

Namaskar

Welcome

Consciousness

Soul, Atman

Bod

y

Mind

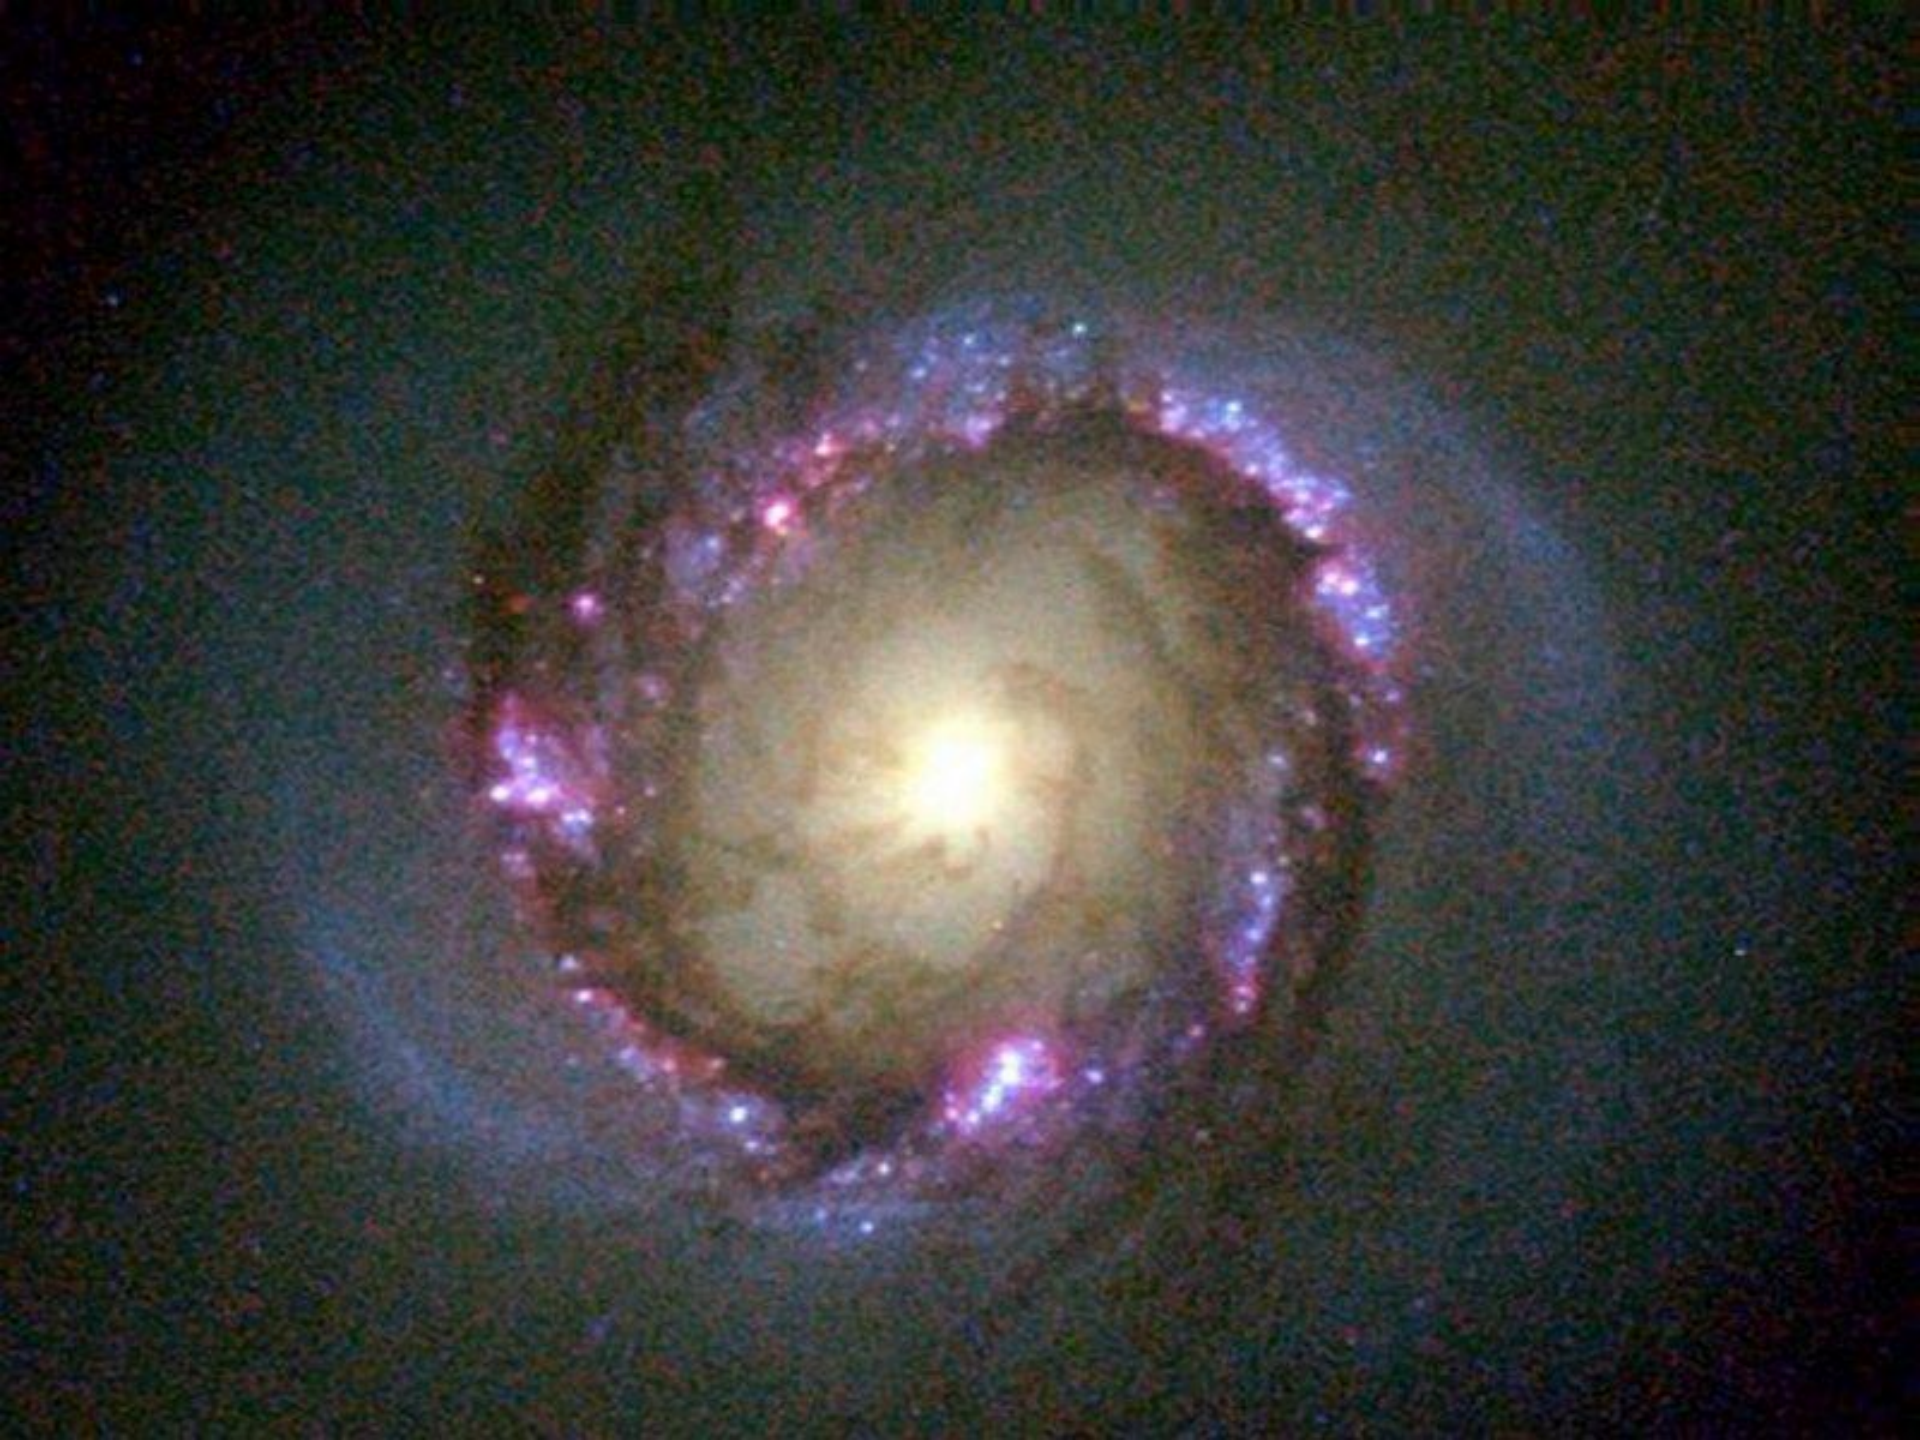

**When we look into the midnight sky
we see a Universe which is so vast.**

For example:

