Computers in our life

- Lately computers have filled our life. Now they are almost in each family. We have got used to them and we do not imagine our leisure without this miracle-machine.

- With the help of computers the Internet has entered into our life. It became an integral part of a life of each person. Now people cannot live a day without checking of mail and visiting their favourite sites. The Internet is not only the assistant in daily work, it is also the other world in which there are mail boxes, libraries, photo galleries, games, shops. By means of the Internet people can travel to different cities, visit tourist places, communicate with people.

- Recently many people ask a question: " Is the Internet harmful or useful? ". I think, that on this question there is no certain answer. Certainly, the Internet can be the excellent assistant in information search. But if we spend a lot of time on the Internet we will have some problems. We lose a touch with the real world, get in a full dependence on a computer.

- As for my attitude to computer, I think, that it is a real helper for the disabled people. And I can give some arguments for it. Firstly, it helps people who have got a lack of mobility to communicate with other people. Secondly, it helps them to feel themselves like normal people. And finally, with the help of computer the disabled people can get money from Internet, I think that it is the most important thing, because not all people can move and thus they sit home.
