

Ecology in the world

Britain

- In Britain there are many cars, buses, trains. And also there are many factories and plants. All these things produce carbon dioxide and other toxic gases. In London is especially more these things. If you think that London is very clean and tidy you are wrong. But in some parts of London like White Tower is very clean. People can put bottles everywhere they want. They can dump rubbish everywhere!

Russia

- In Russia in big cities like Moscow the air is very polluted. There are many traffic jams, because there are many cars. Everyone wants to have a car, but not everyone can. And yet many people have cars. Russian people dumps rubbish everywhere and at any time. Cars are very popular nowadays. After the picnic people leave bottles, packages and other rubbish!

Sea water

- There is no ocean or sea which is not polluted or used as a dump. The Pacific Ocean, especially, has suffered from nuclear pollution. Many seas are used for dumping industrial waste. This pollution kills fish and reptiles.
- Factories use clean water, and after the water is used it become poison.

Total:

- Our planet is in great danger!
- We must save it!
- If we wont save it we can die!
- Ecological problems are very global. We must solve the problem!
- You must not dump rubbish on the streets of your city!

A decorative vertical bar on the left side of the slide, featuring a series of horizontal stripes in various shades of blue, teal, yellow, and black, set against a light gray background.

Thanks for watching!