**The light from this galaxy had been
travelling for 14 billion years through
empty space before it was finally
captured by our camera lens.**

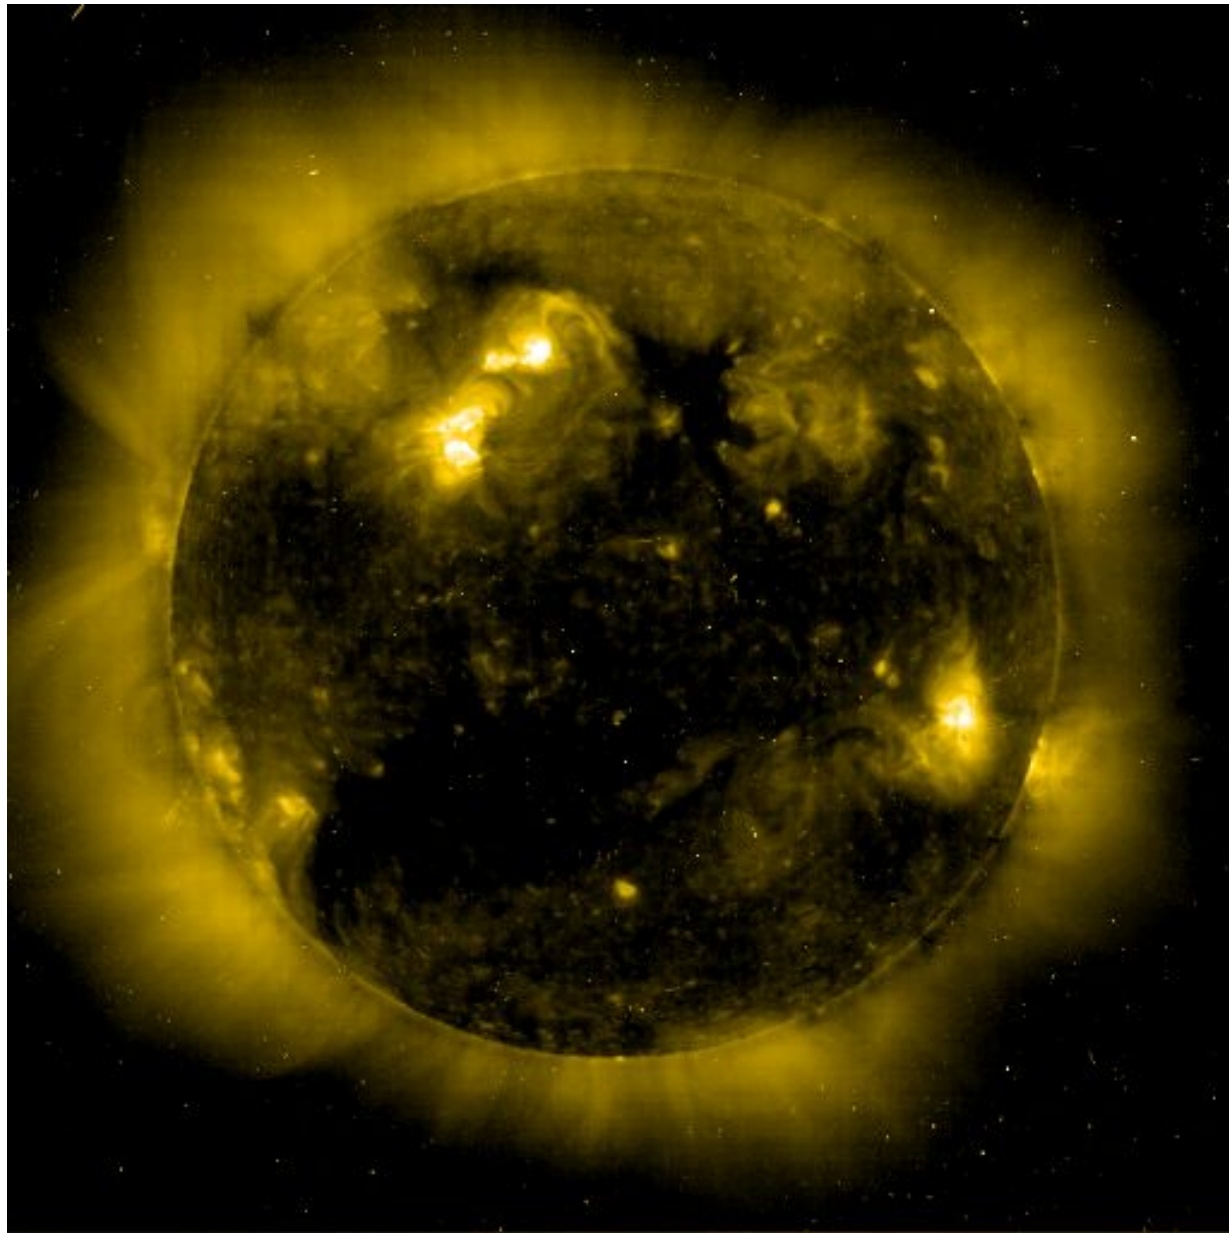

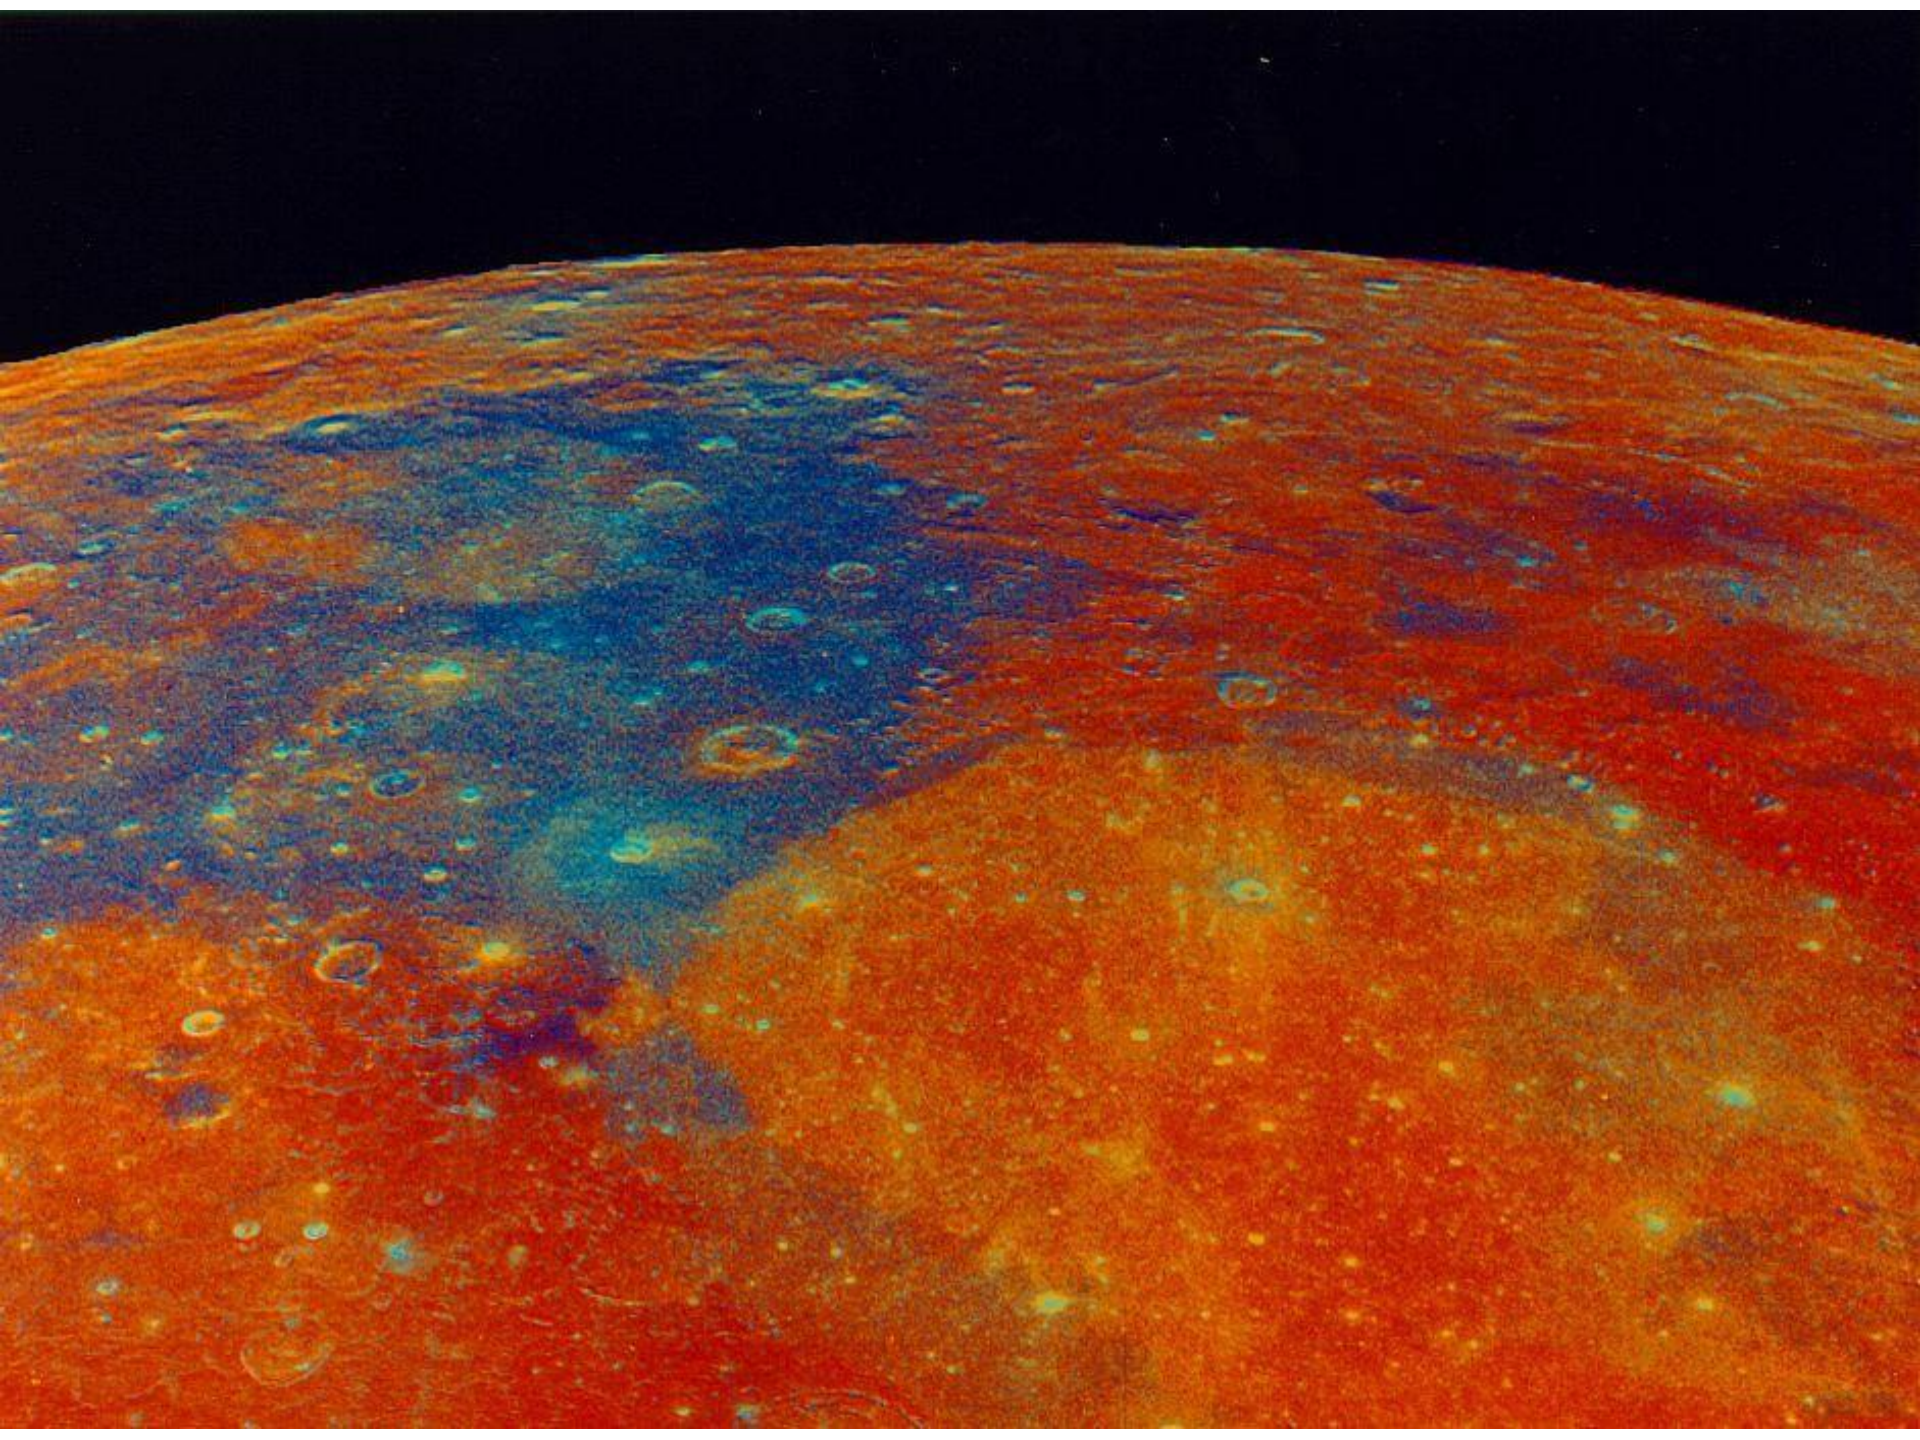

The Two Schools of Philosophy

Realism (Materialism)

Mind comes from matter

As the unit mind
is the highest point
in this entire creation,
the most evolved mind
has the right to dominate
all other material objects

