunger

A close-up photograph of a large, hairy tarantula spider. The spider is dark in color, possibly black or dark brown, and is covered in thick, greyish-brown hairs. It is positioned on a dark, textured surface that appears to be soil or volcanic ash, with some small, light-colored debris scattered around. The spider's legs are thick and also covered in hair. The background is slightly out of focus, showing more of the dark ground and some small, light-colored particles.

A tarantula can
survive for more than
two years
without food

The End
