

MOTION

Structuring

- What is the motion ?
- Types of motion.
- Acceleration.

First part: definition of motion.

- Motion is the change of position during the time.
- Time, distance.

Second part: types of motion.

- Two basic kinds of motion are straight line and circular.
- Others are combinations of basic motions.

Third part: acceleration.

- The faster the change in the velocity occurs, the greater the acceleration is.