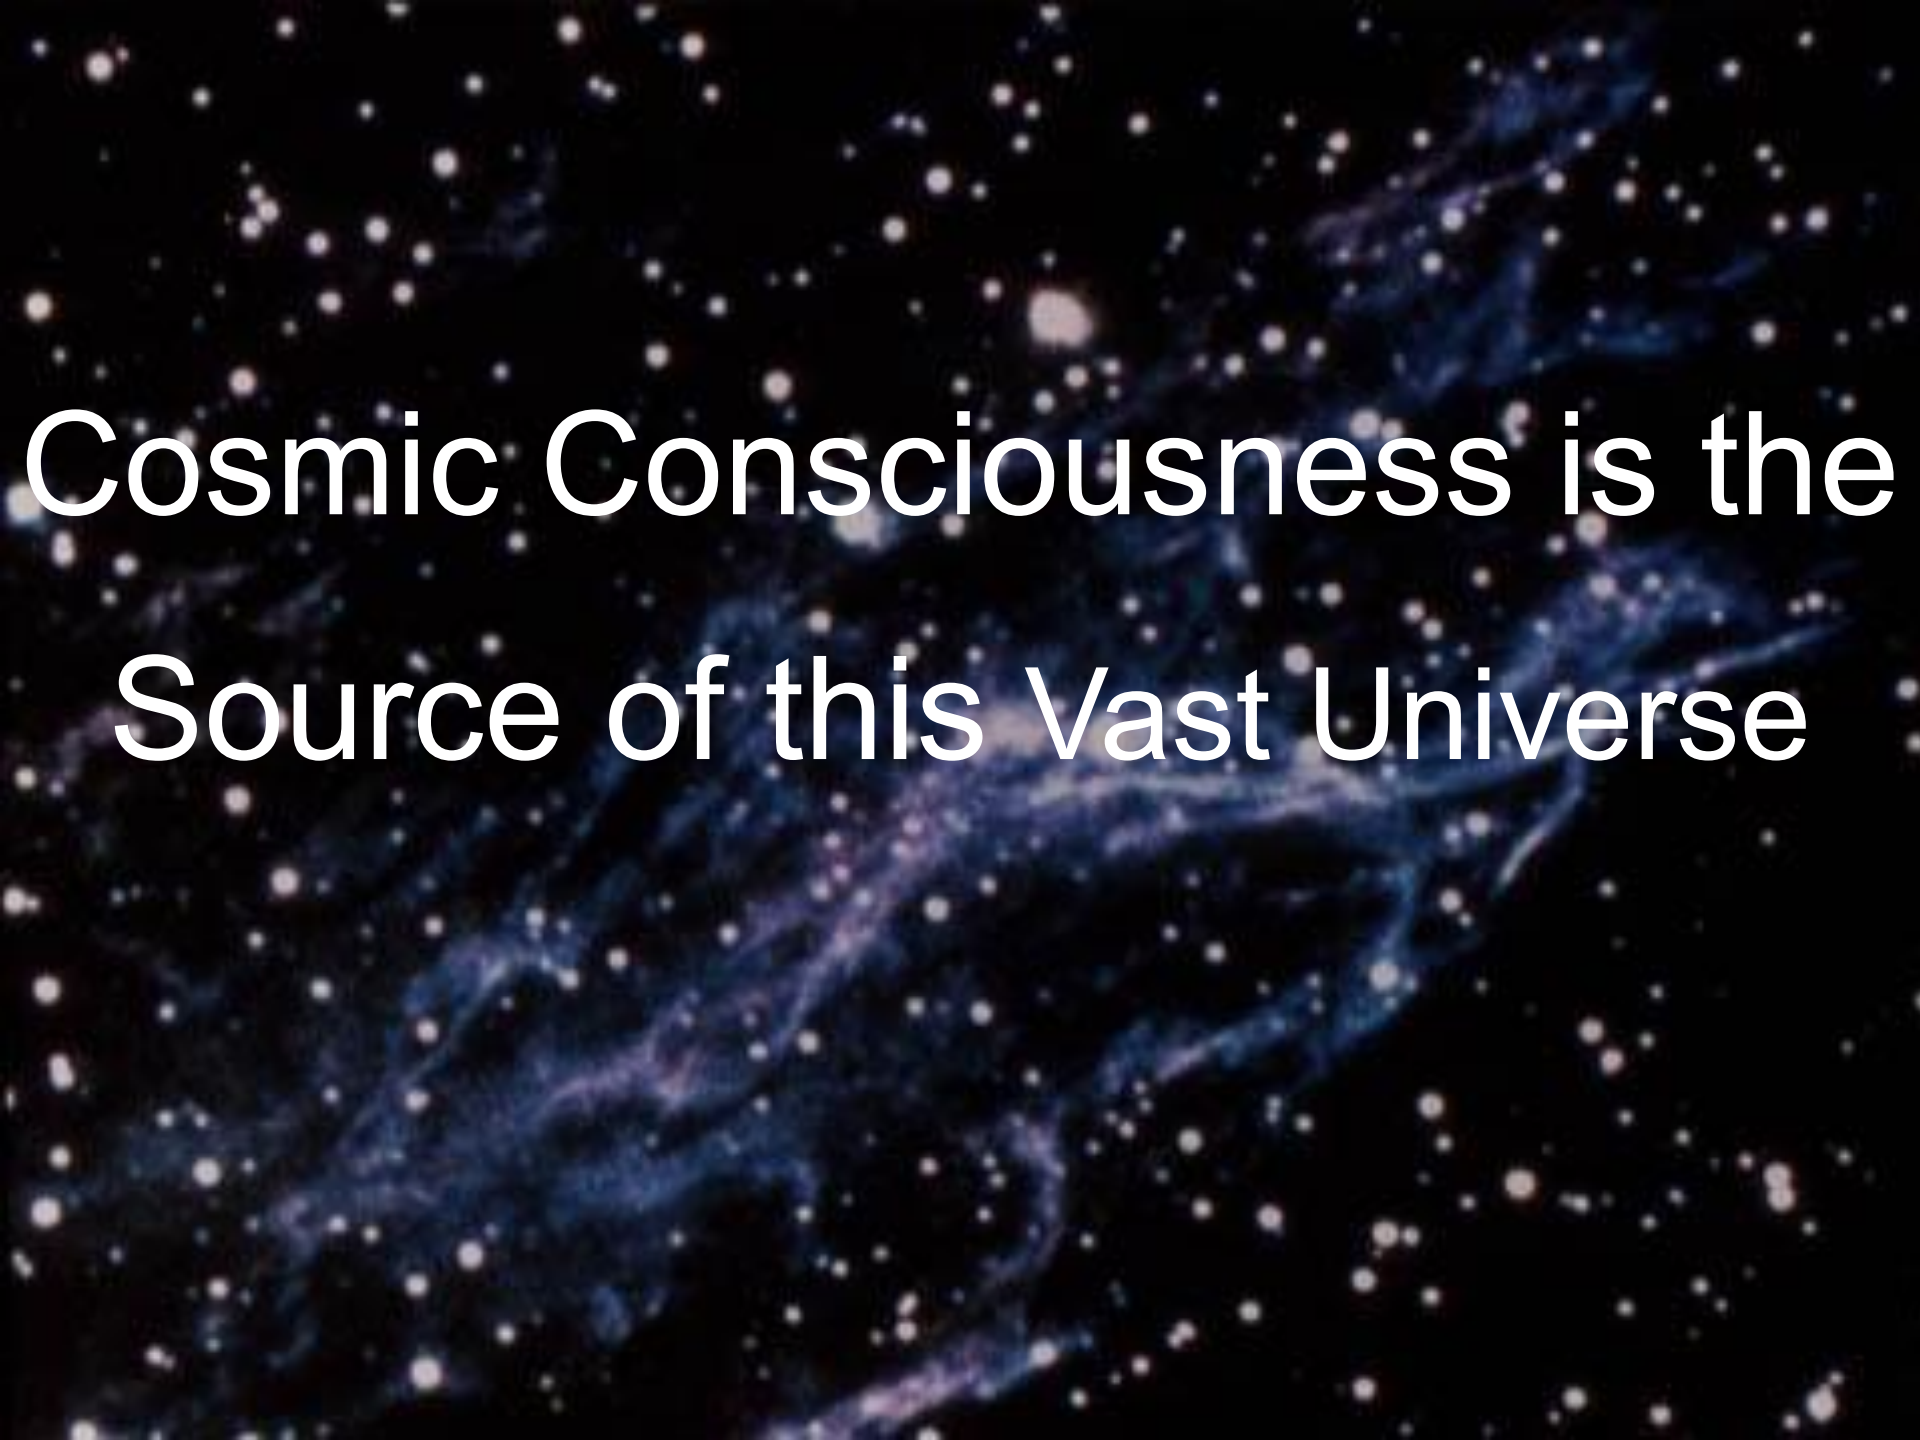

Anti-Realism (Idealism)

Matter comes from mind

As all of the material objects
are creations inside of the mind,
they should be treated
as some sort of illusion
and not taken seriously

microwits

matter comes from the Supreme Mind
and the unit mind comes from matter

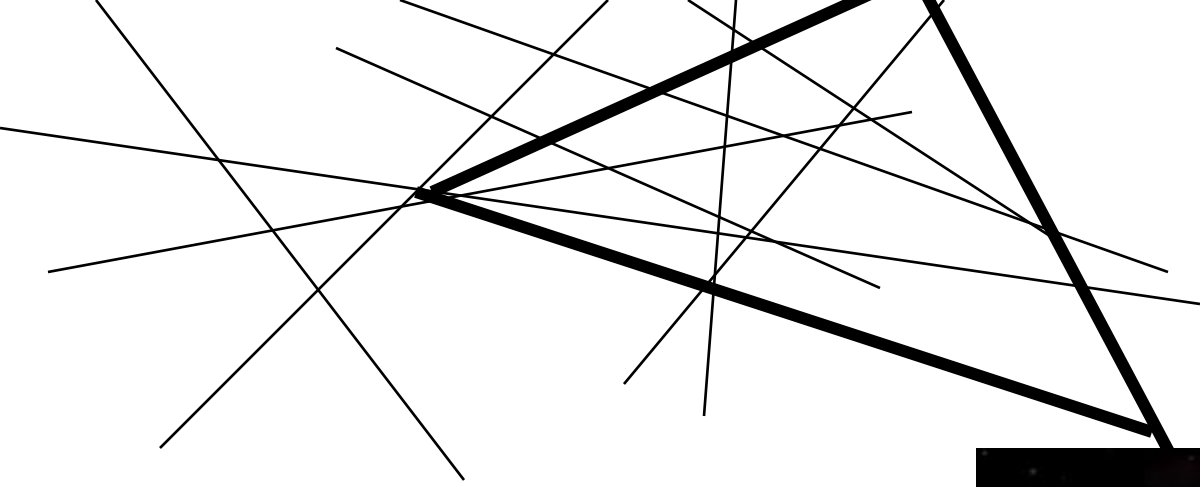

The background of the image is a deep space scene filled with numerous small, bright white stars of varying sizes. Interspersed among the stars are wispy, ethereal clouds of blue and purple light, resembling nebulae or the cosmic web. The overall tone is dark and mysterious, with the light from the stars and nebulae providing a sense of depth and vastness. The text is centered and written in a clean, white, sans-serif font, which stands out clearly against the dark background.

Cosmic Consciousness is the
Source of this Vast Universe

It is important here to mention that matter is not just bound up energy, but Consciousness bound by energy

