- ✓ Alcohol - In beerIn beer, wineIn beer, wine and hard liquor
- ✓ Nicotine - In cigarettes
- ✓ Cannabis - Smoked like cigarettes, or baked in something to eat, like a cake or brownie
- ✓ Methamphetamine - (also known as *Crystal Meth*) - Can be smoked, eaten, injected, or inhaled.
- ✓ Caffeine - In Coffee and cacao (See figure)
- ✓ Cocaine - can be snorted, injected or inhaled (freebasing)
- ✓ Heroin - can be snorted or injected

Legal and illegal drugs

Cigarettes (or tobacco) are legal drugs, but they are often expensive.

Alcohol is another drug that is legal in many countries.

Illegal drugs are drugs that a person is not allowed to have. If a person is caught with illegal drugs, he may be punished. He will perhaps have to go to court, and he may go to jail.

Illegal drugs include:

- Heroin Heroin, diacetylmorphine- a semi-synthetic opioid Heroin, diacetylmorphine- a semi-synthetic opioid. It can be used legally as an analgesic (a painkiller)
- Cocaine Cocaine, a stimulant extract of naturally-occurring plant substances, as the hydrochloride salt. Legally used as an anesthetic.
- Crack, a form of cocaine you can smoke.
- Crystal Meth Crystal Meth, methamphetamine, a stimulant related to amphetamines. Legal use includes the treatment of Narcolepsy
- Marijuana Marijuana, the leaves and flowers of the cannabis plant
- Hashish, the sticky resin from the cannabis plant
- Ecstasy, a pill made from chemicals

Process

Some drugs are in pills –

Other drugs are in powders –

Some drugs come in little crystals -

Dangers

One of the dangers of using illegal drugs is that a person might be caught by the police and charged with a crime. If a judge finds the person guilty, the person might have to go to jail.

One of the dangers of using drugs such as heroin, crack, or crystal meth is addiction.

People who are addicted to drugs may steal money from their friends or family to get more drugs. Some addicts even do robberies, thefts, or other crimes to get money for drugs.

When using some illegal drugs, a person can overdose

Overdosing can hurt a person badly or even kill.

When people inject heroin with a needle they could get an infection or disease such as AIDS or Hepatitis C.

Humanity has used drugs since the earliest times, mainly to relieve pain or for ritual purposes. Over the past century, however, this use has degenerated into abuse, dependence and crime.

In our age of intensive international exchanges, illicit drug production, trafficking and consumption have spread at an epidemic rate. About forty million people in the world abuse drugs. Today, no the user, his family and society at large. People are enslaved they are prevented from participating in society. Drug abuse and trafficking lead to violence, criminality and economic dislocation.

The producers and traffickers of illicit drugs have corrupted civil servants and destabilized entire governments. The erratic flow of drug money is polluting whole economies. Developing countries have been particularly affected consequences of drug abuse, due to a lack of resources. Over the years, the international community has become aware of the danger it is facing and has concluded that a *global problem requires a global response.*

States in transition drug trafficking groups and criminal organization tend to develop. They invariably accompany the transition to transition to democracy and the free market. In Russia there has been a dual transition democracy and a free market economy. Russian there has been a dramatic increase in drug abuse and drug trafficking.

The last decade has seen a steady increase drug in the world, in led governments *to adopt wide-ranging countermeasures. New drug control laws,* were adopted by many parliaments. The Russian Federation has acceded to all the International Conventions.

In 1995, our Government approved a Federal Programme of Comprehensive Measures against Drug. The main aim abuse and trafficking, and to reduce the level of crime.
