How to clear cache in a cross application

**How to clear cache in a cross application,
multi server environment in Symfony**

Performance Optimization

The many ways in Symfony to accelerate performance

Your environment consists of a multi-server

You use two or more servers that share common storage

Sharing the same database, or a single server

great opportunities for performance optimization

You must device a caching strategy

Your database is centralized

The more vital for you to clear unnecessary cached

Symfony installation run optimally with good performance

Method 1 for cache clearing and its challenges in a multi server environment

Let's assume that you use `sfFileCache`

As your caching strategy

Now the challenge is to clear either all or parts of your cache

Well, you might want to use `symfony: cc` or the `sfViewCacheManager`

This essentially will not work due to the following reasons

This method when used, does not work across applications

If you trigger it from your backend application

it does not allow you to clear cache on the front end

Secondly, This method works

only with the current server that you are
working on

It poses a challenge for multi server
environments

In your cluster will still maintain the older
version of the cache

Method 2 for Cross Application cache clearing across multiple servers

How to clear cache in a cross application

Multi server environment in Symfony across applications

Can access both the servers simultaneously

A centralized database

Method 2 for Cross Application cache clearing across multiple servers

You can write all the cache clearing rules

process the pending rules

This solution works well on highly frequented

The mbpDistributedCachePlugin optimally serves

By symfony plugin: install mbpDistributedCachePlugin