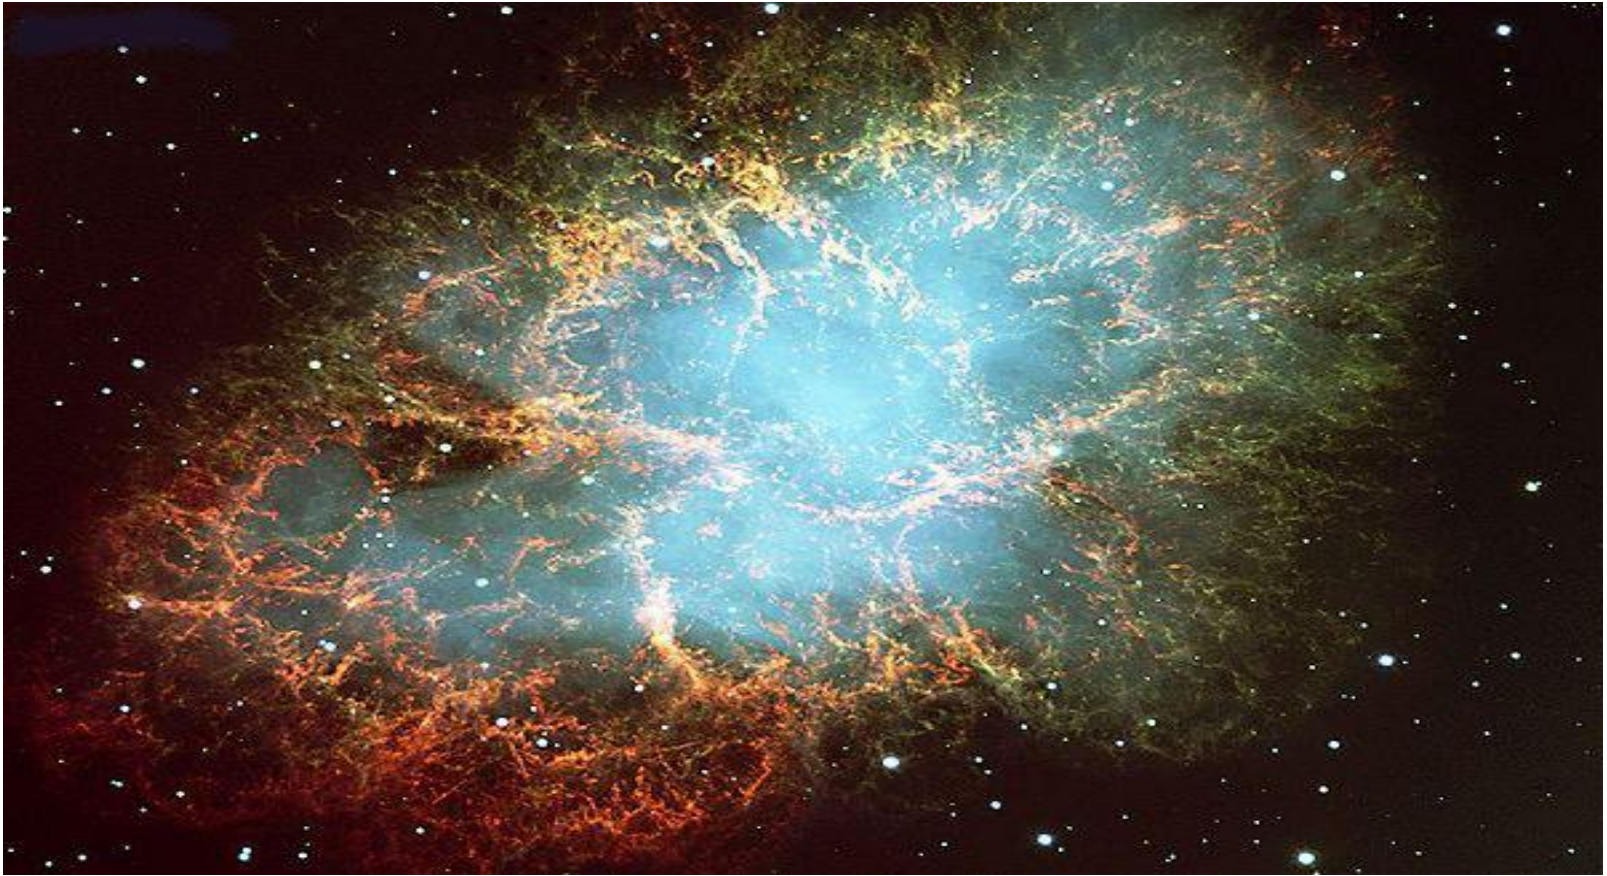

This is the eternal play between Cosmic Consciousness and Cosmic Energy otherwise known as Shiva and Shakti

