Gardening - intensive agriculture, which belongs to the cultivation of vegetable crops

accbud.ua

ACC 6ya

Independent branch of gardening is viticulture

Vegetables and berries are valuable food

Protection of fruit from pests and diseases

One of the important measures to ensure the productivity, improve the quality плодоягодной product, ensuring the long-term productivity of perennial plants is the integrated protection of fruit and berry crops from pests and diseases.

For biological peculiarities, as well as the type of fruit and fruit-berry cultures share on the following groups:

1) fruits (Apple, pear, quince, apricot, mountain ash);

2) fruits (cherries, cherry, plum, apricot, peach, cherry plum);

3) nuts (walnut, hazel, filbert);

4) berries (strawberry, raspberry, currant, gooseberry)

5) grape (grapes);

6) citrus (lemon, orange, grapefruit, Mandarin)

All fruit and berry crops -
perennial, but with different
periods of life - pear 40-100
years, cherry 20-30, strawberry
4-8 years.