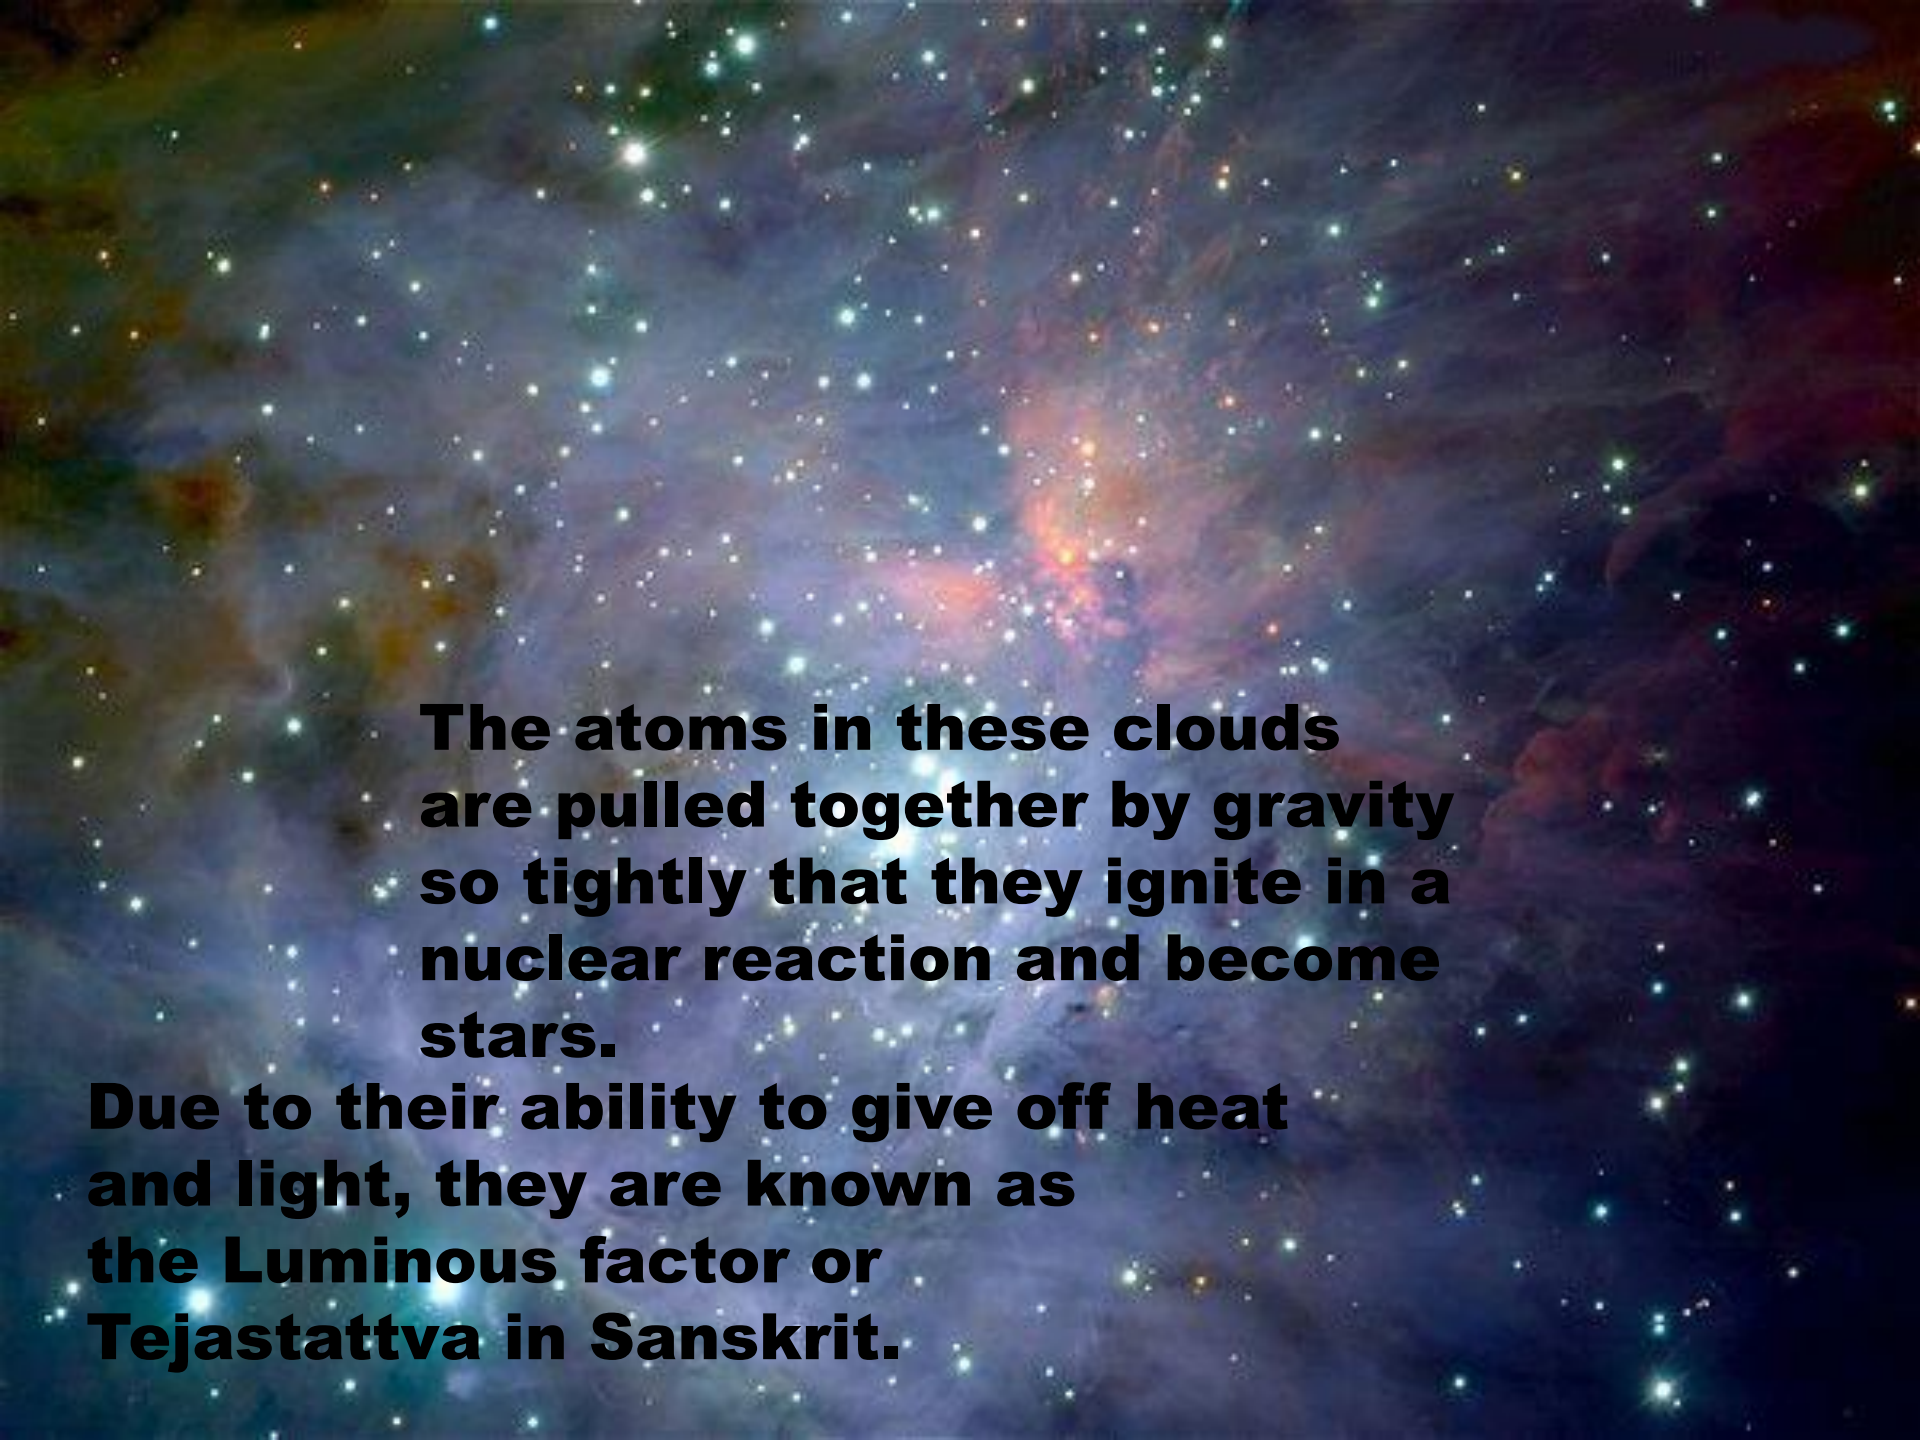

**From the Oneness emerges a factor
called the Ether
The name in Sanskrit is Ákáshatattva.**

Once the elementary particles emerge from the void the combine to form atoms such as hydrogen. The hydrogen comes together to form gigantic clouds called Nebulae.

This factor we call the Aerial factor in Latin, or Váyutattva in Sanskrit.

**The atoms in these clouds
are pulled together by gravity
so tightly that they ignite in a
nuclear reaction and become
stars.**

**Due to their ability to give off heat
and light, they are known as
the Luminous factor or
Tejastattva in Sanskrit.**

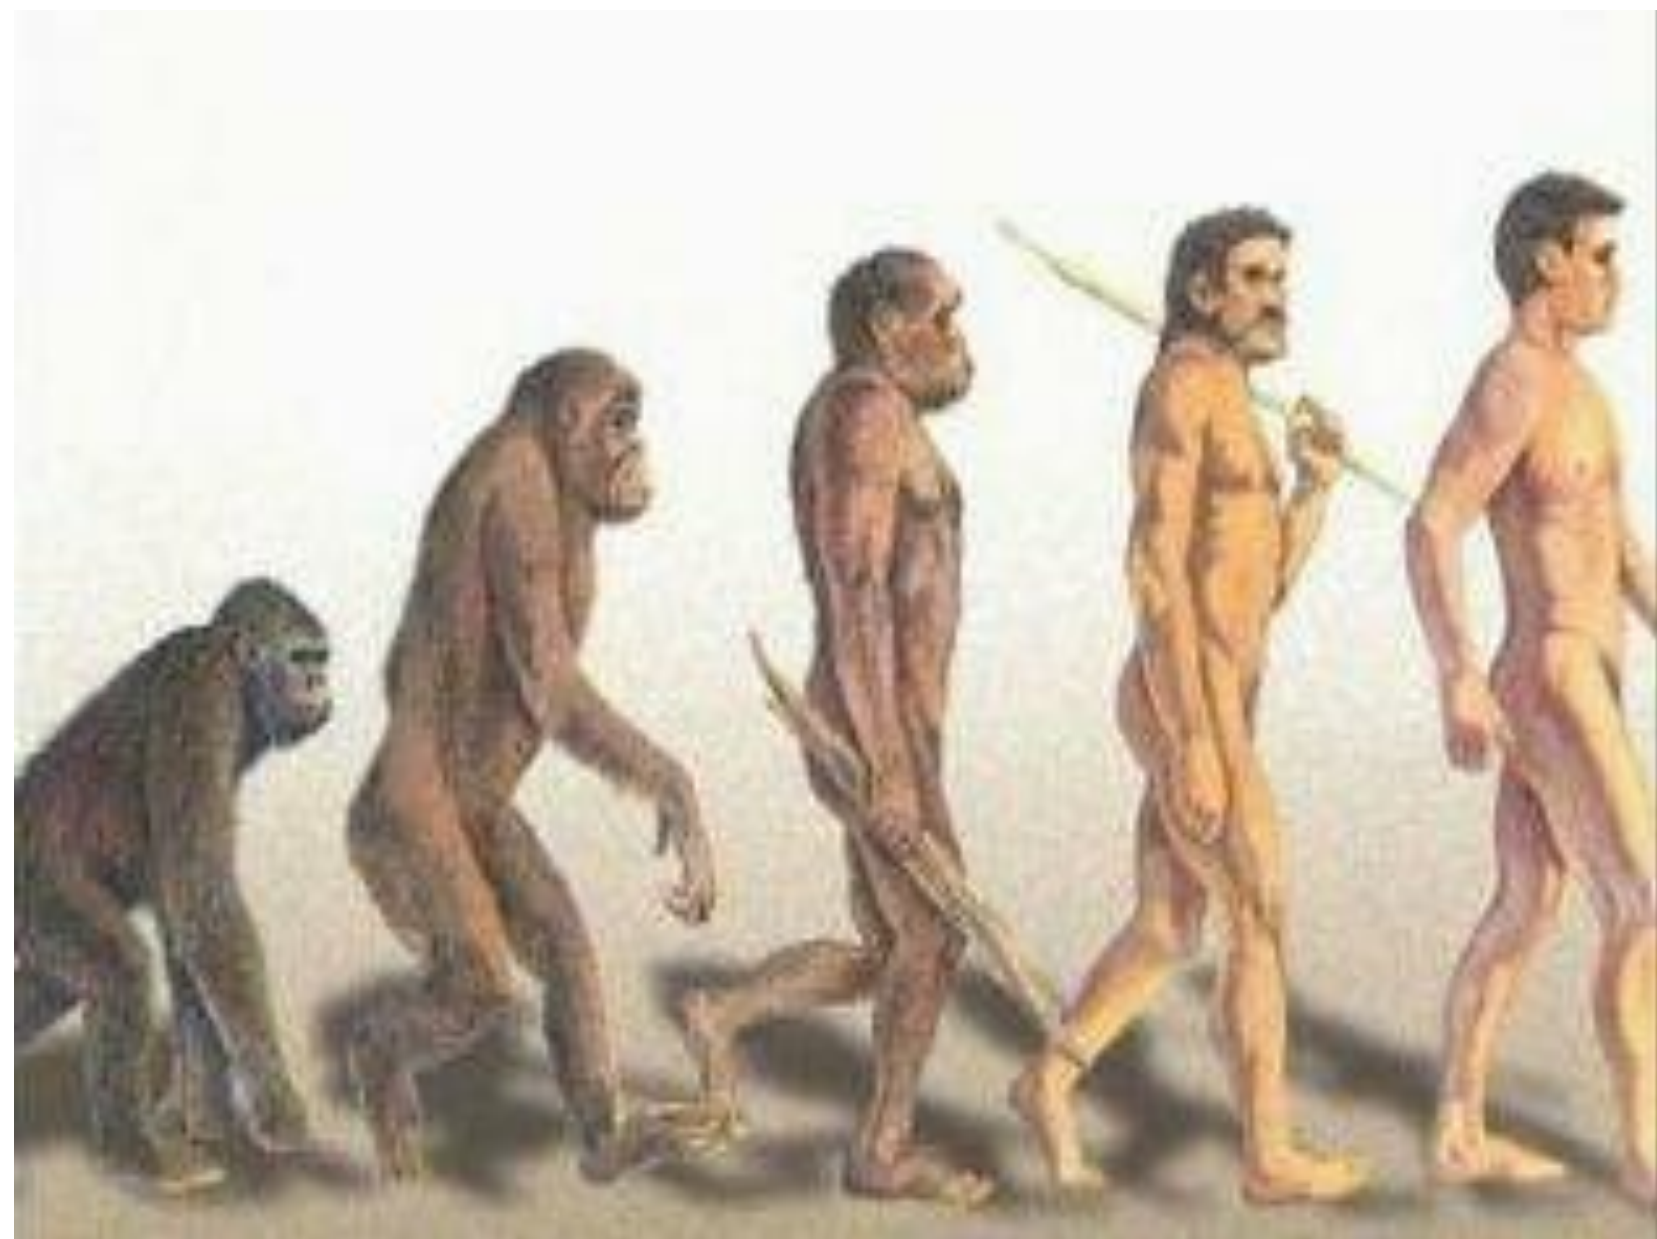

An indication of the level of the evolutionary advancement is, in the complexity of the brain and of the endocrine system

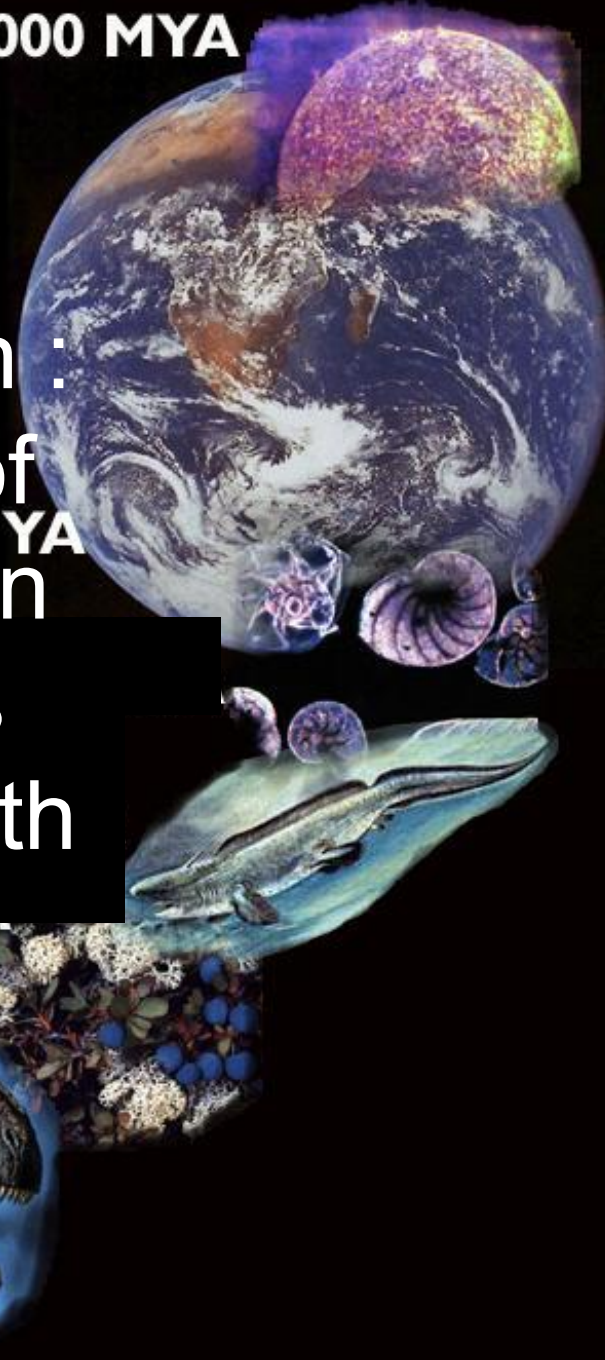

A more complex mind will require more subtle exchanges with the environment.

Brahmacakra

Theory of evolution :
not only survival of
the fittest: evolution
of consciousness
towards reunion with
Brahma

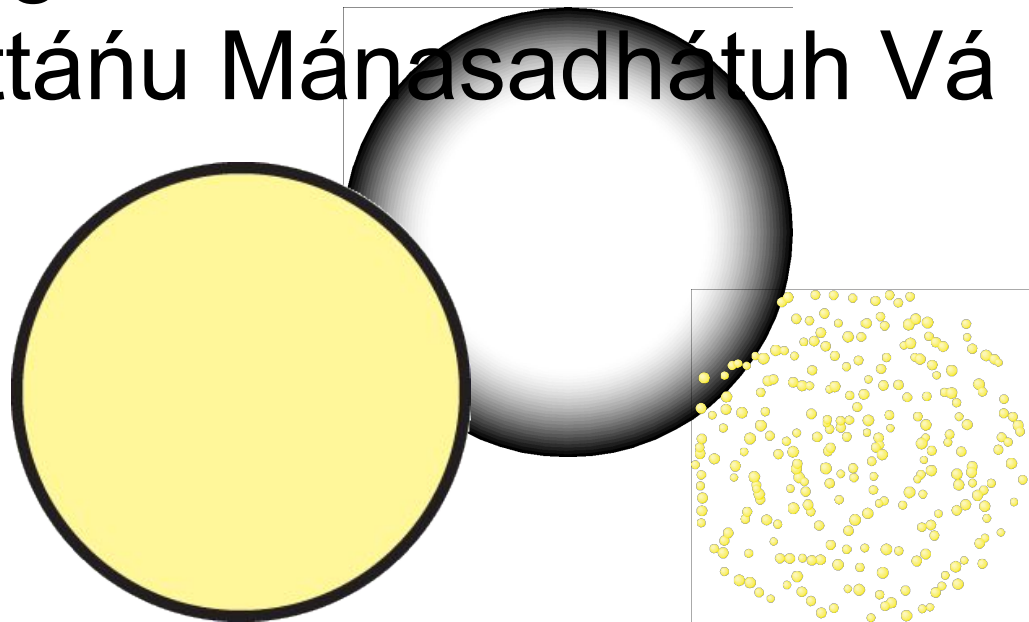

Who am I?

Do I have **Mind**?

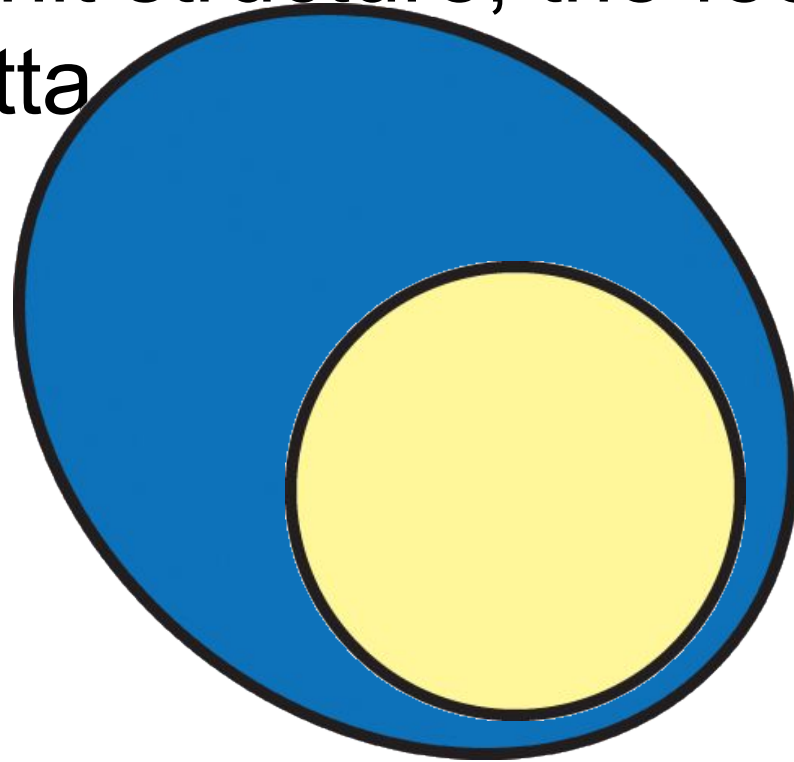

What is **Mind**?

“Dyaśtīdehe Cittāñusamavāyaena
Due to excessive clash within the unit
structure, some Cittābodha
and cittāñu, or mind stuff, is evolved.”
“Through the combination of ectoplasmic
particles in the unit structure, the feeling of
citta evolves”

Tiivrasauñgharśeña Cúrñibhútāni
Jad'āni Cittāñu Mānasadhātuh Vā

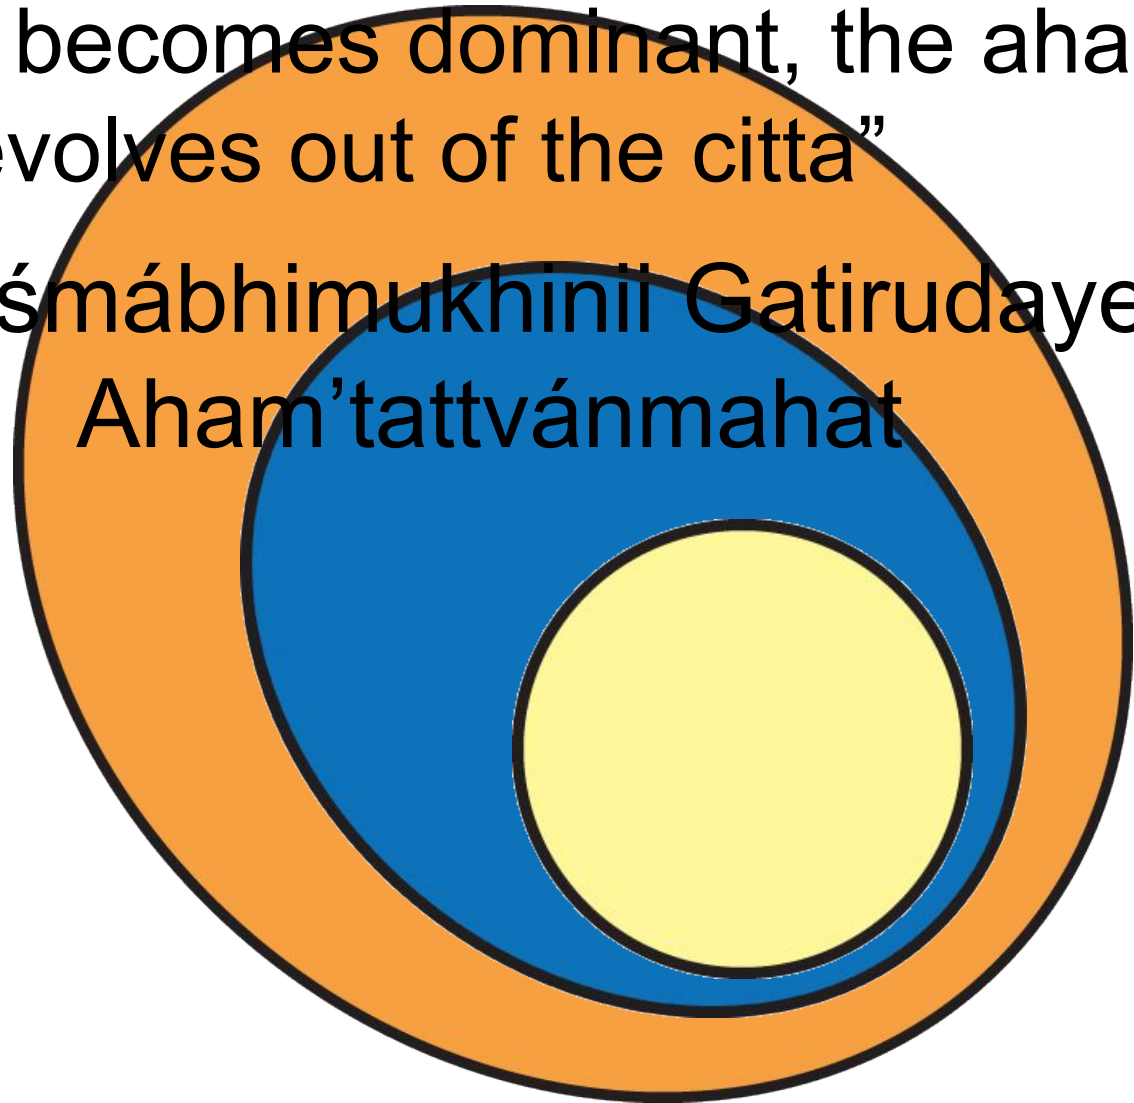

“As the influence of the guñas wanes and
Cittāt: Guṇāvakṣaye Rajoguṇaprābalye Aham
rajo guṇa becomes dominant, the aham
“Through the combination of ectoplasmic
evolves out of the citta
particles in the unit structure, the feeling of
citta

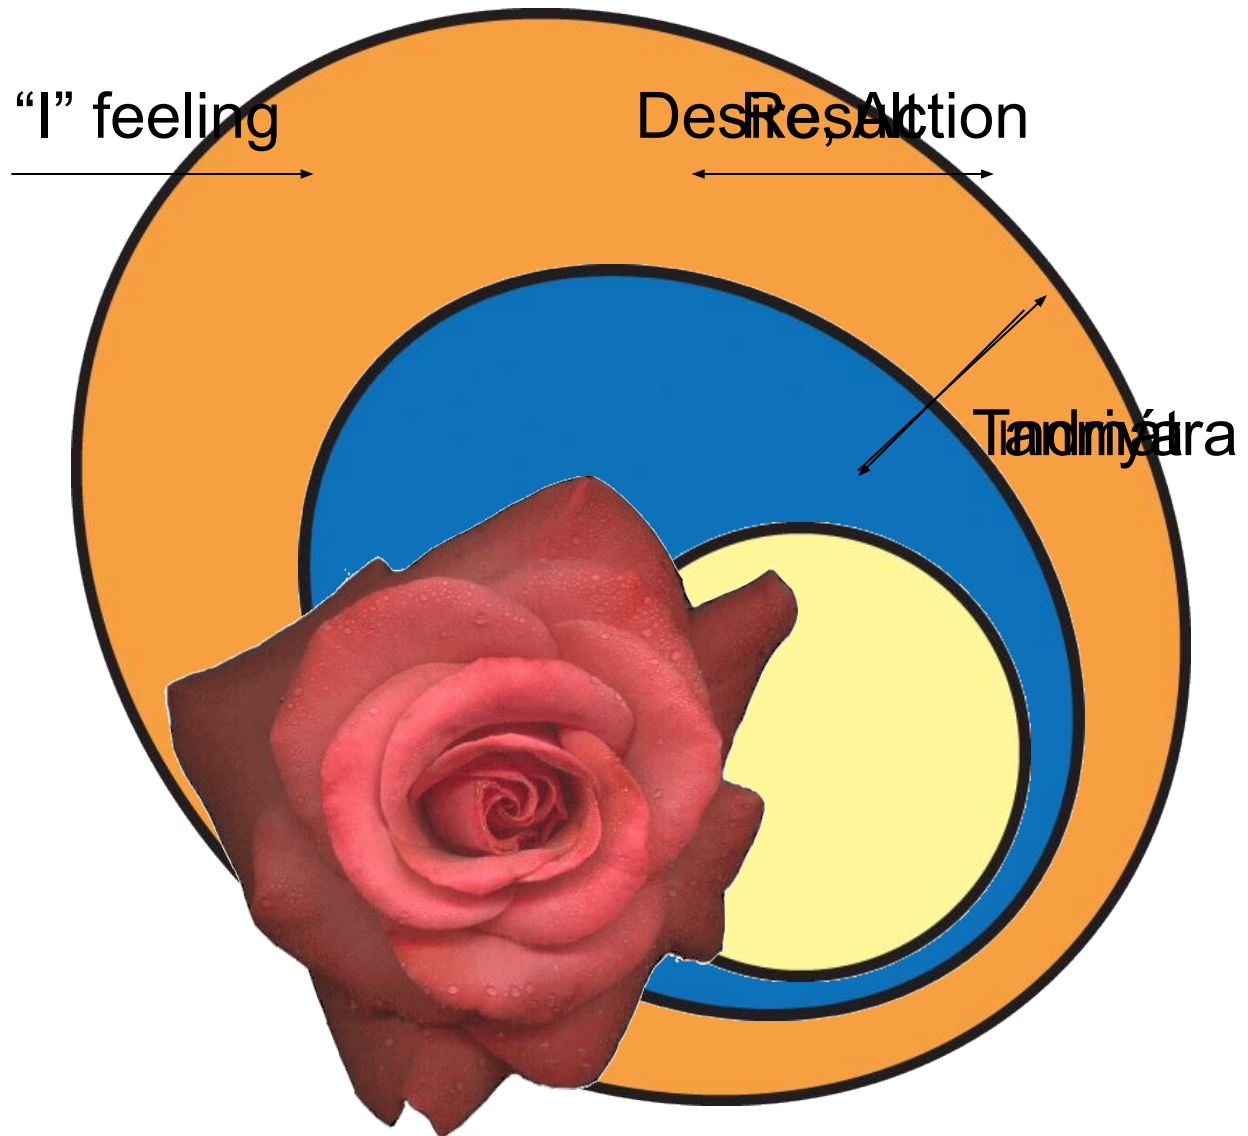

“As the influence of the guñas wanes and
rajoguña becomes dominant, the aham
evolves out of the citta”

Súkśmábhimukhinī Gatirudaye
Aham'tattvánmahat

“With further movement towards the subtle,
the mahat evolves out of the aham’tattva”

In the same way, the highest point of evolution of a human being is to become a living embodiment of that source of Oneness.

Brahmacakra

“All living beings seek happiness”
